VLT
THE REAL DRIVE

Contents

PAGE 4	 VLT® AutomationDrive A single drive concept that covers the entire spectrum of drives applications – a major benefit in commissioning, operating and maintaining the equipment. VLT® AutomationDrive comes in a standard version (FC 301) and an advanced high dynamic version (FC 302) with additional functionalities.	PAGE 24	 VLT® Decentral Drive FCD 300 A complete frequency converter designed for decentral mounting. It can be mounted on the machine/wall – close to the motor. The decentral design eliminates the need for space-consuming control cabinets and the need for long screened motor cables is significantly reduced.
PAGE 8	 VLT® HVAC Drive Dedicated HVAC drive that features advanced energy monitoring, system maintenance and motor control. The drive is built on a modular platform that makes it easy to operate, while feeding back all the operation information you need.	PAGE 26	 VLT® DriveMotor FCM 300 Integrated drive-motor solution which combines a VLT® frequency converter and a high standard quality induction motor in a single product. The frequency converter is attached in place of the motor terminal box and it is no higher than the standard terminal box – nor wider or longer than the motor.
PAGE 11	 VLT® Refrigeration Drive Specially designed for the needs of pump, fan and compressor applications. The drive 'speaks' refrigeration language, making setup easy and efficient.	PAGE 28	 VLT® OneGearDrive® A highly efficient permanent-magnet three-phase synchronous motor coupled to an optimised bevel gear box. As part of the Danfoss VLT® FlexConcept® the VLT® OneGearDrive® is an energy-efficient drive system that helps to optimise plant productivity and reduce energy costs.
PAGE 14	 VLT® AQUA Drive The perfect match for pumps and blowers in modern water and wastewater systems, offering advanced application protective features. Available with cascade control of up to 8 pumps in fixed speed mode or master/follower mode.	PAGE 30	 VLT® Integrated Servo Drive System ISD 410 A high performance Integrated Servo Drive system based on PM motor technology. The motion control is integrated in the drive. The communication bus is CAN. It is a system for applications with a variable number of axis and it allows flexible machine structure within food & beverage and packaging.
PAGE 18	 VLT® 2800 Series An extremely compact series of drives designed for side-by-side mounting and developed specifically for the low power market.	PAGE 32	 VLT® Soft Starter MCD 500 A total motor-starting solution with advanced start, stop and protection features, Adaptive Acceleration Control, inside delta connection, 4 line graphical display and multiple programming setup menus.
PAGE 20	 VLT® Micro Drive A compact general purpose drive for AC motors up to 22 kW. It performs perfectly even in complex application set-ups and optimises energy efficiency and operation.	PAGE 34	 VLT® Compact Starter MCD 200 A compact and cost effective soft starter range for applications where direct-on-line starting is undesirable. MCD 200 is, because of its size and functionality, a good alternative to other reduced voltage starting methods such as star/delta starters.
PAGE 22	 VLT® Decentral Drive FCD 302 The new generation of decentral drives based on the VLT® AutomationDrive FC 302 platform. It combines the key features of both products in a completely re-designed enclosure, made for best fit on direct machine mounting.	PAGE 36	 VLT® Soft Starter MCD 100 A cost effective and extremely compact soft starter for AC motors from 1.1 – 11 kW. Due to a unique semiconductor design it is a true "fit and forget" product.

