Load Feeders, Motor Starters and Soft Starters

Introduction

Overview

	Order No.	Page
3RW soft starters		
<i>For standard applications</i>		
3RW30, 3RW31	• Application areas - Fans - Building/construction machines - Escalators - Air conditioning systems - Assembly lines - Operating mechanisms	3RW30, 3RW31 6/5
3RW40	• SIRIUS 3RW40 soft starters with the integral functions - solid-state motor overload and intrinsic device protection and - adjustable current limiting for the soft starting and stopping of three-phase asynchronous motors • Performance range from 75 to 250 kW (at 400 V)	3RW40 6/12
<i>For high-feature applications</i>		
3RW44	• Application areas - Pumps - Compressors - Industrial refrigerating systems - Conveying systems - Machine tools	3RW44 6/15
3RA fuseless load feeders		
3RA11 direct-on-line starters	• The 3RA1 fuseless load feeders consist of the 3RV1 motor starter protector and the 3RT1 contactor. The motor starter protector and contactor are prewired and mechanically connected in pre-assembled installation sets (link modules, wiring sets and standard mounting rail or busbar adapters). The motor starter protector and contactor are mechanically and electrically connected by means of the link module • 4 sizes (S00, S0, S2, S3) • Can be supplied for direct start or reversing duty as - complete unit or - single devices for self-assembly	
For snapping onto standard mounting rails or for screw mounting	• Rated control supply voltage 50 Hz 230 V AC and 24 V DC for 35 mm standard mounting rail or screw mounting	3RA11 6/26
For busbar systems	• Rated control supply voltage 50 Hz 230 V AC and 24 V DC for 40 mm and 60 mm busbar systems	3RA11 6/30
3RA12 reversing starters		
For snapping onto a standard mounting rails or for screw mounting	• Rated control supply voltage 230 V AC, 50 Hz and 24 V DC for 35 mm standard mounting rail or screw mounting	3RA12 6/34
For busbar systems	• Rated control supply voltage 50 Hz 230 V AC and 24 V DC for 40 mm and 60 mm busbar systems	3RA12 6/38
Infeed system		
3RV19 infeed system	• Convenient means of energy supply and distribution	3RV19 6/48
3RA71 load feeders with safety integrated		
Fuseless load feeders	• Safe load feeders for direct start • Actuating voltage 230 V AC, 50/60 Hz • Actuating voltage 24 V DC	3RA71 6/52
Fused load feeders	• Safe load feeders for direct start • Actuating voltage 230 V AC, 50/60 Hz • Actuating voltage 24 V DC	3RA71 6/56

Load Feeders, Motor Starters and Soft Starters

Introduction

	Order No.	Page
AS-Interface motor starters and soft starters		
IP65/67 motor starters and load feeders		
AS-Interface compact starters, IP65 (400 V AC)	• Completely factory-wired load feeders with degree of protection IP65, designed for switching and protecting any type of three-phase loads, in particular standard induction motors in direct-on-line or reversing duty	3RK1 322 6/57
AS-Interface motor starters, IP67 (24 V DC)	• For the lowest performance range up to 70 W, 24 V DC motors and the associated sensor technology can also be directly and locally connected to AS-Interface quickly and easily. Three different versions are available: - Single direct-on-line starter - Double direct-on-line starter - Reversing starter	3RK1 400-1 6/60
IP20 motor starters and load feeders		
Direct-on-line starters for busbar systems		
Reversing starters for busbar systems	• Quick and cost-effective connection of motor starters to higher-level automation systems • For busbar systems with a busbar center-to-center clearance of 40 mm and 60 mm • Completely factory-wired and adaptable to busbar systems	3RA51 6/64 3RA52 6/66
ET 200S motor starters		
ET 200S motor starters	• Completely factory-wired motor starters for switching and protecting any three-phase loads, optionally as direct-on-line, reversing or soft starters	3RK1 301 6/69
Power modules for ET 200S motor starters	• For supplying and monitoring the auxiliary voltages for motor starters	3RK1 903-0BA00 6/76
Terminal modules for ET 200S motor starters	• Mechanical modules in which the motor starter and expansion modules are inserted	3RK1 903 6/77
Interface/solid-state modules	• Interface modules, power modules, reserve modules, digital/analog solid-state modules, F power and F solid-state modules, F terminal modules, 4 IQ-Sense sensor module, SSI module, 1 STEP step module, positioning modules, counter modules, terminal modules for power and solid-state modules	6ES7 1 6/81
ET 200S Safety motor starters Solutions local/PROFIsafe		
ET 200S Failsafe motor starters	• High Feature direct-on-line and reversing starters	3RK1 301 6/95
Safety modules local	• For safety category 4 according to EN 954-1	3RK1 903 6/97
Safety modules PROFIsafe	• Sensor and actuator assignment are freely configurable (distributed safety concept)	3RK1 903 6/102
ET 200pro motor starters		
ET 200pro motor starters	• Standard and High Feature	3RK1 304 6/105
ET 200pro isolator modules	• With switch disconnector function for safe disconnection	3RK1 304 6/107
Safety modules local	• Isolator module and 400 V disconnecting module	3RK1 304 6/108
Accessories for ET 200pro motor starters	• Interface, expansion and power modules	6ES7 1 6/109
ET 200X motor starters		
ET 200X motor starters	• For switching and protection of any three-phase loads • Direct-on-line or reversing starters, electromechanical or solid-state	3RK1 300 6/117
Basic and expansion modules	• Intelligent basic modules, ECOFAST basic modules, PM 148 power module, digital/analog expansion modules, PM 148-P pneumatic module, PM 148-P pneumatic interface	6ES7 14 6/121
ECOFAST motor starters and soft starters		
3RK1 3 ECOFAST motor starters and soft starters	• Distributed motor starters for PROFIBUS and AS-Interface • Functionality ranges from direct-on-line starters, through reversing starters and soft starters as far as frequency converters	3RK1 3 6/128
3RE encapsulated starters		
3RE10 direct-on-line starters	• The 3RE1 encapsulated starters are used for switching and for the inverse-time delayed protection of load feeders up to 22 kW at 400 V AC • The starters are available as direct-on-line starters for motors with a single direction of rotation and as reversing starters for motors with two directions of rotation	3RE10 6/130
3RE13 reversing starters	• Molded-plastic enclosure, degree of protection IP65, including contactor assembly	3RE13 6/131
Accessories	• Molded-plastic enclosure, degree of protection IP65, for direct-on-line and reversing starters	3RE19 6/132

3RW Soft Starters

General data

Overview

The advantages of the SIRIUS soft starters at a glance:

- Soft starting and smooth ramp-down¹⁾
- Stepless starting
- Reduction of current peaks
- Avoidance of mains voltage fluctuations during starting
- Reduced load on the power supply network

- Reduction of the mechanical load in the operating mechanism
- Considerable space savings and reduced wiring compared with conventional starters
- Maintenance-free switching
- Very easy handling
- Fits perfectly in the SIRIUS modular system

- ✓ Function is available
-- Function not available.

1) Only soft starting available for 3RW30 ..-1AA12 and 3RW31.

2) Not available for 3RW30 03.

3) Not possible in inside-delta circuit.

4) Trace function with Soft Starter ES software.

5) For 3RW30 03 up to 230 V.

6) Calculate soft starter and motor with size allowance where required.

More information can be found on the Internet at
<http://www.siemens.com/softstarter>

3RW30, 3RW31 for standard applications

Overview

Various versions of the SIRUS 3RW30/31 soft starters are available:

- Standard version for fixed speed three-phase motors, sizes S00, S0, S2 and S3
- Version for fixed-speed three-phase motors in a 22.5 mm enclosure
- Special version 3RW31 for Dahlander motors only in size S0
- Version for soft starting single-phase motors of sizes S0, S2 and S3.

SIRIUS 3RW30/31 for three-phase motors

Soft starters rated up to 55 kW (at 400 V) for standard applications in three-phase networks. Extremely small sizes, low power losses and simple commissioning are just a few of the many advantages of this soft starter. The special feature of the 3RW31 series is that it allows independent definition of two separate acceleration ramps (Dahlander motors).

SIRIUS 3RW30 for single-phase motors

The additional version for standard applications in single-phase networks. Its voltage ramp function reduces the motor's inrush current and effectively lowers the torque at the point of starting up. The load and the supplying network are thus protected.

Application

The SIRIUS 3RW30/31 solid-state soft starters are suitable for soft starting and stopping of three-phase asynchronous machines.

Due to two-phase control, the current is kept at minimum values in all three phases throughout the entire starting time. Due to continuous voltage influencing, current and torque peaks, which are unavoidable in the case of wye-delta starters, for instance, do not occur.

Application areas

- Fans
- Pumps
- Building/construction machines
- Presses
- Escalators
- Transportation systems
- Air conditioning systems
- Fans
- Assembly lines
- Compressors and coolers
- Operating mechanisms

¹⁾ Rated control supply voltage U_s 110 ... 230 V AC/DC.

Note:

Selection of the soft starter depends on the motor rated current.

The SIRIUS 3RW3 solid-state soft starters are designed for easy starting conditions. $J_{Load} < 10 \times J_{Motor}$. In the event of deviating conditions or increased switching frequency, it may be necessary to choose a larger device. Siemens recommends the use of the selection and simulation program Win-Soft Starter. For information about rated currents for ambient temperatures > 40 °C, see Technical Information LV 1 T.

3RW30, 3RW31
for standard applications

More information

Configuration

The 3RW solid-state motor controllers are designed for easy starting conditions. In the event of deviating conditions or increased switching frequency, it may be necessary to choose a larger device. For accurate dimensioning, use the Win-Soft Starter selection and simulation program.

If necessary, an overload relay for heavy starting must be selected where long starting times are involved. PTC sensors are recommended. This also applies for the smooth ramp-down because during the ramp-down time an additional current loading applies in contrast to free ramp-down.

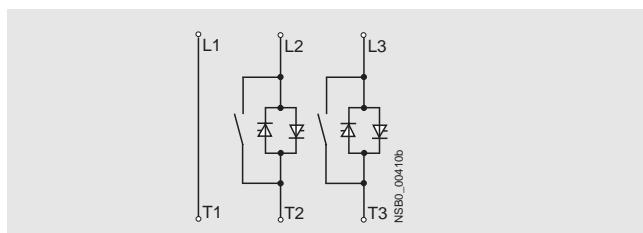

In the motor feeder between the SIRIUS 3RW soft starter and the motor, no capacitive elements are permitted (e.g. no reactive-power compensation equipment). In addition, neither static systems for reactive-power compensation nor dynamic PFC (Power Factor Correction) must be operated in parallel during starting and ramp-down of the soft starter. This is important to prevent faults arising on the compensation equipment and/or the soft starter.

All elements of the main circuit (such as fuses, controls and overload relays) should be dimensioned for direct starting, following the local short-circuit conditions. Fuses, switching devices and overload relays must be ordered separately. Please observe the maximum switching frequencies specified in the technical specifications (see Technical Information LV 1 T).

Note:

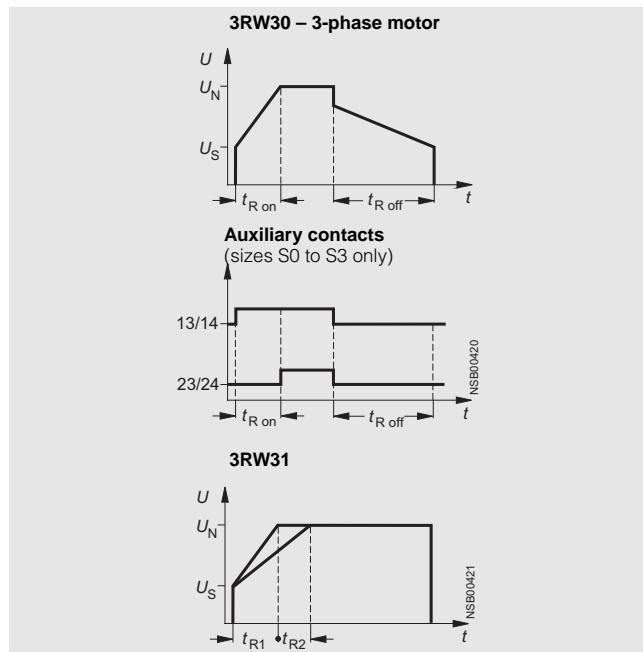

When induction motors are switched on, voltage drops occur as a rule on starters of all types (direct starters, wye-delta starters, soft starters). The infeed transformer must always be dimensioned such that the voltage dip when starting the motor remains within the permissible tolerance. If the infeed transformer is dimensioned with only a small margin, it is best for the control voltage to be supplied from a separate circuit (independently of the main voltage) in order to avoid the potential switching off of the soft starter.

Power electronics circuit diagram¹⁾

¹⁾ Schematic circuit diagram applies to sizes S0 and S2; for size S00, phase L3 is bridged; for size S3, phase L2 is bridged.

Status graphs

Control with a PLC

When a 3RW30 is operated with a triac output or thyristor output, the leakage current at the PLC output should be < 1 mA because otherwise the 3RW30 will interpret the resultant voltage drop at the input as an "On command". As a corrective measure for PLC outputs with a higher leakage current, an RC element with > 100 nF and 220 W can be connected in series between "IN1" and terminal "A2" of the 3RW30 (Order No.: 3TX7 462-3T see Selection and Ordering Data).

Win-Soft Starter selection and simulation program

With this software, you can simulate and select all Siemens soft starters, taking into account various parameters such as mains properties, motor and load data, and special application requirements.

The software is a valuable tool, which makes complicated, lengthy manual calculations for determining the required soft starters superfluous.

You can order the CD-ROM under the following order number: Order No.: E20001-D1020-P302-V2-7400.

You can find more information on the Internet at:
<http://www.siemens.com/softstarters>

3RW Soft Starters

3RW40 for standard applications

Overview

SIRIUS 3RW40 soft starters have all the same advantages as the 3RW30/31 soft starters. At the same time, they come with additional functions, e.g. solid-state motor overload and intrinsic device protection and adjustable current limiting, as well as a two-phase control method (Polarity Balancing) that is unique in this performance range.

SIRIUS 3RW40 soft starters are part of the SIRIUS modular system. This results in advantages such as identical sizes and a uniform connection method. Thanks to their particularly compact design, SIRIUS 3RW40 soft starters are only half as big as comparable wye-delta starters. Hence they can be mounted in minimum space in the control cabinet. Configuring and mounting are carried out quickly and easily thanks to the 3-wire connection.

SIRIUS 3RW40 for three-phase motors

Soft starters rated up to 250 kW (at 400 V) for standard applications in three-phase networks. Extremely small sizes, low power losses and simple commissioning are just three of the many advantages of the SIRIUS 3RW40 soft starters.

Application

The SIRIUS 3RW40 solid-state soft starters are suitable for soft starting and stopping of three-phase asynchronous motors.

Due to two-phase control, the current is kept at minimum values in all three phases throughout the entire starting time and disturbing direct current components are eliminated in addition. This not only enables the two-phase starting of motors up to 250 kW (at 400 V) but also avoids the current and torque peaks which occur e.g. with wye-delta starters.

Application areas

- Fans
- Pumps
- Building/construction machines
- Presses
- Escalators
- Transport systems
- Air conditioning systems
- Fans
- Assembly lines
- Compressors and coolers
- Operating mechanisms

3RW44 for high-feature applications

Overview

In addition to soft starting and soft ramp-down, the solid-state SIRIUS 3RW44 soft starters provide numerous functions for higher-level requirements. They cover a performance range up to 710 kW (at 400 V) in the inline circuit and up to 1200 kW (at 400 V) in the inside-delta circuit.

The SIRIUS 3RW44 soft starters are characterized by a compact design for space-saving and clearly arranged control cabinet layouts. For optimized motor starting and stopping the innovative SIRIUS 3RW44 soft starters are an attractive alternative with considerable savings potential compared to applications with a frequency converter. The new torque control and adjustable current limiting enable the High Feature soft starters to be used in nearly every conceivable task. They guarantee the reliable avoidance of sudden torque applications and current peaks during motor starting and stopping. This creates savings potential when calculating the size of the switchgear and when servicing the machinery installed. Be it for inline circuits or inside-delta circuits – the SIRIUS 3RW44 soft starter offers savings especially in terms of size and equipment costs.

Combinations of various starting, operating and ramp-down possibilities ensure an optimum adaptation to the application-specific requirements. Operating and commissioning can be performed by means of the user-friendly keypad and a menu-prompted, multi-line graphic display with background lighting. The optimized motor ramp-up and ramp-down can be effected by means of just a few settings with a previously selected language. Four-key operation and plain-text displays for each menu point guarantee full clarity at every moment of the parameterization and operation.

Applicable standards

- IEC 60947-4-2
- UL/CSA

Application

The SIRIUS 3RW44 solid-state soft starters are suitable for the torque-controlled soft starting and smooth ramp-down as well as braking of three-phase asynchronous motors.

Application areas, e.g.

- Pumps
- Fans
- Compressors
- Water transport
- Conveying systems and lifts
- Hydraulics
- Machine tools
- Mills
- Saws
- Breakers
- Mixers
- Centrifuges
- Industrial cooling and refrigerating systems

- 1) 3RW44 2 soft starters. ... 3RW44 4. with screw terminals:
delivery time class A.
- 2) Control by way of the internal 24 V DC supply and direct control
by means of PLC possible.

Note:

Soft starter selection depends on the motor rated current.

The 3RW44 solid-state soft starters are designed for normal starting (Class 10). (Inertia load of the overall operating mechanism $J_{Load} < 10 \times J_{Motor}$; starting current 350 % $\times I_e$ for 20 s similar load). For any other conditions of use, the devices should be selected using the Win-Soft Starter selection and simulation program. See Technical specifications for information about rated currents for ambient temperatures > 40 °C and switching frequency.

* You can order this quantity or a multiple thereof.

More information

Application examples for normal starting (Class 10)

Normal starting Class 10 (up to 20 s with 350 % I_n motor).
The soft starter rating can be selected to be as high as the rating of the motor used

Application	Conveyor belt	Roller conveyor	Compressor	Small fan	Pump	Hydraulic pump
Starting parameters						
• Voltage ramp and current limiting						
- Starting voltage %	70	60	50	30	30	30
- Starting time s	10	10	10	10	10	10
- Current limit value	Deactivated	Deactivated	$4 \times I_M$	$4 \times I_M$	Deactivated	Deactivated
• Torque ramp						
- Starting torque	60	50	40	20	10	10
- End torque	150	150	150	150	150	150
- Starting time	10	10	10	10	10	10
• Breakaway pulse	Deactivated (0 ms)					
Ramp-down mode						
	Smooth ramp-down	Smooth ramp-down	Free ramp-down	Free ramp-down	Pump ramp-down	Free ramp-down

Application examples for heavy starting (Class 20)

Heavy starting Class 20 (up to 40 s with 350 % I_n motor).
The soft starter has to be selected one rating class higher than the motor used

Application	Stirrer	Centrifuge	Milling machine
Starting parameters			
• Voltage ramp and current limiting			
- Starting voltage %	30	30	30
- Starting time s	30	30	30
- Current limit value	$4 \times I_M$	$4 \times I_M$	$4 \times I_M$
• Torque ramp			
- Starting torque	30	30	30
- End torque	150	150	150
- Starting time	30	30	30
• Breakaway pulse	Deactivated (0 ms)	Deactivated (0 ms)	Deactivated (0 ms)
Ramp-down mode			
	Free ramp-down	Free ramp-down	Free ramp-down or DC braking

Application examples for very heavy starting (Class 30)

Very heavy starting Class 30 (up to 60 s with 350 % I_n motor).
The soft starter has to be selected two rating classes higher than the motor used

Application	Large fan	Mill	Breakers	Circular saw/bandsaw
Starting parameters				
• Voltage ramp and current limiting				
- Starting voltage %	30	50	50	30
- Starting time s	60	60	60	60
- Current limit value	$4 \times I_M$	$4 \times I_M$	$4 \times I_M$	$4 \times I_M$
• Torque ramp				
- Starting torque	20	50	50	20
- End torque	150	150	150	150
- Starting time	60	60	60	60
• Breakaway pulse	Deactivated (0 ms)	80 %, 300 ms	80 %, 300 ms	Deactivated (0 ms)
Ramp-down mode				
	Free ramp-down	Free ramp-down	Free ramp-down	Free ramp-down

Note:

These tables present sample set values and device sizes. They are intended only for the purposes of information and are not binding. The set values depend on the application in question and must be optimized during commissioning.

The soft starter dimensions should be checked where necessary with the Win-Soft Starter software or with the help of Technical Assistance.

* You can order this quantity or a multiple thereof.

3RW44 for high-feature applications

Circuit concept

The SIRIUS 3RW44 soft starters can be operated in two different types of circuit.

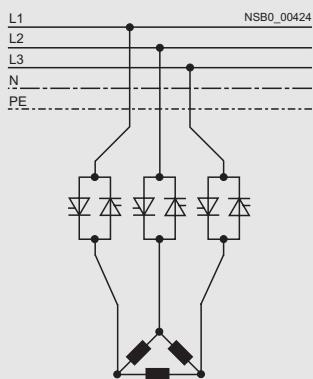

- **Inline circuit**

The controls for isolating and protecting the motor are simply connected in series with the soft starter. The motor is connected to the soft starter with three cables.

- **Inside-delta circuit**

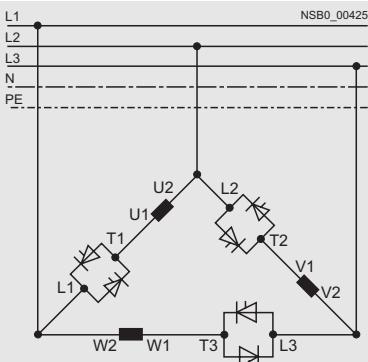

The wiring is similar to that of wye-delta starters. The phases of the soft starter are connected in series with the individual motor windings. The soft starter then only has to carry the phase current, amounting to about 58 % of the motor rated current (conductor current).

Comparison of the types of circuit

Inline circuit:

Rated current I_e corresponds to the motor rated current I_n , 3 leads to the motor

Inside-delta circuit:

Rated current I_e corresponds to approx. 58 % of the rated motor current I_n , 6 cables to the motor (as with wye-delta starters)

Which circuit?

Using the inline circuit involves the lowest wiring outlay. If the soft starter to motor connections are long, this contact sequence is preferable.

With the inside-delta circuit there is double the wiring complexity but a smaller size of device can be used at the same rating.

Thanks to the choice of operating mode select between the inline circuit and inside-delta circuit, it is always possible to select the most favorable solution.

The braking function is possible only in the inline circuit.

Configuration

The 3RW44 solid-state soft starters are designed for normal starting. In case of heavy starting or increased starting frequency, a larger device must be selected.

For long starting times it is recommended to have a PTC thermistor detector in the motor. This also applies for the ramp-down modes smooth ramp-down, pump ramp-down and DC braking, because during the ramp-down time in these modes, an additional current loading applies in contrast to free ramp-down.

In the motor feeder between the SIRIUS 3RW soft starter and the motor, no capacitive elements are permitted (e.g. no reactive-power compensation equipment). In addition, neither static systems for reactive-power compensation nor dynamic PFC (Power Factor Correction) must be operated in parallel during starting and ramp-down of the soft starter. This is important to prevent faults arising on the compensation equipment and/or the soft starter.

All elements of the main circuit (such as fuses and controls) should be dimensioned for direct starting, following the local short-circuit conditions. Fuses, controls and overload relays must be ordered separately.

The harmonic component load for starting currents must be taken into consideration for the selection of motor starter protectors (selection of release).

Note:

When induction motors are switched on, voltage drops occur as a rule on starters of all types (direct starters, wye-delta starters, soft starters). The infeed transformer must always be dimensioned such that the voltage dip when starting the motor remains within the permissible tolerance. If the infeed transformer is dimensioned with only a small margin, it is best for the control voltage to be supplied from a separate circuit (independently of the main voltage) in order to avoid the potential switching off of the soft starter.

Device interface, PROFIBUS DP communications module, Soft Starter ES parameterizing and operating software

The 3RW44 electronic soft starters have a PC interface for communicating with the Soft Starter ES 2006 Smart software or for connecting the external display and operator module. If the optional PROFIBUS communications module is used, the 3RW44 soft starter can be integrated in the PROFIBUS network and communicate using the GSD file or Soft Starter ES 2006 Professional software.

Manual for SIRIUS 3RW44

Besides containing all important information on configuring, commissioning and servicing, the manual also contains example circuits and the technical specifications for all devices.

Win-Soft Starter selection and simulation program

With this software, you can simulate and select all Siemens soft starters, taking into account various parameters such as mains properties, motor and load data, and special application requirements.

The software is a valuable tool, which makes complicated, lengthy manual calculations for determining the required soft starters superfluous.

You can order the CD-ROM under the following order number:
Order No.: E20001-D1020-P302-V2-7400.

General data

Overview***3RA fuseless load feeders***

The 3RA1 fuseless load feeders consist of the 3RV1 motor starter protector and the 3RT1 contactor. Motor starter protectors and contactors are electrically and mechanically connected using pre-assembled sets of components (link modules, wiring sets and standard mounting rail or busbar adapters).

As the 3RA1 fuseless load feeders are constructed from 3RV1 motor starter protectors and 3RT1 contactors, the same accessories can be used for the 3RA fuseless load feeders as for these motor starter protectors and contactors.

Pre-assembled link modules are available as accessories for the power spectrum up to 45 kW. The desired fuseless load feeder can thus be assembled quickly and economically by the customer. A time saving is also achieved in connection with switch-gear acceptances, as – unlike with conventional wiring systems – there is no need to rectify possible wiring errors.

The 3RV1 motor starter protector is responsible for overload and short-circuit protection in the fuseless load feeder. Back-up protective devices, such as melting fuses or limiters, are superfluous here, as the motor starter protector is capable of withstanding short-circuits of up to 50 or 100 kA at 400 V.

The 3RT1 contactor is particularly suitable for extremely complex switching tasks requiring the greatest endurance.

The permissible ambient temperature is 60 °C with butt-mounting and without derating (70 °C possible subject to certain restrictions).

3RA1 fuseless load feeders are available for motors up to 45 kW at AC-3 and 400 V (grounded network) and setting ranges from 0.14 A to 100 A.

3RA1 fuseless load feeders are supplied in four different sizes:

Size	Width mm	Max. rated current $I_{n\ max}$ A	For induction motors up to kW
S00	45	12	5.5
S0	45	25	11
S2	55	50	22
S3	70	100	45

The SENTRON 3VL circuit breakers and the SIRIUS 3RT contactors can be used for fuseless load feeders >100 A. The corresponding distances from grounded or live parts, as detailed in the Technical specifications, must be observed. The selection tables for assemblies up to 250 kW for self-assembly of 400 V, 500 V and 690 V voltages under different start-up conditions (Class 10, 20) can be found in the Technical Information LV 1 T.

Operating conditions

3RA1 load feeders are climate-proof. They are intended for use in enclosed rooms in which no severe conditions (such as dust, caustic vapors, hazardous gases) prevail. Suitable covers must be provided for installation in dusty and damp locations.