PAGE 38		VLT® Low Harmonic Drive Meets the toughest harmonic requirements under all load/grid conditions. The Danfoss VLT® Low harmonic drive is the first solution combining an active filter and a drive in one package. The VLT® Low harmonic drive continuously regulates harmonic suppression according to the load and grid conditions without affecting the connected motor.	PAGE 52		VLT® Motion Control Tool MCT 10 For managing drive parameters in systems, the Motion Control Tool MCT 10 is the perfect tool to handle all drive-related data.
PAGE 40		12-pulse VLT® drive A robust and cost effective harmonic solution for the higher power range. The Danfoss 12-pulse VLT® drive offers reduced harmonics for demanding industry applications above 250 kW. The 12-pulse VLT® drive is a high efficiency variable frequency converter which is built to the same modular design as the popular 6-pulse VLT® drives.	PAGE 54		VLT® Motion Control Tool MCT 31 With VLT® Motion Control Tool MCT 31, you can determine whether harmonics will be an issue in your installation when drives are added. MCT 31 estimates the benefits of adding various harmonic mitigation solutions from the Danfoss product portfolio and calculates system harmonic distortion.
PAGE 42		VLT® Advanced Active Filter AAF 006 A flexible and adaptable solution for central or de-central harmonic mitigation. Danfoss Advanced Active Filters can compensate for individual VLT® drives as a compact integrated solution or can be installed as a compact stand-alone solution at a point of common coupling, compensating for multiple loads simultaneously. Danfoss Active Filters can operate at medium voltage level by means of a step-down transformer.	PAGE 56		VLT® Energy Box With VLT® Energy Box software you can both theoretically in project face estimate and afterwards physically validate your real energy savings and reductions in your carbon footprint – from your desk.
PAGE 44		VLT® Advanced Harmonic Filter AHF 005/010 The Danfoss Advanced Harmonic Filters have been specially designed to match the Danfoss frequency converters. The solution is available in two variants, AHF 005 and AHF 010, connected in front of a Danfoss frequency converter, the harmonic current distortion generated back to the mains is reduced to 5% and 10% Total Harmonic Current Distortion at full load.	PAGE 58		VLT® Service – Your way DrivePro™ is an efficient productivity programme tailored to meet your specific needs. All the necessary VLT® Service facilities are at your disposal, which will minimize downtime and increase productivity at your factory.
PAGE 46		VLT® Common Mode Filters Common mode filters are placed between the frequency converter and the motor. They are nano-crystalline cores that mitigate high frequency noise in the motor cable (shielded or unshielded) and reduce bearing currents in the motor.			
PAGE 48		VLT® Sine-Wave Filters Sine-Wave filters are placed between the frequency converter and the motor. They are differential-mode low-pass filters that suppress the switching frequency component from the frequency converter and smooth out the phase-to-phase output voltage of the frequency converter to make it sinusoidal. This reduces the motor insulation stress, bearing currents and eliminates the switching acoustic noise from the motor.			
PAGE 50		VLT® dU/dt Filters dU/dt filters are placed between the frequency converter and the motor. They are differential-mode low-pass filters that reduce motor terminal phase-to-phase peak voltage spikes and reduce the rise time to a level that lowers the stress on the insulation of motor windings. dU/dt filters are smaller, weigh less and have a lower price compared to Sine-Wave filters.			

VLT® AutomationDrive

The VLT® AutomationDrive is a single drive concept that covers an entire range of applications, which is a major benefit in commissioning, operating and maintaining the equipment.

The modular open-technology platform that VLT® AutomationDrive is built on makes it exceptionally adaptable and programmable. Its configurable, user-friendly interface supports local languages and letters.

Pluggable options

The drive solution can be adapted to any application due to the flexible option structure. Numerous options are available and can be mounted and tested from factory or be plugged in later for change-over or upgrade.

Adapts to the future

The modular concept of VLT® AutomationDrive makes it highly adaptable – also to future features and options. Modularity offers the benefit of buying on a need-to-have basis without losing future possibilities.

Hot pluggable Control Panel

The Local Control Panel (LCP) can be plugged in directly or connected through a cable for remote commissioning. The LCP can be disconnected during operation and replaced with a blind cover. Settings are easily transferred via the LCP from one drive to another or from a PC to a drive with the VLT® Motion Control Tool MCT 10.

Feature	Benefit
Reliable	Maximum uptime
Ambient temperature 50° C without derating (D-frame 45° C)	Less need for cooling or oversizing
Available in IP 00, 20, 21, 54, 55 and 66 enclosures	Suitable for harsh and wash down areas
Resistant to wear and tear	Low lifetime cost
Back-channel cooling for frame D, E and F frames	Prolonged lifetime of electronics
User-friendly	Saves commissioning and operating cost
Plug-and-Play technology	Easy upgrade and change over
Awarded control panel	User-friendly
Intuitive VLT® interface	Saves time
Pluggable cage clamp connectors	Easy connection
Exchangeable languages	User-friendly
Intelligent	
Intelligent warning systems	Warning before controlled stop
Smart Logic Control	Reduces need for PLC capacity
Advanced plug-in features	Easy commissioning
Safe stop	Safety cat. 3 (ISO13849-1), PL d (ISO 13849-1), Stop cat. 0 (EN 60204-1)
STO: Safe Torque Off (IEC 61800-5-2)	SIL 2 (IEC 61508) SIL CL 2 (IEC 62061)
Intelligent heat management	Intelligent heat management

Awarded

VLT® AutomationDrive has received the Frost & Sullivan award for innovation and the iF Design Award for its user-friendliness.