Overload tripping times

All 3RA1 fuseless load feeders described here are designed for normal starting, in other words for overload tripping times of less than 10 s (CLASS 10). At rated-load operating temperature the tripping times are shorter, depending on the particular equipment and the setting range. The exact values can be derived from the tripping characteristics of the motor starter protectors.

Types of coordination

EN 60947-4-1 (VDE 0660 Part 102) and IEC 60947-4-1 make a distinction between two different types of coordination, which are designated type of coordination "1" and type of coordination "2". Any short-circuits that occur are cleared safely by both types of coordination. The only differences concern the extent of the damage caused to the device by a short-circuit.

• Type of coordination "1"

The fuseless load feeder may be non-operational after a short-circuit has been cleared. Damage to the contactor or to the overload release is permissible. For 3RA1 load feeders, the motor starter protector itself always achieves type "2" coordination.

• Type of coordination "2"

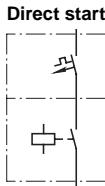

There must be no damage to the overload release or to any other components after a short-circuit has been cleared. The 3RA1 fuseless load feeder can resume operation without needing to be renewed. At most, it is permissible to weld the contactor contacts if they can be disconnected easily without any significant deformation.

3RA Fuseless Load Feeders

3RA11 Direct-On-Line Starters

For load feeders for higher outputs, see table above
(type of coordination "2").

- 1) Selection depends on the concrete startup and rated data of the protected motor.
- 2) Installation kit for standard mounting rail adapter also suitable for screw mounting.
- 3) RH = Reversing duty for standard rail mounting.
- 4) See load feeders with $I_q \geq 100 \text{ kA}$ in the Technical Information LV 1 T.
- 5) Wiring kit necessary: screw mounting with 1 push-in lug each per load feeder is possible; see Accessories for Direct-On-Line and Reversing Starters.
- 6) Mechanical locking device must be ordered separately; see Accessories for Direct-On-Line and Reversing Starters.

3RA Fuseless Load Feeders

3RA12 Reversing Starters

For busbar systems

Selection and ordering data

Rated control supply voltage 50 Hz 230 V AC¹⁾ for 40 and 60 mm busbar systems

- The motor starter protector and contactor are mechanically and electrically connected by means of the link module
- Auxiliary switches²⁾ on the motor starter protector and the contactor can be easily fitted due to the modular system
- Complete unit always with electrical and mechanical interlock

Size	Standard induction motor 4-pole at 400 V AC ³⁾		Setting range for thermal overload release	Consisting of the following single devices			DT	Fuseless load feeders		PU (UNIT, SET, M)	PS*	PG	Weight per PU approx.
	Standard output P kW	Motor current I (guide value) A		Motor starter protector	+ 2 contactors	+ Link module + Assembly kit RS ⁴⁾		Order No.	Price per PU

3RA Fuseless Load Feeders

Infeed System

3RV19 infeed system

Overview

The 3RV19 infeed system is a convenient means of energy supply and distribution for a group of several motor starter protectors or complete load feeders with a screw or spring-type connection system up to size S0.

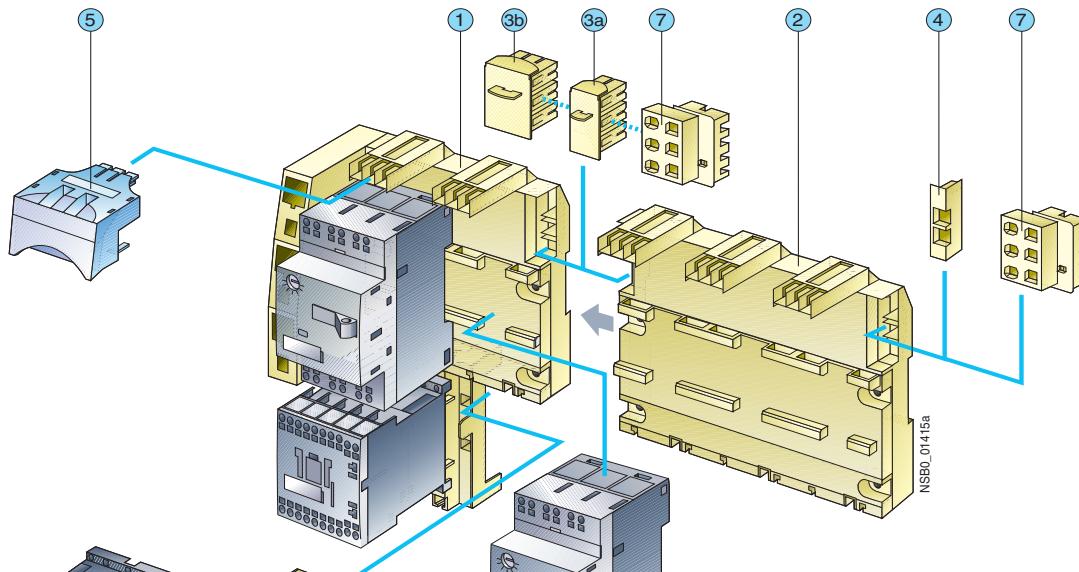

The devices with spring-type connections are available in the SIRIUS modular system up to 5.5 kW at 400 V AC. The motor starter protectors and load feeders with screw terminals for sizes S00 and S0 can also be integrated in the system at the same time.

The system is based on a basic module complete with a lateral incoming unit (3-phase busbar with infeed). This infeed with spring-loaded terminals is mounted on the right or left depending on the version and can be supplied with a maximum conductor cross-section of 25 mm² (with end sleeve). A basic module has two sockets onto each of which a motor starter protector can be snapped.

Expansion modules are available for extending the system (3-phase busbars for system expansion). The individual modules are connected through an expansion plug.

The electrical connection between the 3-phase busbars and the motor starter protectors is implemented through plug-in connectors. The complete system can be mounted on a TH 35 standard mounting rail according to EN 60715 and can be expanded as required up to a maximum current carrying capacity of 80 A.

The system is mounted extremely quickly and easily thanks to the simple plug-in technique. Thanks to the lateral infeed, the system also saves space in the control cabinet. The additional overall height required for the infeed unit is only 30 mm. The alternative infeed possibilities on each side offer a high degree of flexibility for configuring the control cabinet: Infeed on left-hand or right-hand side, ring infeed or infeed on one side and loop-through from the other side to supply further loads are all possible. A terminal block with spring-type connections in combination with a standard mounting rail enables the integration of not only SIRIUS motor starter protectors but also single-phase, 2-phase and 3-phase components such as 5SY miniature circuit breaker or SIRIUS relay components.

3RA Fuseless Load Feeders

Infeed System

3RV19 infeed system

① 3-phase busbars with infeed

A 3-phase busbar with infeed unit is required for connecting the incoming supply. This module comprises one infeed module and 2 sockets which each accept one motor starter protector. A choice of two versions with infeed on the left or right is available. The infeed is connected using spring-type connection. The cage clamp springs permit conductor cross-sections of up to 25 mm² with end sleeves. An end cover is supplied with each module.

② 3-phase busbars for system expansion

The 3-phase busbars for system expansion support expansion of the system. There is a choice of modules with 2 or 3 sockets. The system can be expanded as required up to a maximum current carrying capacity of 63 A. An expansion plug is supplied with each module.

③a Expansion plug

The expansion plug is used for electrical connection of adjacent 3-phase busbars. The current carrying capacity of this plug equals 63 A. One expansion plug is supplied with each 3-phase busbar for system expansion. Additional expansion plugs are therefore only required as spare parts.

③b Extra-wide expansion plug

The extra-wide expansion plug makes the electrical connection between two 3-phase busbars, thus performing the same function as the 3RV19 17-5BA00 expansion plug; the electrical characteristics (e.g. a current carrying capacity of 63 A) are identical.

The 3RV19 17-5E expansion plug is 10 mm wider than the 3RV19 17-5BA00 expansion plug, hence in the plugged state there is a distance of 10 mm between the connected 3-phase busbars. This distance can be used to lay the auxiliary current and control current wiring ("wiring duct"). The motor starter protector and contactor can be wired from underneath, which means that the complete cable duct above the system can be omitted.

④ End cover

The end cover is used to cover the 3-phase busbar at the open end of the system. This cover is therefore only required once for each system. An end cover is supplied with each 3-phase busbar system with infeed. Further end covers are therefore only required as spare parts.

⑤ Plug-in connector

The plug-in connector is used for the electrical connection between the 3-phase busbar and the motor starter protector. There are three different versions:

- One version for 3RV motor starter protectors size S00 with screw terminals
- One version for 3RV motor starter protectors size S0 with screw terminals
- One version for 3RV motor starter protectors size S00 with spring-loaded terminals

⑥ Contactor base

Load feeders can be assembled in the system using the contactor base. The contactor bases are suitable for contactors of size S00 with spring-loaded terminals and are simply snapped onto the 3-phase busbars. Direct-on-line starters and reversing starters are possible. One contactor base is required for direct-on-line starters and two are required for reversing starters. To assemble load feeders for reversing starters, the contactor bases can be arranged either below each other (45 mm overall width) or alongside each other (90 mm overall width). It is important to note that mechanical interlocking of the contactors is only possible when they are arranged vertically.

The infeed system is designed for mounting on a 35 mm standard mounting rail with 7.5 mm overall depth. This standard mounting rail gives the contactor base a stable mounting surface to sit on. If standard mounting rails with a depth of 15 mm are used, the spacer connected to the bottom of the contactor base must be knocked out and plugged into the mating piece that is also on the underside. Then the contactor base also has a stable mounting surface. When standard mounting rails with a depth of 7.5 mm are used, the spacer has no function and can be removed.

As an alternative to using a contactor base, the 3RA19 11-2E electrical link modules can also be used for direct start load feeders of size S00. Motor starter protector and contactor assemblies can then be directly snapped onto the sockets of the 3-phase busbars. For feeders of size S00 and S0, the corresponding 3RA19 11-1.... or 3RA19 21-1.... link modules should generally be used. For size S0, it is only possible integrate direct start load feeders and they must be integrated in the system as complete assemblies.

⑦ Terminal block

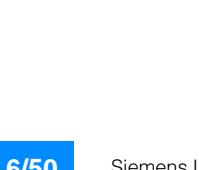

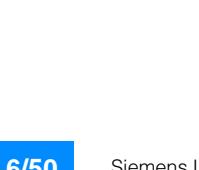

The 3RV19 17-5D terminal block enables the integration of not only SIRIUS motor starter protectors but also single-phase, 2-phase and 3-phase components in addition. Using the terminal block the 3 phases can be fed out of the system; single-phase loads can also be integrated in the system as the result. The terminal block is plugged into the slot of the expansion plug and thus enables outfeeding from the middle or end of the infeed system. The terminal block can be rotated through 180 ° and be locked to the support modules of the infeed system. The 3RV19 17-7B 45 mm standard mounting rail for screwing onto the support plate is available in addition in order to be able to plug the single-phase, 2-phase and 3-phase components onto the infeed system.

8WA2 806								

¹⁾ The expansion plug is included in the scope of supply of the 3RV19 17-4. 3-phase busbars for system expansion.

²⁾ The end cover is included in the scope of supply of the 3RV19 17-1. 3-phase busbars with infeed system.

3RA71 Load Feeders with Safety Integrated

General data Fuseless load feeders

Application

The 3RA71 safety load feeders are offered for direct start. They are available with actuating voltages of 230 V 50/60 Hz (Category 3) and 24 V DC (Categories 3 and 4). Depending on the external circuit, choice of actuator and its position on the machine, Categories 3 or 4 according to EN 954-1 or SIL 2 or 3 (Safety Integrity Level) according to IEC 61508 can be achieved.

Similarly the product range of safety load feeders contains expansion units with and without time delays. These expansion units can only be used in combination with a basic unit. Load feeders can be configured in Stop Category 1 thanks to expansion units with time delays from 0.05 to 3 s, or 0.5 to 30 s.

Types of coordination

EN 60947-4-1 (VDE 0660 Part 102) and IEC 60947-4-1 make a distinction between two different types of coordination, which are designated type of coordination "1" and type of coordination "2". Any short-circuits that occur are cleared safely by both types of coordination. The only differences concern the extent of the damage caused to the device by a short-circuit.

- Type of coordination "2"

There must be no damage to the overload release or to any other component after a short-circuit has been cleared. The 3RA71 fuseless load feeder can resume operation without needing to be renewed. At most, it is permissible to weld the contactor contacts if they can be disconnected easily without any significant deformation. Classification of a machine in categories according to EN 954-1.

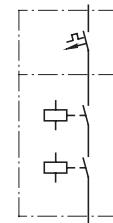

Selection and ordering data

Rated control supply voltage 230 V AC, 50/60 Hz for mounting onto 35 mm standard mounting rail

- Motor starter protectors, contactors and safety electronics pre-wired and certified up to Category 3 according to EN 954-1.
- Auxiliary switches on the motor starter protector and the contactor can be easily fitted thanks to the SIRIUS modular system.

Direct start

AS-Interface Motor Starters and Soft Starters

IP65/67 Motor Starters and Load Feeders

AS-Interface compact starters (400 V AC)

Overview

The AS-Interface compact starter is a load feeder with degree of protection IP65, which is fully prewired inside, for switching and protecting any three-phase loads up to 5.5 kW at 400/500 V AC (electromechanical compact starter) or up to 2.2 kW (solid-state compact starter) – mostly standard induction motors in direct start and reversing duty. It consists either of an electromechanical controlgear combination or a solid-state overload protection and motor starter protector unit. The overload or short-circuit protection is located below a sealable, transparent cover and is therefore available for diagnostics. Two LEDs are provided to the left of the cover for diagnostics purposes for the AS-Interface and the auxiliary power.

It is not possible for live parts to be touched even when the cover is open. The contacts are activated through the integrated outputs. The status of the device is scanned through the inputs, e.g. feedbacks from the auxiliary contacts of the motor starter protector and contactor(s). A further input is used to detect the operating mode of the optional hand-held device. The three power connectors are used to feed and loop through to the load supply voltage (power bus) and to connect to the load itself. Prefabricated power supply cables can be used to connect compact starters which are directly adjacent to each other. Prefabricated power supply lines can be used to connect compact starters which are directly adjacent to each other. The maximum number of starters that can be supplied with one power supply cable is limited by the maximum permissible total current (up to max. 4 mm² corresponds to ~ 35 A).

DS/RS compact starters (electromechanical)

The electromechanical compact starters consist of a conventional controlgear combination with a SIRIUS motor starter protector for protection against short-circuits and overloading and SIRIUS contactor(s) for normal switching. The advantages of the electromechanical starters are the reliable isolation during disconnection and tripping, the integrated fuseless protection against short-circuits and the favorable price. What is more, direct currents can also be switched with the electromechanical starters.

Configuring note:

In the case of temperature-critical applications, we recommend operation in the lower setting range of the motor starter protector.

EDS/ERS compact starters (solid-state)

The solid-state compact starters EDS (direct-on-line starter) and ERS (reversing starter) consist of a solid-state overload relay and a solid-state motor starter protector unit.

The advantages of these solid-state compact starters are the broad limits within which the overload protection can be adjusted (the performance range up to 2.2 kW at 400/500 V AC is covered with just 2 variants), the fact that the motor starter protector units are non-wearing, current measurement (used for monitoring the energy connector), emergency operation in the event of an overload as well as remote resetting via the AS-Interface after overload tripping.

The ERS compact starter is designed for direct start in reversing duty. The solid-state overload protection and the shutdown response in the event of overload can be adjusted directly at the device.

Version with brake contact

All compact starters are available optionally with a separately activated brake contact for electrically operated motor brakes. For externally fed motor brakes, 24 V DC is supplied jointly with the load voltage through the power connector on -X1. It is looped through via -X3 for supplying the next compact starter on -X1. The 24 V DC supply for the brakes is only linked in those devices equipped with a brake contact. At the project configuration stage, it is important to ensure that these starters are located alongside each other.

All compact starters with a brake contact for 500 V DC can be equipped with an 400 V AC brake contact.

Hand-held device

The hand-held device enables the compact starter to be operated locally and autonomously, providing that the auxiliary voltage supply is connected. Thus, assuming that the automation level is functioning correctly, local switching operations can be carried out in addition to normal manual operations in the event of a programmable controller / bus system failure (emergency mode) or during test runs before commissioning, e.g. for testing the direction of rotation of the motor. The hand-held device can be connected to the compact starter by means of a connecting cable through a socket underneath the transparent cover.

Spare inputs

The compact starters are also equipped with two spare inputs.

The M12 socket is a "Y" connector. The signal inputs are applied to PIN 2 and 4. In this manner, it is possible, for example, to connect an optical proximity switch that supplies a signal and the "contamination" alarm.

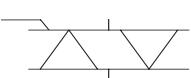

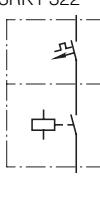

A "T" adapter can be used to split the signal inputs onto two M12 sockets. Compact starters modified in this way offer additional advantages. At no extra cost, it is possible to save AS-i addresses, reduce the space requirement and to build up logical groupings.

AS-Interface Motor Starters and Soft Starters

IP65/67 Motor Starters and Load Feeders

AS-Interface motor starters (24 V DC)

Overview

Connection of a drive roller with integrated DC motor to an AS-Interface 24 V DC motor starter

With the K60 AS-Interface 24 V DC motor starters for the low-end performance range up to 70 W, it is now possible to connect 24 V DC motors and the associated sensors directly to the AS-Interface quickly and easily.

Three different versions are available:

- Single direct-on-line starters
(without brake and reversible quick-stop function)
- Double direct-on-line starters
(with brake and reversible quick-stop function)
- Reversing starters
(with brake and reversible quick-stop function)

DC motors are connected to the module using M12 plug-in connections. The sensors and the module electronics can be supplied from the yellow AS-Interface cable. An auxiliary voltage (24 V DC) is only required for supplying the outputs, which can be provided via the black AS-Interface cable.

Quick-stop function

All AS-Interface 24 V DC motor starters feature a quick-stop function which can be switched on and off as required using a switch integrated into the module. The quick-stop function allows a connected motor to be disconnected immediately using an applied sensor signal (High). The switch for the quick-stop function is located alongside the input sockets and is protected by an M12 sealing cap.

Brake

The double direct-on-line starter and the single reversing starter versions feature an integrated permanently set brake function, i.e. as soon as the output signal is set to "0", the motor is braked.

Start-up using integrated buttons

Buttons integrated into the module (below the output sockets) can be used to set the motor used. The buttons are protected by an M12 sealing cap.

Note:

Concerning double and reversing starters: If an input with the quick-stop function receives a "High" signal, the corresponding output (e.g. quick-stop input 1 → output 1) is switched off within the device (the motor is braked). The manual key function (Key 1/2) for local operation is only permitted to be used during "CPU Stop" in the higher-level PLC.

Note:

Concerning single direct-on-line starters: If an input with the quick-stop function receives a "High" signal, the corresponding output (e.g. quick-stop input 1 → output 1) is switched off within the device (the motor runs down without being braked). The manual key function (Key 1) for local operation is only permitted to be used during "CPU Stop" in the higher-level PLC.

AS-Interface Motor Starters and Soft Starters

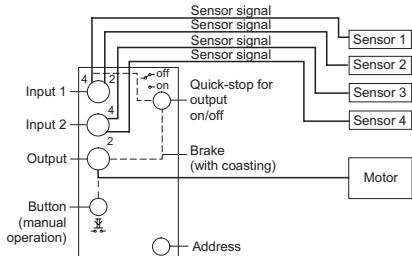

IP65/67 Motor Starters and Load Feeders

AS-Interface motor starters (24 V DC)

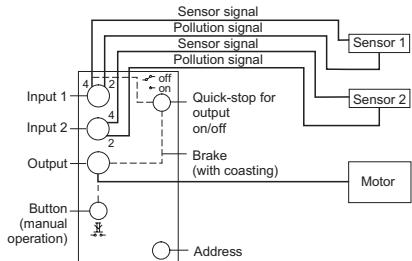

Applications

Single direct starter without brake
(with adjustable quick-stop function)

1st possibility: Connection to a maximum of four sensors without pollution indication

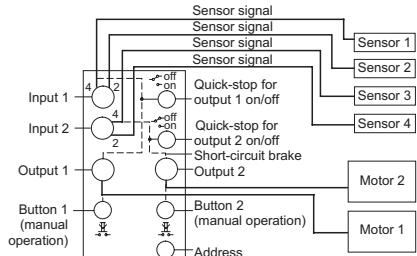

2nd possibility: Connection to a maximum of two sensors with pollution indication

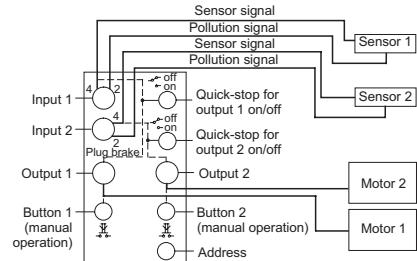

Double direct starter with brake
(with adjustable quick-stop function)

1st possibility: Connection to a maximum of four sensors without pollution indication

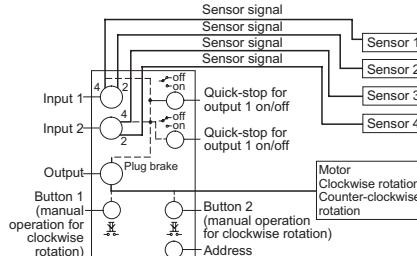

2nd possibility: Connection to a maximum of two sensors with pollution indication

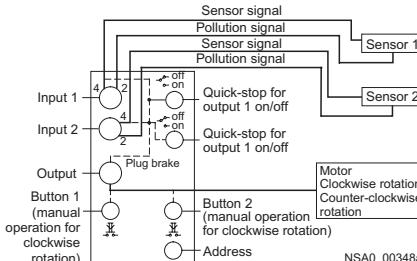

Single reversing starter with brake
(with adjustable quick-stop function)

1st possibility: Connection to a maximum of four sensors without pollution indication

2nd possibility: Connection to a maximum of two sensors with pollution indication

AS-Interface Motor Starters and Soft Starters

IP20 Motor Starters and Load Feeders

AS-Interface load feeder modules

Overview

The AS-Interface load feeder module adds an input/output module to the conventional busbar and standard mounting rail adapters. With this module the control circuit of a load feeder is available completely factory-wired. The series has been optimized for operation in conjunction with the SIRIUS load feeders size S00 and S0. Connection to the higher level automation system is made through the AS-Interface interface of the load feeder module. A non-shielded flexible lead can be used as data line and for the auxiliary current supply. Connection to the AS-Interface load feeder module is made using two connectors with the insulation displacement connection.

Four different AS-Interface load feeder modules are available: Differences exist in the number of inputs and outputs and in the type of outputs. The units with solid-state outputs are designed for 24 V DC, those with relay outputs are suitable for voltages of max. 230 V AC. Direct-on-line and reversing starters as well as double direct-on-line starters and starter combinations can be wired therefore for pole reversal. The inputs can be used to separately scan the feedbacks from motor starter protectors and contactors. The outputs can be used for direct control of the contactor coils.

As the outputs already have overvoltage protection integrated, no additional measures for the contactors are required.

The outputs are supplied with separate auxiliary voltage – a selectively configured EMERGENCY-STOP concept is possible therefore. The inputs are supplied from the AS-Interface data line. Inputs and outputs have to be wired using integrated, spring-loaded terminals, each connected to a common potential.

3RA5 fuseless load feeder with connection to AS-Interface

The 3RA5 fuseless load feeder, comprised of the AS-Interface load feeder module, motor starter protector, contactor and all necessary connectors (AS-Interface, auxiliary power and 5-pole power connector), is delivered completely assembled, factory-wired and tested. The user can thus save valuable time when mounting, wiring and servicing. Direct-on-line starters as well as reversing starters are available with SIRIUS switchgear size S00 up to 10 A and size S0 – on account of the power connector – up to 16 A. The complete feeders are available with AS-Interface load feeder modules with solid-state outputs for 24 V DC auxiliary voltage.

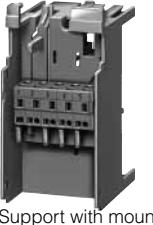

Load feeders with this type of configuration are used to control standard induction motors for example. The load feeders can be installed in central control cabinets as well as in local control boxes. They are particularly suitable for highly automated machines and plants that place high demands on availability.

AS-Interface Motor Starters and Soft Starters

IP20 Motor Starters and Load Feeders

Direct-on-line starters for busbar systems

Overview

The 3RA5 fuseless load feeders with AS-Interface offer the possibility of linking motor starters swiftly and at low cost to higher-level automation systems. The integrated 3RV1 motor starter protector for motor protection protects the motor against overloads and provides short-circuit protection for the cables. The 3RT1 contactor is used for operational switching. The switching state is triggered and signaled using the 3RK1 4 load feeder module on the AS-Interface.

- For direct start, a load can be switched on and off with the load feeder.

Application

The 3RA5 load feeders control central loads both in local switchboxes and also in control cabinets. They are used in highly automated installations that place high demands on availability.

More information

Types of coordination

The response of the device to short-circuits is described by the type of coordination according to EN 60947-4-1 (VDE 0660 Part 102), IEC 60947-4-1.

The 3RA5 fuseless load feeders with AS-Interface achieve the type of coordination "1" at $I_q = 50$ kA. This ensures that short-circuits of 50 kA will be deactivated without posing a hazard to persons and systems. The contactor may be damaged at such high short-circuit currents.