Power range

3 x 200 – 240 V	0.25 – 37 kW
3 x 380 – 500 V	0.37 – 1000 kW
3 x 525 – 600 V	0.75 – 75 kW
3 x 525 – 690 V	1.1 – 1400 kW

Options

The following options are available:

Fieldbus options

- VLT® PROFIBUS DP MCA 101
- VLT® DeviceNet MCA 104
- VLT® CanOpen MCA 105
- VLT® PROFIBUS Converter MCA 113
- VLT® PROFIBUS Converter MCA 114
- VLT® PROFINET MCA 120
- VLT® Ethernet/IP MCA 121
- VLT® Modbus TCP MCA 122
- VLT® POWERLINK MCA 123
- VLT® EtherCAT MCA 124
- VLT® DeviceNet Converter MCA 194

I/O and feedback options

- VLT® General Purpose I/O MCB 101
- VLT® Encoder Input MCB 102
- VLT® Resolver Input MCB 103
- VLT® Relay Card MCB 105
- VLT® 24 V External Supply MCB 107
- VLT® Extended Relay Card MCB 113
- VLT® Sensor Input MCB 114

Safety options

- VLT® Safe PLC I/O MCB 108
- VLT® PTC Thermistor Card MCB 112
- VLT® Safe Option MCB 140 Series
- VLT® Safe Option MCB 150 Series

Brake chopper (IGBT) option

Connected to an external brake resistor, the built-in brake chopper limits the load on the intermediate circuit in the case the motor acts as a generator.

Motion Control Options

- VLT® Motion Control Option MCO 305
- VLT® Synchronizing Controller MCO 350
- VLT® Position Controller MCO 351
- VLT® Center Winder MCO 352

Power options

- Brake resistors
- Sine-Wave Filters
- dU/dt Filters
- Harmonic Filters (AHF)

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	200 – 240 V $\pm 10\%$ FC 301: 380 – 480 V $\pm 10\%$ FC 302: 380 – 500 V $\pm 10\%$, 525 – 600 V $\pm 10\%$ 525 – 690 V $\pm 10\%$
Supply frequency	50/60 Hz
True Power Factor (λ)	0.92 nominal at rated load
Displacement Power Factor ($\cos \phi$) near unity	(> 0.98)
Switching on input supply L1, L2, L3	Maximum 2 times/min.

Output data (U, V, W)	
Output voltage	0 – 100% of supply voltage
Output frequency	FC 301: 0.2 – 590 Hz (0.25 – 75 kW) FC 302: 0 – 590 Hz (0.25 – 75 kW) 0 – 590 Hz (90 – 1200 kW) 0 – 300 Hz (Flux mode)
Switching on output	Unlimited
Ramp times	1–3600 sec.

*Note: 160% current can be provided for 1 minute.
Higher overload rating is achieved by oversizing the drive.*

Digital inputs	
Programmable digital inputs	FC 301: 4 (5) / FC 302: 4 (6)
Logic	PNP or NPN
Voltage level	0 – 24 VDC

Note: One/two digital inputs can be programmed as digital output for FC 301/FC 302.

Analogue input	
Analogue inputs	2
Modes	Voltage or current
Voltage level	FC 301: 0 to +10 V FC 302: -10 to +10 V (scaleable)
Current level	0/4 to 20 mA (scaleable)

Pulse/encoder inputs	
Programmable pulse/encoder inputs	FC 301: 1 / FC 302: 2
Voltage level	0 – 24 V DC (PNP positive logic)

Digital output*	
Programmable digital/pulse outputs	FC 301: 1 / FC 302: 2
Voltage level at digital/frequency output	0 – 24 V

Analogue output*	
Programmable analogue outputs	1
Current range	0/4 – 20 mA

Relay outputs*	
Programmable relay outputs	FC 301: 1 / FC 302: 2

Cable lengths	
Max. motor cable lengths	FC 301: 50 m / FC 302: 150 m (screened/armoured) FC 301: 75 m / FC 302: 300 m (unscreened/unarmoured)

**More analogue and digital inputs/outputs can be added by options.*

Other accessories

- IP 21/NEMA 1 Kit (convert IP 20 to IP 21)
- PROFIBUS adapter
- Sub-D9 Connector
- Decoupling plate for fieldbus cables
- USB connection cable to PC
- Panel Through option
- LCP panel mounting kit
- Mounting brackets
- Mains disconnect option

High power options

- IEC Emergency stop with Safety Relay
- Safety Stop with Safety Relay
- RFI Filters
- NAMUR terminals
- RCD
- IRM
- Mains shielding
- Regen terminals

Please see the VLT® High Power Drive Selection Guide for the complete range of options.

VLT® HVAC Drive

The VLT® HVAC Drive series is available in a wide power range designed for all HVAC applications. An advanced drive built on HVAC dedication.

The VLT® HVAC Drive is a full-featured, HVAC dedicated drive with built-in intelligence.

The VLT® HVAC Drive has a vast number of functions developed to meet the diverse needs of the HVAC business.

It is the perfect match for pumps, fans and compressors in modern buildings that are fitted with increasingly sophisticated solutions.