ET 200S motor starters

Overview

Motor starters, Standard, DS1-x direct-on-line starter

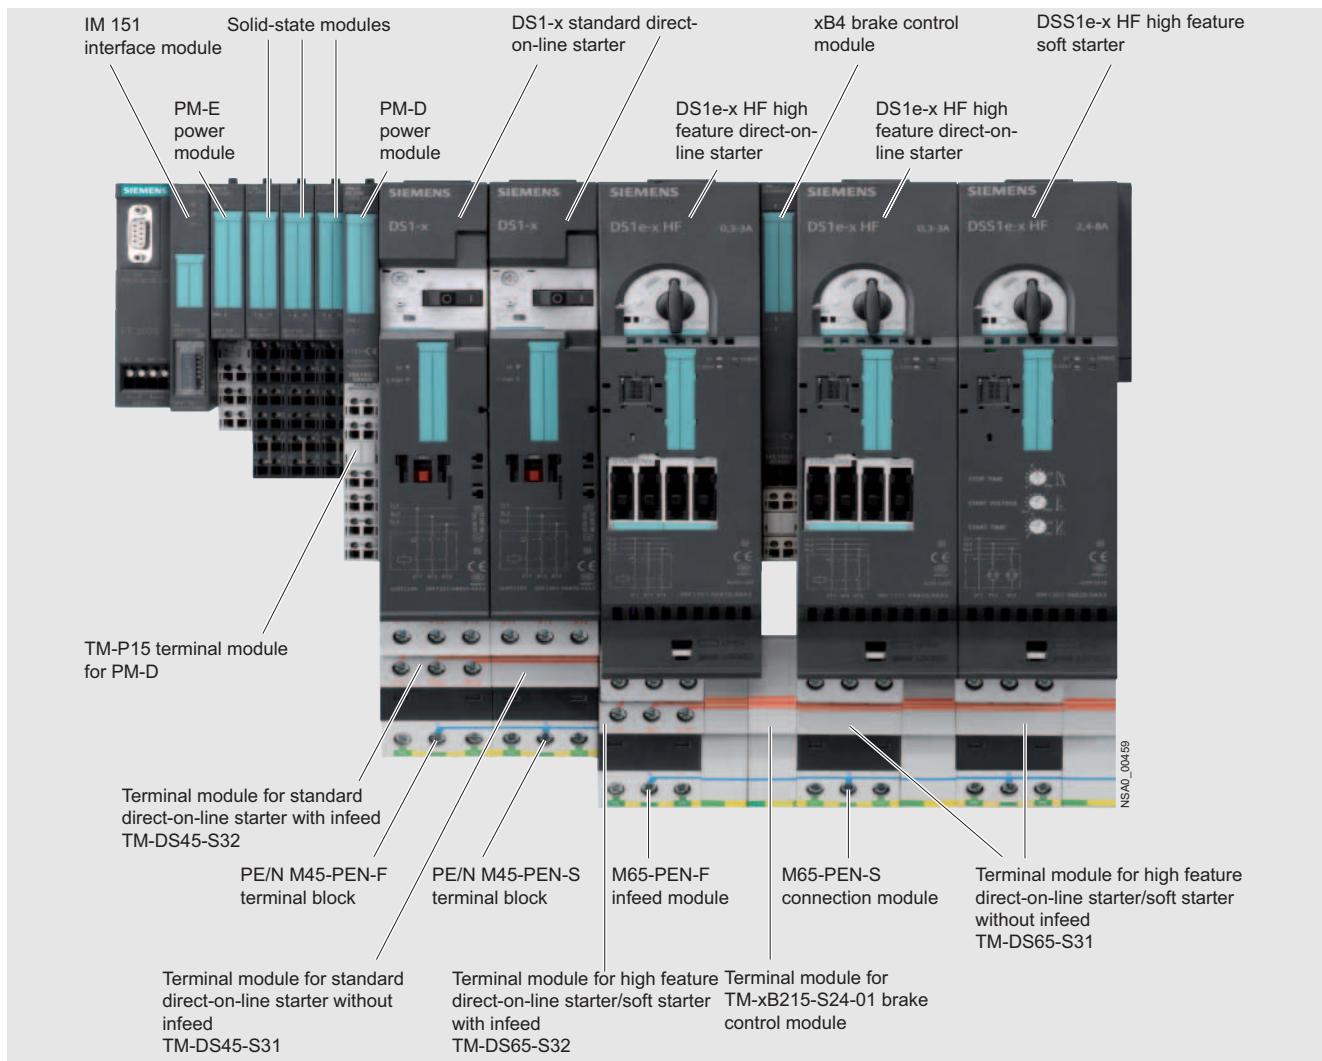

- Completely factory-wired motor starters for switching and protecting any three-phase loads
- Can be used as a direct-on-line, reversing or soft starter
- Standard motor starter with motor starter protector and contactor assembly up to 5.5 kW
- High Feature motor starter with a combination comprising a starter motor starter protector, solid-state overload protection and contactor or soft starter up to 7.5 kW
- With self-assembling 40/50 A power bus, i.e. the load voltage is only supplied once for a group of motor starters
- Hot swapping is permissible
- Inputs and outputs for activating and signaling the statistics have been integrated
- Diagnostics capability for active monitoring of the switching and protection functions
- Can be combined with expansion modules: Brake control module for controlling electromechanical brakes in induction motors and with two optional inputs for special functions (for quick stop with the Standard motor starter and for parameterizable special functions with the High Feature motor starter)
- For combining with safety technology (see ET 200S Solutions Local/PROFIsafe Safety Motor Starters, page 6/94 onwards) for use in safety-related subsystems (EN 954-1).

Motor starters, High Feature, DS1e-x direct-on-line starter

ET 200S Motor Starters

ET 200S motor starters

Interplay of ET 200S motor starter components

Application

With the ET 200S motor starters, any three-phase loads can be protected and switched. The communications interface makes them ideal for operation in distributed control cabinets or control enclosures.

As the motor starters are completely factory-wired, power control cabinets can be assembled far more quickly and compactly. Configuring is made easier by the fine modular structure. When using the ET 200S motor starters, the list of parts per load feeder is reduced to two main items: The passive terminal module and the motor starter. This makes the ET 200S ideal for modular machine concepts as well.

Expansions are easily possible through the subsequent adding of terminal modules. With their modular terminal design (10 mm^2) the latter also do away with the distribution wiring otherwise required. Through the permanent wiring and the hot swapping function (disconnection and connection during operation) a motor starter can be replaced within seconds if necessary. The motor starters are therefore recommendable in particular for applications with special demands on availability.

The possibility of expanding the motor starters with brake control modules xB1-xB4 means that motors with 24 V DC brakes (xB1, xB3) as well as motors with 500 V DC brakes (xB2, xB4) can be controlled. The 24 V DC brakes have an external supply and can be vented independently of the switching state of the motor starter. By contrast the 500 V DC brakes mostly have a direct supply from the terminal board of the motor through a rectifier module and therefore cannot be vented when the motor starter is switched off. These brakes cannot be used in combination with the DSS1e-x motor starter (soft starter).

The outputs of the brake control modules can be used alternatively for other purposes, e.g. for controlling DC valves. With two locally acting inputs optionally available on the brake control modules (xB3, xB4) and another two on the control module of the High Feature motor starter it is possible to realize autonomous special functions which work independently of the bus and the higher level control system, e.g. as a quick stop on gate valve controls. In parallel with this, the states of these inputs are signaled to the control system.

ET 200S motor starters

As the result of the selective protection concept with solid-state overload evaluation and the use of SIRIUS switchgear size S0, additional advantages are realized on the High Feature motor starters - advantages which soon make themselves positively felt particularly in manufacturing processes with high plant stoppage costs:

- Only two variants up to 7.5 kW
- All settings can be parameterized by bus
- Separate overload and short-circuit signals
- Overload can be acknowledged by remote reset
- Current unbalance monitoring
- Stall protection
- Emergency start function in the event of overload
- Current value transmission by bus
- Current limit monitoring
- Class 10 or 20 can be parameterized
- Type of coordination "2" (still functional after short-circuit with magnitude of 50 kA)
- Very high contact endurance

Accessories

Following accessories are available:

DM-V15 distance module

The distance module is available for applications with high motor currents or high ambient temperatures involving Standard motor starters. It can be used to the right and left of a DS1-x direct-on-line starter or to the right of an xB1-4 brake module in order to improve heat removal to the side. The distance module is a completely passive module and does not need to be taken into account with regard to the control system during configuration. Details of the distance module can be found in the manual "SIMATIC ET 200S". If you have any queries concerning the use of the distance module, contact Technical Support for Siemens Low-Voltage Controls (fax: ++49 (0)911/895-5907).

PE/N bridge module

PE/N bridge modules are used to bridge gaps in the PE/N bus which are caused, for example, by using brake control modules, PM-D(F) power modules or PM-X connection modules. If a bridge module is used, the supply must not be fed in anew. They are available in widths of 15 and 30 mm.

L1/L2/L3 bridge module

The L1/L2/L3 bridge modules are used to bridge gaps in the power bus (see above). They are available in widths of 15 and 30 mm.

ET 200S Motor Starters

Power modules for ET 200S motor starters

Overview

- For supplying and monitoring the auxiliary voltages for motor starters
- Disconnection of a complete group of motor starters is possible without any additional outlay (safety category 1 according to EN 954-1)
- For plugging onto TM-P15 terminal module
- For supplying and monitoring the power supply for the ET 200S FC frequency converter

Application

PM-D power modules are used for monitoring the two 24 V DC auxiliary voltages for the group of motor starters following on the right or for supplying power to the group of frequency converters following on the right. The voltage is fed in through TM-D modules to the self-assembling potential bars.

A voltage failure is signaled through PROFIBUS diagnostics to the higher-level master. Additional LEDs inform locally about the status of the auxiliary voltages.

The separation of auxiliary voltages for signal checkback and power section actuation enables the entire group to be shut down while maintaining the diagnostics capability.

Overview**Terminal modules for motor starters**

- Mechanical modules in which the motor starter and expansion modules are inserted
- For constructing the permanent wiring and self-assembling voltage bus
- For connecting the motor connection cables
- Positive-locking connection to ensure enhanced vibration resistance

Terminal modules for frequency converters

- Mechanical modules in which the components of the frequency converter are inserted
- For constructing the permanent wiring and self-assembling voltage bus
- For connecting the motor cables
- Integrated shield attachments for receiving the busbar 3 x 10 mm

Terminal modules for power modules

- Connection by means of screw terminals
- Light colored enclosure for visual distinction
- Always before the first TM-DS/TM-RS

Terminal modules for ET 200S motor starters**Application****Terminal modules for motor starters and frequency converters**

Terminal modules are purely mechanical components for accommodating the ET 200S peripherals. The self-assembling voltage buses integrated in the terminal modules reduce wiring outlay to the single infeed. All modules following on the right are automatically supplied upon plugging the terminal modules together. The robust design and keyed connection technology enables use in harsh industrial conditions.

The terminal modules for motor starters and frequency converters are available in different variants:

- Terminal modules for TM-DS and TM-RS motor starters
- Terminal modules for frequency converters:
 - TM-ICU for the control modules
 - TM-IPM for the power sections
- Terminal modules for expansion modules (TM-xB)

Terminal modules for TM-DS and TM-RS motor starters

The TM-DS and TM-RS terminal modules are available in various versions for the Standard motor starters and the High Feature motor starters. The terminal modules with the suffix "-S32" have connection terminals for feeding into the integrated 40 A/50 A power bus and connection terminals for the motor connection cable. They are mounted at the beginning (left) of a power bus segment.

The terminal modules with the suffix "-S31" have only connection terminals for the motor connection cable. These terminal modules follow on the right after a "-S32" terminal module. To configure a new load group, another "-S32" terminal module is plugged in. All connection terminals of the terminal modules for motor starters are equipped with strong 10 mm² terminals. The "-S32" terminal modules are delivered with three caps for closing the power bus contacts on the final terminal module of a segment.

Terminal modules for frequency converters

The TM-ICU terminal module is used for both variants of the ICU24/ICU24F control module. A TM-IPM is then always plugged in after a TM-ICU. The TM-IPM with a width of 65 mm is used to accommodate the IPM25 power section with 0.75 kW. A terminal module with a width of 130 mm is needed for the power sections with 2.2 or 4.0 kW.

Each TM-IPM terminal module has a shield attachment for accommodating a shield bar. Hence shielded motor cables can be grounded using shield terminals.

The terminal modules with the suffix "-S32" have connection terminals for feeding into the integrated 50 A power bus and connection terminals for the motor connection cable. They are mounted at the beginning (left) of a power bus segment.

The terminal modules with the suffix "-S31" have only connection terminals for the motor connection cable. These terminal modules follow on the right after a "-S32" terminal module. To configure a new load group, another "-S32" terminal module is plugged in. All connection terminals of the terminal modules for frequency converters are equipped with strong 10 mm² terminals.

The "-S32" terminal modules are delivered with three caps for closing the power bus contacts on the final terminal module of a segment.

ET 200S Motor Starters

Terminal modules for ET 200S motor starters

Terminal modules for expansion modules (TM-xB)

The TM-xB terminal modules are used to accommodate the xB1, xB2, xB3 and xB4 brake control modules. The TM-xB terminal module must always follow directly after a terminal module for Standard motor starters, High Feature motor starters or frequency converters as control of the solid-state braking switch is provided through an output of the motor starter/frequency converter. The xB215 terminal modules for the brake control modules have not only the terminals for connecting the cable for the motor brake but also the terminals of the two local acting inputs. These local inputs are not evaluated by a frequency converter; for this reason the xB215 terminal module may be plugged in only downstream from a motor starter (Technical specifications, Selection and ordering data, see the section "Accessories for Motor Starters and Frequency Converters").

PE/N terminal blocks

The PE/N terminal block is required for direct connection of the protective conductor in the motor cable without intermediate terminals. It is plugged together with the terminal module for motor starters/frequency converters before the latter is mounted on the

standard mounting rail. With two PE terminals and one N terminal the "-F" variant is connected to the "-S32" terminal modules for motor starters/frequency converters. The "-S" variant is combined with the "-S31" terminal module. The "F" terminal modules are delivered with two caps for closing the PE/N bus contacts on the final terminal module of a segment. The modules for the Standard motor starters have a width of 45 mm and the modules for the High Feature motors starters / frequency converters have a width of 65 mm.

There is no electrical connection between the terminals of the PE/N terminal block and the internal shielding of the frequency converter.

The PE/N terminal block must not be used for the shielding of the motor cable. For EMC-compatible wiring of the frequency converter the shield of the motor cable must be connected through a shield bar to the integrated shield attachment in the terminal module of the converter. In addition the shield bar must be connected by the shortest possible route to the enclosure of the EMC filter.

Interface/solid-state modules

Selection and ordering data

Version	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*	PG	Weight per PU approx. kg
IM 151-1 interface modules							
IM 151-1 BASIC interface modules for ET 200S; transmission rates up to 12 Mbit/s; up to 12 power, solid-state and motor starter modules can be connected; connection to bus through 9-pole Sub-D including bus termination module	A	6ES7151-1CA00-0AB0			1	1 unit	250 0.184
IM 151-1 COMPACT 32 DI 24 V DC interface modules for ET 200S; transmission rates up to 12 Mbit/s; 32 digital inputs, up to 12 power, solid-state and motor starter modules can be connected; connection to bus through 9-pole Sub-D including bus termination module	A	6ES7151-1CA00-1BL0			1	1 unit	250 0.207
IM 151-1 COMPACT 16 DI 24 V DC/16 DO 24 V/0.5 A interface modules for ET 200S; transmission rates up to 12 Mbit/s; 16 digital inputs and 16 digital outputs, up to 12 power, solid-state and motor starter modules can be connected; connection to bus through 9-pole Sub-D including bus termination module	A	6ES7151-1CA00-3BL0			1	1 unit	250 0.207
IM 151-1 STANDARD interface modules for ET 200S; transmission rates up to 12 Mbit/s; data volume of 244 bytes each for inputs and outputs; up to 63 power, solid-state and motor starter modules can be connected; connection to bus through 9-pole Sub-D including bus termination module	A	6ES7151-1AA04-0AB0			1	1 unit	250 0.186
IM 151-1 FO STANDARD interface modules for ET 200S; transmission rates up to 12 Mbit/s; data volume of 128 bytes each for inputs and outputs; up to 63 power, solid-state and motor starter modules can be connected; connection to bus using integrated fiber-optic cable including bus termination module	A	6ES7151-1AB02-0AB0			1	1 unit	250 0.194
IM 151-1 High feature interface modules for ET 200S; transmission rates up to 12 Mbit/s; data volume of 244 bytes each for inputs and outputs; up to 63 modules can be connected; connection of PROFIsafe modules, isochrone mode (clocked operation); connection to bus through 9-pole Sub-D including bus termination module	A	6ES7151-1BA01-0AB0			1	1 unit	250 0.181
Accessories							
TM-C120S terminal modules Terminal module for ET 200S COMPACT, screw terminals	A	6ES7 193-4DL10-0AA0			1	1 unit	250 0.140
TM-C120C terminal modules Terminal module for ET 200S COMPACT, spring-loaded terminals	A	6ES7 193-4DL00-0AA0			1	1 unit	250 0.140
TE-U120S4x10 terminal modules Additional terminal for TM-C120x terminal modules of ET 200S COMPACT; screw terminals for 3-conductor connection; please order two for 4-conductor connection. Can also be plugged into TM-E/TM-P if the same height of the terminal modules exists over a width of at least 120 mm	A	6ES7 193-4FL10-0AA0			1	1 unit	250 0.140
TE-U120C4x10 terminal modules Additional terminal for TM-C120x terminal modules of ET 200S COMPACT; spring-loaded terminals for 3-conductor connection; please order two for 4-conductor connection. Can also be plugged into TM-E/TM-P if the same height of the terminal modules exists over a width of at least 120 mm	A	6ES7 193-4FL00-0AA0			1	1 unit	250 0.140
Manuals for ET 200S distributed I/O system can be downloaded as a PDF file from the Internet: http://www.siemens.com/simatic-docu							
SIMATIC Manual Collection Manuals on CD, several languages: S7-200, TD 200, S7-300, M7-300, C7, S7-400, M7-400, STEP 7, Engineering Tools, Runtime Software, SIMATIC DP (Distributed I/O), SIMATIC HMI (Human Machine Interface), SIMATIC NET (Industrial Communication)	A	6ES7 998-8XC01-8YE0			1	1 unit	230 0.227
SIMATIC Manual Collection – Update service for 1 year Scope of supply: The current CD S7 Manual Collection as well as the three subsequent updates	X	6ES7 998-8XC01-8YE2			1	1 unit	230 0.200
100 Simplex connectors for plastic fiber-optic cable including 5 polishing sets	A	6GK1 901-0FB00-0AA0			1	1 unit	550 0.200
50 plug-in adapters each for 2 Simplex connectors	A	6ES7 195-1BE00-0XA0			1	1 unit	250 0.117
Inscription sheets in A4 format (10 units) Each sheet contains 60 labeling strips for I/O modules and 20 labeling strips for interface modules.							
• petrol	A	6ES7 193-4BH00-0AA0			1	1 unit	250 0.200

ET 200S Motor Starters

Interface/solid-state modules

Version	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*	PG	Weight per PU approx. kg
IM 151-1 interface modules (continued)							
Inscription sheets in A4 format (10 units) can be used for ET 200S COMPACT. Each sheet contains 10 labeling strips.							
• beige	A	6ES7 193-4BA10-0AA0	1	1 unit	250	0.230	
• yellow	A	6ES7 193-4BB10-0AA0	1	1 unit	250	0.200	
• red	A	6ES7 193-4BD10-0AA0	1	1 unit	250	0.200	
• petrol	A	6ES7 193-4BH10-0AA0	1	1 unit	250	0.200	
Termination modules as spare part for ET 200S	A	6ES7 193-4JA00-0AA0	1	1 unit	250	0.027	
SIMATIC S5, 35 mm standard mounting rails							
• 483 mm long for 19" cabinets	A	6ES5 710-8MA11	1	1 unit	250	0.440	
• 530 mm long for 600 mm cabinets	A	6ES5 710-8MA21	1	1 unit	250	0.466	
• 830 mm long for 900 mm cabinets	A	6ES5 710-8MA31	1	1 unit	250	0.820	
• Length 2 m	A	6ES5 710-8MA41	1	1 unit	250	1.930	
IM 151-3 PN interface module							
IM 151-3 PN interface modules for ET 200S; transmission rates up to 100 Mbit/s; data volume dependent on number of modules mounted, up to 63 modules can be connected, connection to bus through RJ45	A	6ES7 151-3AA20-0AB0	1	1 unit	250	0.188	
IM 151-3 PN PROFINET High Feature interface modules for ET 200S; transmission rates up to 100 Mbit/s; up to 63 modules with max. width of 2 m can be connected, connection to bus through RJ45, including termination module	A	6ES7 151-3BA20-0AB0	1	1 unit	250	0.188	
Accessories							
Industrial Ethernet FC RJ45 Plug 90 RJ45 plug-in connector for Industrial Ethernet, with robust metal enclosure and integrated cutting and clamping contacts for connection of Industrial Ethernet FC installation cables; with 90° cable feeder							
• 1 unit	A	6GK1 901-1BB20-2AA0	1	1 unit	543	0.030	
• 10 units	A	6GK1 901-1BB20-2AB0	1	1 unit	543	0.300	
• 50 units	A	6GK1 901-1BB20-2AE0	1	1 unit	543	1.500	
Industrial Ethernet Fast Connect installation cables Sold by the meter, delivery unit max. 1000 m, minimum order quantity 20 m							
• IE FC TP standard cable GP 2 x 2	A	6XV1 840-2AH10	1	1 unit	550	0.055	
• IE FC TP trailing cable 2 x 2	A	6XV1 840-3AH10	1	1 unit	550	0.055	
• IE FC TP trailing cable GP 2 x 2	A	6XV1 870-2D	1	1 unit	550	0.068	
• IE FC TP torsion cable GP 2 x 2	A	6XV1 870-2F	1	1 unit	550	0.060	
• IE FC TP marine cable 2 x 2	A	6XV1 840-4AH10	1	1 unit	550	0.055	
Industrial Ethernet Fast Connect stripping tools

ET 200S Safety Motor Starter Solutions Local / PROFIsafe

General data

Overview

The ET 200S Safety motor starter Solutions comprise:

- Safety modules
- Standard motor starters
- High Feature motor starters
- Failsafe motor starters

With the ET 200S Safety motor starter Solutions there is no complicated and hence cost-intensive configuring and wiring outlay compared to the conventional safety technology. The ET 200S Safety motor starter Solutions are designed for Category 4 according to EN 954-1 or SIL 3 IEC 61508.

They enable the use of safety-oriented direct-on-line starters or reversing starters in the SIMATIC ET 200S distributed peripherals system on PROFINET or PROFIBUS. The fine modular architecture of the system enables optimum imaging of machine or plant applications.

Within an ET 200S station the Safety motor starter Solutions can also be combined with Standard motor starters or High Feature motor starters without safety functions or the SIMATIC ET 200S FC frequency converter up to max. 4 kW up to Category 3 according to EN 954-1 or SIL 2 according to IEC 61508.

Standard and High Feature ET 200S motor starters can be found on page 6/69 onwards.

The "SIMATIC ET 200 Configurator" software can be found in Catalog CA 01 on CD or DVD. You can also download the "SIMATIC ET 200 Configurator" software from the Internet:

<http://www.siemens.com/sirius-starting>

<http://www.siemens.com/ET200S>

Application

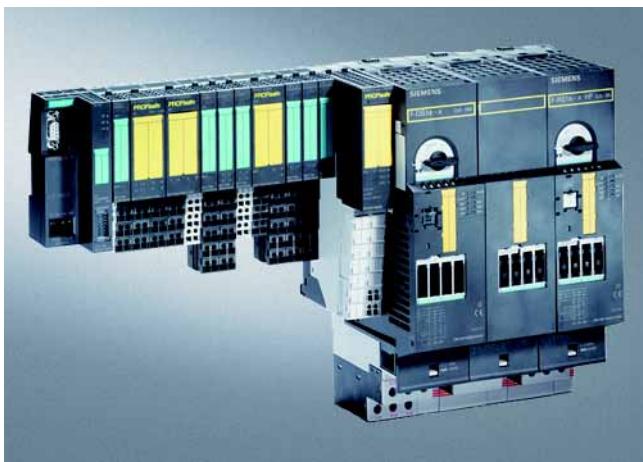

The ET 200S Safety motor starter Solutions are preferred in all production and process automation fields in which the enhancement of plant availability and flexibility plays a key role.

- **Safety motor starters Solutions local** are preferred from the safety technology point of view for locally restricted safety applications. These motor starters are not dependent on a safe control system.
- **Safety motor starters Solutions PROFIsafe** are often found by contrast in safety applications of the more complex type that are interlinked. In this case a safe control system is used with the bus systems PROFINET or PROFIBUS with the PROFIsafe profile.

ET 200S Safety Motor Starter Solutions Local / PROFIsafe

ET 200S Failsafe motor starters

Overview

The Failsafe motor starter has been developed on the basis of the High Feature motor starter. It differs in that, in addition to a motor starter protector and contactor assembly, a safe solid-state evaluation circuit is installed for error detection purposes which makes the motor starter failsafe.

If the contactor to be switched fails in an EMERGENCY-STOP case, the evaluation electronics detects a fault and opens the motor starter protector in the motor starter through a shunt trip unit in a failsafe manner. The second redundant shutdown component is therefore no longer a main contactor, as is generally the case, but the motor starter protector installed in the motor.

All functions of the High Feature starter are already integrated

The new Failsafe motor starters are characterized by easy, space-saving mounting as well as minimal wiring outlay. Like the High Feature starters, the Failsafe motor starters have a switching capacity of up to 7.5 kW (16 A) which is achieved with just two motor starter versions. Another important feature is the high availability due to the high short-circuit withstand capability (type of coordination "2").

Benefits

- Advantages over conventional safety technology
- Significant savings in components (less hardware)
- Less mounting and installation work
- Motor starters are failsafe and offer high availability

Application

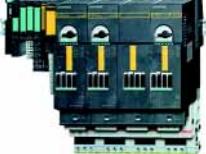

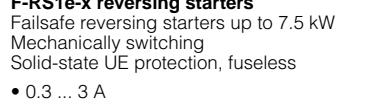

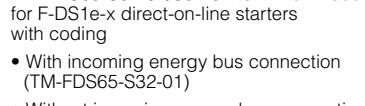

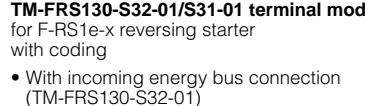

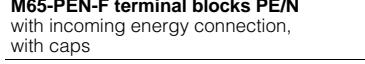

Use

The Failsafe motor starter is predestined for use in combination with PROFIsafe (see figure *ET 200S Safety Motor Starter Solution PROFIsafe with Failsafe Motor Starters* on page 6/103). Another field of application is in combination with ASIsafe or safety relays (see example 2 on page 6/98 *Failsafe Motor Starters with ASIsafe and 3TK28*).

ET 200S Safety Motor Starter Solutions Local / PROFIsafe

Safety modules local

Overview

Interplay of ET 200S Safety motor starters Solutions local components

PM-D F1 safety module

Safety motor starters Solutions local

- For use of standard, High Feature or Failsafe motor starters in systems with safety categories 2 to 4 (according to EN 954-1)
- No complex wiring for conventional safety technology
- Can also be used in combination with external safety relays
- Can also be used to activate external safety systems
- Safety module available for function-monitored and automatic starting
- Safety module available for stop category 0 and 1
- Safety module for monitoring the auxiliary voltages for motor starters
- Safety modules can be plugged into the TM-PF30 terminal modules.

ET 200S Safety Motor Starter Solutions Local / PROFIsafe

Safety modules local

PM-D F1/F2/F3/F4/F5 safety modules

- PM-D F1/F2/F3/F4 safety modules monitor auxiliary voltages and contain the complete functionality of a safety relay:
 - PM-D F1
For evaluation of EMERGENCY-STOP circuits with the function "monitored start".
 - PM-D F2
For monitoring of protective doors with the function "automatic start".
 - PM-D F3
Expansion to PM-D F1/F2 for time-delayed disconnection.
 - PM-D F4
For expansion of safety circuits with other ET 200S motor starters, e.g. in a different line.
 - PM-D F5
Transmits the status from PM-D F1 ... 4 through four floating enabling circuits to external safety equipment (contact multipliers)
- The PM-D F1 and PM-D F2 modules can be combined with the PM-D F3 or PM-D F4 modules.
- A PM-D F5 can be positioned at any point between a PM-D F1 ... 4 and a PM-X.
- Safety modules monitor the U1 and U2 auxiliary voltages. A voltage failure is relayed as a diagnostics signal over the bus.
 - No additional PM-D safety module is required when the safety modules are used.
 - Each safety circuit, beginning with a PM-D F1 ... 4, must be terminated with one PM-X each.

Failsafe Kit

The Failsafe Kit (F-Kit) must be added to each Standard motor starter in a safety segment in order to monitor the switching function.

F-Kit 1 supplements the DS1-x direct-on-line starter, F-Kit 2 the RS1-x reversing starter.

The F-Kits are comprised of:

- Contact supports for the terminal modules
- One or two auxiliary switch blocks for the contactor/contactors of the motor starter
- Connecting cables

High Feature motor starters and their terminal modules come as standard with the functionality of the F-Kits integrated.

Examples

The diverse possible uses of the Safety motor starters Solutions local are presented in the manual SIMATIC ET 200S Motor Starters in the context of typical sample applications.

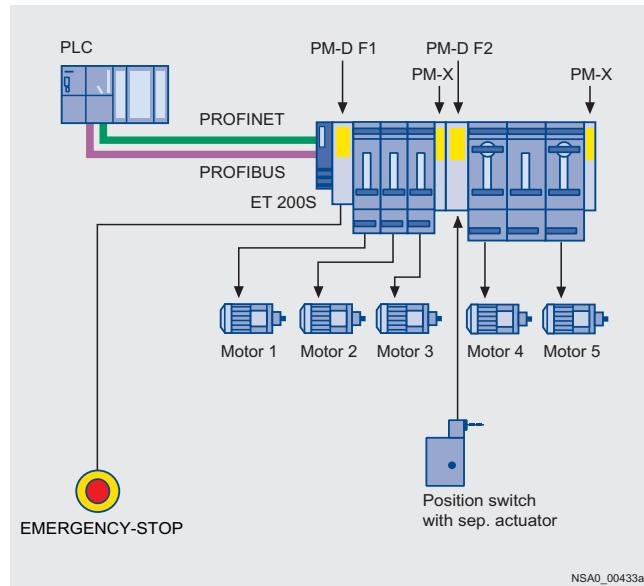

Safety functional examples for easy, quick and low-cost implementations of applications with Safety motor starters Solutions local are available on the Internet:

You can find more information on the Internet at:

<http://www.siemens.com/sirius-starting>

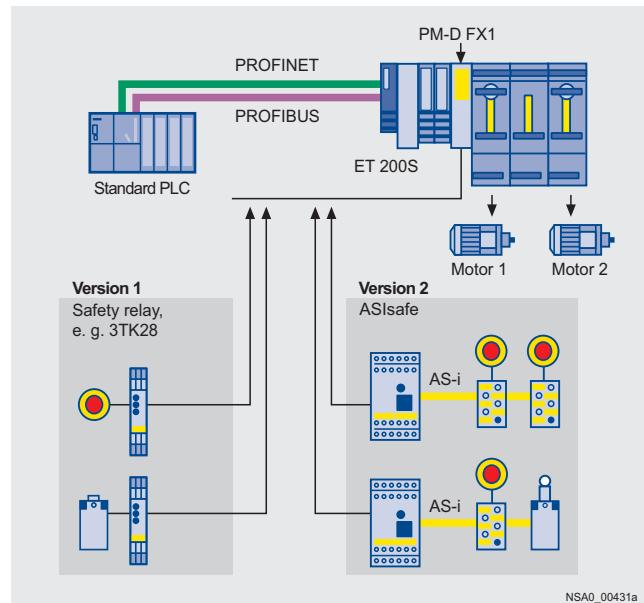

<http://www.siemens.com/ET200S>

Example 1:

ET 200S Safety motor starter Solutions local with 2 safety circuits (= switch-off groups), Standard motor starters and High Feature motor starters.

Example 2:

ET 200S Safety motor starter Solutions local with 2 external safety combinations (= safety relays or ASIsafe monitors) and with Failsafe motor starters (PM-DFX1 application). 2 of the 6 available safe switch-off groups are used.

Signals with relevance for safety can be input to ET 200S through a PM-DFX1 infeed terminal module through the enabling circuits of the ASIsafe monitor or the safety relay to control the Failsafe motor starters which then selectively switch off the downstream motors.

ET 200S Safety Motor Starter Solutions Local / PROFIsafe

Safety modules local

Application

Safety motor starters Solutions local

With the Safety motor starters Solutions local it is easy to configure several safety circuits. The safety sensors are connected directly and locally to the safety modules. These safety modules perform the work of the otherwise obligatory safety relays and safely shut down the downstream motor starters in accordance with the function selected. The crosslinks required for this are already integrated in the system and need no additional wiring. All signals from the safety modules are automatically relayed as diagnostics signals, e.g. in the event of crossover in the EMERGENCY-STOP circuit.

The highest safety category 4 according to EN 954-1 can be obtained with Safety motor starters Solutions local. They can thus be used for evaluation of EMERGENCY-STOP circuits or for monitoring protective doors and also for time-delayed disconnections. With the contact multiplier the safety-relevant signals can also be made available to external systems.

All standard safety applications can be covered through combination of different TM-PF30 terminal modules. Needless to say, ET 200S motor starters can also be used in conjunction with external safety relays or with ASIsafe.

Use of the PM-DFX1 safety module: The PM-DFX1 safety module is used for feeding in 1 to 6 switch-off groups. The infeed voltage can be switched using 1 to 6 external safety shutdown devices (either ASIsafe monitors or 3TK28 safety relays). This safety module is used in applications with external safety shutdown devices where there is a need for the fully selective safety shutdown of failsafe motor starters (see overview, example 2, page 6/98).

With the Safety motor starters Solutions local, up to 80 % of wiring is saved compared to conventional safety technology with local safety applications.

Terminal modules for (TM-PF30) safety module

For supplying load and sensor voltage to the potential bars of the motor starters, and for connection of the 2-channel sensor circuit (e.g. EMERGENCY-STOP pushbutton) and a reset button. Different terminal modules are available for the configuring of separate safety circuits or for the cascading of safety circuits, and for applications with time-delayed disconnection.

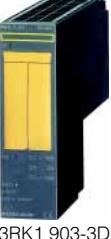

Terminal modules for (TM-X) safety module

For connection of an external infeed contactor (2nd shutdown possibility). With terminals for contactor coil and feedback contact. Is always required to terminate a group of safety-oriented motor starters.

Safety modules PROFIsafe

Overview

Interaction of ET 200S Safety motor starter Solutions PROFIsafe components

Safety motor starters Solutions PROFIsafe

PM-D F PROFIsafe with TM-PF30 S47-F0 terminal module

Sensor and actuator assignment are freely configurable within the framework of the distributed safety concept:

The logic of the safety functions is implemented by software. Safety-oriented PROFIsafe communication and the use of a safety-oriented control system are required.

Integration of the safety technology in the standard automation is realized through a single bus system (see Advantages of PROFIsafe), using PROFIBUS as well as PROFINET.

- For the use of Failsafe motor starters in plants with safety category 2 to 4 according to EN 954-1 and SIL 2 and 3 according to IEC 61508. The use of standard or High Feature motor starters is also possible with certain assemblies
- High flexibility (any assignment of sensors to motor starters using the PLC)
- Full selectivity of disconnection of the Failsafe motor starters
- No complex wiring for conventional safety technology, e.g. no infeed contactors even in the highest safety category
- Can also be used to activate external safety systems through F-CM contact multipliers
- Safety module available for any safety function
- Safety module available for stop category 0 and 1
- Safety module for monitoring the auxiliary voltages for motor starters
- Safety modules can be plugged into the TM-PF30 terminal modules.

ET 200S Safety Motor Starter Solutions Local / PROFIsafe

Safety modules PROFIsafe

High degree of flexibility with safety technology

Failsafe motor starters for PROFIsafe:

In EMERGENCY-STOP applications, the Failsafe motor starters are selectively switched off through the upstream PM-D F PROFIsafe safety module. For each safety module, six switch-off groups can be formed. In the first delivery stage, the failsafe freely-programmable logic of the SIMATIC controller is used to interface with the relevant Failsafe sensor technology. The interface between PROFIsafe and installations that use conventional safety technology is implemented through the F-CM Failsafe contact multiplier with four floating contacts.

Example:

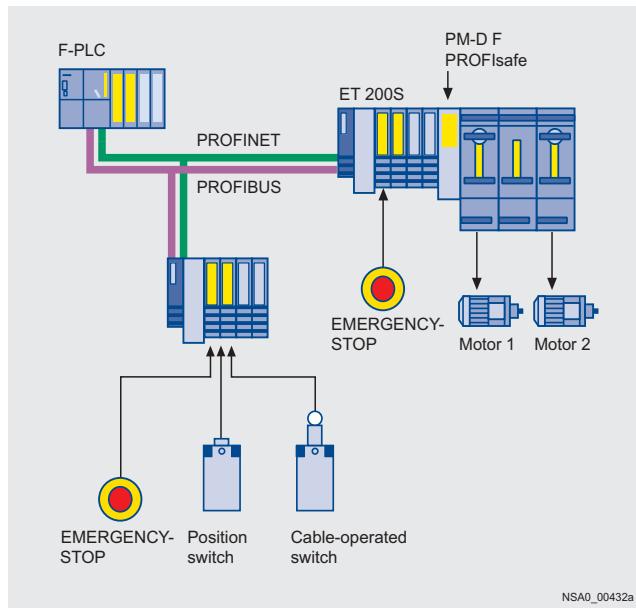

The diverse possible uses of the Safety motor starter Solutions PROFIsafe are presented in the manual SIMATIC ET 200S motor starters in the context of typical sample applications.

Safety functional examples for easy, quick and low-cost implementations of applications with safety motor starters Solution PROFIsafe are available on the Internet:

You can find more information on the Internet at:

<http://www.siemens.com/sirius-starting>

<http://www.siemens.com/ET200S>

ET 200S Safety motor starters Solutions PROFIsafe with Failsafe motor starters and fully selective disconnection (PM-DF PROFIsafe application)

Within an ET 200S station the Failsafe motor starters are assigned to one of 6 safety segments. For plants with distributed configuration the shutdown signals of these safety segments are preferably issued by a higher level, safety-oriented control system through PROFIsafe. This permits the greatest flexibility for assigning the motor starters to different safety circuits.

Alternatively, an ET 200S F-CPU can also be used for control purposes.

Application

Safety motor starter Solutions PROFIsafe

If a safety-oriented SIMATIC CPU is used, the ET 200S is available as a safety-oriented peripheral. Nevertheless, in such a station it is possible to configure conventional motor starters and input/output modules mixed with modules with safety functions.

Thanks to the PROFIsafe profile the safety functions are available in the complete network, which means that the Safety motor starter Solutions PROFIsafe enable the selective disconnection of a Failsafe motor starters or the disconnection of a group of Standard and High Feature motor starters regardless of where and on which peripheral station the safe control devices were connected. As such, this solution provides an unprecedented level of flexibility and reduction of wiring for applications in widespread plants or with a sporadic demand for changes in the assignment of safety segments.

The Safety motor starter Solutions PROFIsafe are ideally suited for safety concepts with category 2 to 4 according to EN 954-1 or up to SIL 3 according to IEC 61508.

Each safety module switches up to 6 switch-off groups for Failsafe motor starters/frequency converters.

PM-D F PROFIsafe safety modules

The PM-D F PROFIsafe safety module receives the shutdown signal from the interface module of the ET 200S and safely switches off 1 to 6 switch-off groups. This safety module is used in PROFIsafe applications where there is a need for the selective safety shutdown of Failsafe motor starters/frequency converters.

Standard and High Feature

Overview

**Motor starters**

- Only two variants up to 5.5 kW
- All settings can be parameterized by bus
- Comprehensive diagnostics signals
- Overload can be acknowledged by remote reset
- Current unbalance monitoring
- Stall protection
- Emergency start function in the event of overload
- Current value transmission by bus
- Current limit monitoring
- Direct-on-line or reversing starters
- Power bus can be plugged in using the new HAN Q4/2 plug-in connectors
- Conductor cross-sections up to 6 x 4 mm²
- 25 A per segment
(power looped through using jumper plug)
- Supplied with 400 V AC brake contact as an option

Isolator module

The isolator module with switch disconnector function is used for safe disconnection of the 400 V operational voltage during repair work in the plant and provides an integrated group fusing function (i.e. additional group short-circuit protection for all subsequently supplied motor starters).

Depending on the power distribution concept, all stations can be equipped with an isolator module as an option.

Safety local isolator module

With the Safety local modules

- Safety local isolator module and
- 400 V disconnecting module

it is possible to achieve safety category 4 with an appropriate connection.

The Safety local isolator module is a maintenance switch with integrated safety evaluation functions that can be parameterized using DIP switches.

It is used for:

- Connection of a 1 or 2-channel EMERGENCY-STOP circuit up to category 3-4/Sil3 (protective door or EMERGENCY-STOP pushbuttons) and parameterizable start behavior
- Control of the 400 V disconnecting module by means of a safety rail signal

Benefits

ET 200pro motor starters provide the following advantages:

- High flexibility thanks to a modular and compact design
- Little variance among all motor starter versions (2 units up to 5.5 kW)
- Extensive parameterization using STEP 7 HW-Config
- Increase of plant availability through fast replacement of units (easy mounting and plug-in technology)
- Extensive diagnostics and information for preventive maintenance
- Parameterizable inputs for local control functions (High Feature)
- Cabinet-free construction thanks to high degree of protection IP65

Application

With the ET 200pro motor starters, any three-phase loads can be protected and switched. They are an integral part of ET 200pro and have the high degree of protection IP65. This makes them ideal for operation in modular, distributed peripherals without control cabinets or control enclosures.

As the result of the protection concept with solid-state overload evaluation and the use of SIRIUS controls size S00, additional advantages are realized on the standard and High Feature motor starters - advantages which soon make themselves positively felt particularly in manufacturing processes with high plant stoppage costs:

- Configuration is made easier by the fine modular structure. When using the ET 200pro motor starters, the list of parts per load feeder is reduced to two main units: the bus module and the motor starter. This makes the ET 200pro ideal for modular machine concepts or solutions for conveying systems and in machine-tool building.
- Expansions are easily possible through the subsequent adding of modules. The innovative plug-in technology also does away with the wiring needed up to now. Through the hot swapping function (disconnection and connection during operation) a motor starter can be replaced within seconds if necessary, without having to shut down the ET 200pro station and with it the process in the plant. The motor starters are therefore recommendable in particular for applications with special demands on availability. Storage costs are optimized in addition by the low level of variance (2 units up to 5.5 kW).

The ordering option for motor starters with a 400 V AC brake output provides the possibility of controlling motors with 400 V AC brakes. With four locally acting inputs available on the High Feature motor starter it is possible to realize autonomous special functions which work independently of the bus and the higher level control system, e.g. as a quick stop on gate valve controls or limit position disconnectors. In parallel with this, the states of these inputs are signaled to the control system.

When using the optional isolator module with switch disconnector and group fusing function for the ET 200pro, the 400 V supply of the motor starters can be switched on and off directly in the field, i.e. locally.

ET 200pro Motor Starters

Safety modules local

Overview

Safety local isolator module

The Safety local isolator module is a maintenance switch with integrated safety evaluation functions that can be parameterized using DIP switches.

It is used for:

- Connection of a 1 or 2-channel EMERGENCY-STOP circuit up to category 3-4/Sil3 (protective door or EMERGENCY-STOP pushbuttons) and parameterizable start behavior
- Control of the 400 V disconnecting module by means of a safety rail signal

400 V disconnecting module

The 400 V disconnecting module enables the safe disconnection of the operational voltage of 400 V up to category 3-4/Sil3. It only functions in combination with the Safety local isolator module.

Application

Safety local isolator module

The Safety local isolator module features the same functions as a standard isolator module with an additional local safety function.

The Safety local isolator module contains a 3TK28 41 module and is equipped with M12 terminals for the connection of external safety components.

Terminals 1 and 2 can be used to connect either 1-channel or 2-channel EMERGENCY-STOP circuits or protective door circuits (IN 1, IN 2).

For monitored starts, an external START switch can be connected to terminal 3.

The required safety functions can be set using 2 slide switches located under the left M12 opening.

In the event of an EMERGENCY-STOP, the Safety local isolator module trips the downstream 400 V disconnecting module. This safely isolates the 400 V circuit up to CAT 4

In combination with the 400 V disconnecting module, the Safety local isolator module can be used for safety applications up to category 4 according to EN 954-1.

400 V disconnecting module

The 400 V disconnecting module can be used together with the Safety local isolator module for local safety applications. It contains two contactors connected in series for safety-oriented disconnection of the main circuit. The auxiliary circuit supply of the device is over a safety power rail in the backplane bus module.

In combination with the 400 V disconnecting module, the Safety local isolator module can be used for safety applications up to category 4 according to EN 954-1.

• Length 50 m	A	6XV1 860-3PN50			1	1 unit	550 7.700
PROFIBUS ECOFAST hybrid cables, non-assembled Trailing cable with 2 x Cu 0.64 mm ² and 4 x Cu 1.5 mm ²							
• Length 50 m	A	6XV1 830-7AN50			1	1 unit	550 7.700
• Length 100 m	A	6XV1 830-7AT10			1	1 unit	550 15.400
PROFIBUS ECOFAST GP hybrid cables, non-assembled Trailing cable with 2 x Cu 0.64 mm ² and 4 x Cu 1.5 mm ²							
• Length 50 m	B	6XV1 860-4PN50			1	1 unit	550 7.700
• Length 100 m	A	6XV1 860-4PT10			1	1 unit	550 15.400
PROFIBUS ECOFAST hybrid connectors 180 ECOFAST Cu, 2 x Cu, 4 x 1.5 mm ² , HANBRID connectors							
• With pin insert, pack of 5	A	6GK1 905-0CA00			1	1 unit	543 0.212
• With female insert, pack of 5	A	6GK1 905-0CB00			1	1 unit	543 0.215
PROFIBUS ECOFAST hybrid connectors, angled ECOFAST Cu, 2 x Cu, 4 x 1.5 mm ² , HANBRID connectors							
• With pin insert, pack of 5	A	6GK1 905-0CC00			1	1 unit	543 0.247
• With female insert, pack of 5	A	6GK1 905-0CD00			1	1 unit	543 0.247
ECOFAST covers for protection of unused bus terminals on ET 200pro; pack of 10 units per packing unit	A	6ES7 194-1JB10-0XA0			1	1 unit	250 0.051

* You can order this quantity or a multiple thereof.

ET 200pro Motor Starters

Components for ET 200pro

Version	DT	Order No.	Price per PU	PU (UNIT, SET, M)	PS*	PG	Weight per PU approx. kg
IM 154-1 and IM 154-2 interface modules (continued)							
Accessories for CM IM DP Direct							
PROFIBUS trailing cables max. acceleration 4 m/s ² , at least 3000000 bending cycles, bending radius at least 60 mm, 2-core, shielded, sold by the meter, minimum order quantity 20 m, maximum order quantity 1000 m	A	6XV1 830-3EH10			1	1 unit	550 0.072
PROFIBUS FC Food bus cables with PE outer sheath for operation in the food and drinks industry, 2-core, shielded, sold by the meter, minimum order quantity 20 m, maximum order quantity 1000 m	A	6XV1 830-0GH10			1	1 unit	550 0.069
PROFIBUS FC Robust bus cables with PUR outer sheath for operation in environments exposed to chemicals and mechanical loads, 2-core, shielded, sold by the meter, minimum order quantity 20 m, maximum order quantity 1000 m	A	6XV1 830-0JH10			1	1 unit	550 0.075
PROFIBUS Hybrid Standard cables PROFIBUS Standard Hybrid cable with 2 power cores (1.5 mm ²) for supplying data and power to the ET 200pro	A	6XV1 860-2R			1	1 unit	550 0.140
PROFIBUS Hybrid Robust cables PROFIBUS Hybrid Robust cable, trailing and resistant to weld spatter, with 2 power cores (1.5 mm ²) for supplying data and power to the ET 200pro	A	6XV1 860-2S			1	1 unit	550 0.135
Power cables 5-core, 5 x 1.5 mm ² , trailing, sold by the meter, minimum order quantity 20 m, maximum order quantity 1000 m	A	6XV1 830-8AH10			1	1 unit	550 0.149
Accessories for CM IM DP M12 7/8"							
PROFIBUS M12 connecting cables Preassembled with two M12 connectors, 5-pole							
• Length 1.5 m	A	6XV1 830-3DH15			1	1 unit	550 0.400
• Length 2.0 m	A	6XV1 830-3DH20			1	1 unit	550 0.480
• Length 3.0 m	A	6XV1 830-3DH30			1	1 unit	550 0.800
• Length 5.0 m	A	6XV1 830-3DH50			1	1 unit	550 1.200
• Length 10 m	A	6XV1 830-3DN10			1	1 unit	550 2.400
• Length 15 m	A	6XV1 830-3DN15			1	1 unit	550 1.240
7/8" connecting cables for power supply 5-core, 5 x 1.5 mm ² , trailing, preassembled with two 7/8" connectors, 5-pole							
• Length 1.5 m	A	6XV1 822-5BH15			1	1 unit	550 0.700
• Length 2.0 m	A	6XV1 822-5BH20			1	1 unit	550 0.780
• Length 3.0 m	A	6XV1 822-5BH30			1	1 unit	550 0.570
• Length 5.0 m	A	6XV1 822-5BH50			1	1 unit	550 3.000
• Length 10 m	A	6XV1 822-5BN10			1	1 unit	550 1.650
• Length 15 m	A	6XV1 822-5BN15			1	1 unit	550 2.540
M12 connectors for ET 200eco, with axial cable feeder							
• With pin insert, pack of 5	A	6GK1 905-0EA00			1	1 unit	543 0.250
• With female insert, pack of 5	A	6GK1 905-0EB00			1	1 unit	543 0.265
7/8" connectors for ET 200eco, with axial cable feeder							
• With pin insert, pack of 5	A	6GK1 905-0FA00			1	1 unit	543 0.265
• With female insert, pack of 5	A	6GK1 905-0FB00			1	1 unit	543 0.250
M12 sealing caps for protection of unused M12 terminals on ET 200pro	►	3RX9 802-0AA00			100	10 units	121 0.100
7/8" sealing caps for protection of unused 7/8" terminals on ET 200pro; pack of 10 units per packing unit	A	6ES7 194-3JA00-0AA0			1	1 unit	250 0.040

ET 200pro Motor Starters

Components for ET 200pro

ET 200X motor starters

Overview

- For switching and protection of any three-phase loads
- Direct-on-line or reversing starters
- Electromechanical or solid-state
- Power bus can be plugged in using the new HAN Q8 plug-in connectors
- Conductor cross-sections up to 4 mm²
- 35 A per segment
- Supplied with different brake contacts as an option.

Application

With the ET 200X motor starters, any three-phase loads, e.g. induction motors, can be protected and switched.

Motor starters are available in two variants:

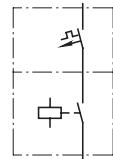

- *Electromechanical motor starters*
for electrical isolation of loads from the network
- *Solid-state motor starters*
 - Suitable for high starting frequency
 - Behavior in case of overload can be selectively configured, e.g. emergency mode in the event of overloading, remote reset by bus after an overload tripping operation

Motor starters can be operated with a hand-held device, making start-ups easier.

ECOFAST Motor Starters and Soft Starters

3RK1 3 ECOFAST motor starters and soft starters

Overview

Distributed motor starters are used for switching and protecting loads locally. Variants with graded functional scope and with different installation possibilities ensure that both the functional requirements of the process and the constructional boundary conditions of the machine or installation are taken into account. Distributed motor starters are available for PROFIBUS DP and AS-Interface.

The starters can be installed close to the motor or mounted on the motor.

The following are available

- Single devices for geographically distributed motors and
- Isolated solutions (ET 200X) for operating mechanisms installed close together.

The functionality in the ECOFAST system ranges from direct-on-line starters, to reversing starters and soft starters through to frequency converters.

Brake contacts are available as an option for the starters. Two or four integrated digital contacts enable sensors to be scanned locally.

All starters are equipped throughout with standardized interfaces for data and energy according to the ECOFAST specification:

- HanBrid for PROFIBUS DP and insulation piercing method for AS-Interface
- Han Q4/2 for the power supply
- Han 10 e for motor connection

The starters can be connected using T pieces for data and T terminal connectors for power to prevent interruption.

The 3RK1 922-3BA00 hand-held device is also available for local operation (see page 6/73).

Detailed technical specifications of the ECOFAST motor starters and soft starters can be found in the manual "ECOFAST Motor Starters".

3RE Encapsulated Starters

General data

Overview

The 3RE1 encapsulated starters are available as direct-on-line starters and as reversing starters.

Direct-on-line starters

The direct-on-line starters are available in three sizes:

- Size **S00** is suitable for induction motors up to 5.5 kW with 400 V AC and a maximum motor rated current of 12 A. The starters are available in the following two variants:
 - Molded-plastic enclosure for direct-on-line starters including contactor – in this case the overload relay must be selected and ordered according to the motor rated current.
 - Molded-plastic enclosure for direct-on-line starters (without contactor) – in this case the contactor and overload relay must be selected and ordered separately.
- Size **S0** is suitable for induction motors up to 11 kW with 400 V AC and a maximum motor rated current of 25 A. The starters are available in the following two variants:
 - Molded-plastic enclosure for direct-on-line starters including contactor – in this case the overload relay must be selected and ordered according to the motor rated current.
 - Molded-plastic enclosure for direct-on-line starters (without contactor) – in this case the contactor, auxiliary switch and overload relay must be selected and ordered separately.
- Size **S2** is suitable for induction motors up to 22 kW with 400 V AC and a maximum motor rated current of 50 A. The starters are available in the following variants:
 - Molded-plastic enclosure for direct-on-line starters (without contactor) – in this case the contactor, auxiliary switch and overload relay must be selected and ordered separately.

Reversing starters

The reversing starters are available in two sizes:

- Size **S00** is suitable for induction motors up to 5.5 kW with 400 V AC and a maximum motor rated current of 12 A. The starters are available in the following two variants:
 - Molded-plastic enclosure for reversing starters including contactor assembly – in this case the overload relay must be selected and ordered according to the motor rated current.
 - Molded-plastic enclosure for reversing starters (without contactor assembly) – in this case the contactor assembly, auxiliary switch and overload relay must be selected and ordered separately.
- Size **S0** is suitable for induction motors up to 11 kW with 400 V AC and a maximum motor rated current of 25 A. The starters are available in the following variants:
 - Molded-plastic enclosure for direct-on-line starters (without contactor assembly) – in this case the contactor assembly, auxiliary switch and overload relay must be selected and ordered separately.

Benefits

The 3RE1 encapsulated starters are enclosed with a high degree of protection (IP65) and are used for the switching and inverse-time delayed protection of loads. They are ideally suited for implementation directly at the machine.

Application

The 3RE1 encapsulated starters are used for switching and for the inverse-time delayed protection of load feeders up to 22 kW at 400 V AC.

The starters are available as direct-on-line starters for motors with a single direction of rotation and as reversing starters for motors with two directions of rotation.