Product range

3 x 200 – 240 V.....	1.1 – 45 kW
3 x 380 – 480 V.....	1.1 – 1000 kW
3 x 525 – 600 V.....	1.1 – 90 kW
3 x 525 – 690 V.....	55 – 1400 kW

With 110% over load torque

Available enclosure ratings

IP 00.....	45 – 630 kW
IP 20.....	1.1 – 400 kW
IP 21 (NEMA 1).....	1.1 – 1400 kW
IP 54 (NEMA 12).....	55 – 1400 kW
IP 55 (NEMA 12).....	1.1 – 90 kW
IP 66 (NEMA 4X indoor).....	1.1 – 90 kW

Optional coating providing extra protection for aggressive environments.

Feature	Benefit
All built-in – low investment	
Modular product concept and a wide range of options	Low initial investment – max. flexibility, later upgrade possible
Dedicated HVAC I/O functionality for temperature sensors etc.	External conversion saved
Decentral I/O control via serial communication	Reduced wiring costs, and external controller I/O saved
Wide range of HVAC protocols for BMS controller connectivity	Less extra gateway solutions needed
4 x auto tuned PID's	No external PID controller needed
Smart Logic Controller	Often makes PLC unnecessary
Real Time Clock	Enables daily and weekly settings
Integrated fan, pump and compressor functionality i.e.	Saves external control and conversion equipment
Fire Override Mode, Dry run Detection Constant Torque etc.	Protects equipment and saves energy
Back-channel cooling for frame D, E and F frame	Prolonged lifetime of electronics
Save energy – less operation cost	
Automatic Energy Optimizer function, advanced version	Saves 5 – 15% energy
Advanced energy monitoring	Overview on energy consumption
Energy saving functions i.e. flow compensation, sleep mode etc.	Saves energy
Unequalled robustness – maximum uptime	
Robust single enclosure	Maintenance-free
Unique cooling concept with no ambient air flow over electronics	Problem-free operation in harsh environments
Max ambient temp. 50° C without derating (D-frame 45° C)	No external cooling or oversize necessary
User-friendly – save commissioning and operating cost	
Smart start	Quick and precise start-up
Awarded graphical display, 27 languages	Effective commissioning and operation
USB plug and play connection	Easy to use PC software tools
Global HVAC support organisation	Local service – globally
Built-in DC coils and RFI filters – no EMC concerns	
Integrated DC link harmonic filters	Small power cables. Meets EN 61000-3-12
Integrated EMC filters	Meets EN 55011 Class B, A1 or A2

Application options

A wide range of integrated HVAC options can be fitted in the drive:

VLT® General Purpose I/O MCB 101

3 digital inputs, 2 digital outputs,
1 analogue current output,
2 analogue voltage inputs.

VLT® Relay Card MCB 105

Adds 3 relay outputs

VLT® Analog I/O MCB 109

3 PT1000/Ni1000 inputs, 3 analogue
voltage outputs and back-up power
for Real-Time Clock.

VLT® 24 V External Supply MCB 107

24 V DC external supply can be con-
nected to supply, control and option
cards.

Sensor input card

Sensor input card for motor protec-
tion with 2 or 3 PT100 or PT1000
inputs (VLT® Sensor Input MCB 114).

Brake chopper (IGBT) option

Connected to an external brake
resistor, the built-in brake chopper
limits the load on the intermediate
circuit in the case the motor acts as a
generator.

Power options

A wide range of external power options
are available for VLT® HVAC Drive in
critical networks or applications:

- **Advanced Harmonic Filters:**
For critical demands on harmonic
distortion
- **dU/dt filters:** For special demands
on motor isolation protection
- **Sine-Wave filters**

HVAC PC software tools

- **VLT® Motion Control Tool MCT 10:**
Ideal for commissioning
and servicing the drive
- **VLT® Energy Box:** Comprehensive
energy analysis tool. Energy con-
sumption with and w/o drive can
be calculated (drive payback time).
Online function for accessing drives
energy log.
- **VLT® Motion Control Tool MCT 31:**
Harmonics calculations tool

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	200–240 V ±10% 380–480 V ±10% 525–600 V ±10% 525–690 V ±10%
Supply frequency	50/60 Hz
Displacement Power Factor (cos φ) near unity	(> 0.98)
Switching on input supply L1, L2, L3	1–2 times/min.
Output data (U, V, W)	
Output voltage	0–100% of supply voltage
Switching on output	Unlimited
Ramp times	1–3600 sec.
Output frequency	0–590 Hz
Digital inputs	
Programmable digital inputs	6*
Logic	PNP or NPN
Voltage level	0–24 VDC
* 2 can be used as digital outputs	
Pulse inputs	
Programmable pulse inputs	2*
Voltage level	0–24 VDC (PNP positive logic)
Pulse input accuracy	(0.1–110 kHz)
* Utilize some of the digital inputs

Analogue inputs	2
Modes	Voltage or current
Voltage level	0 V to +10 V (scaleable)
Current level	0/4 to 20 mA (scaleable)
Analogue output	
Programmable analogue outputs	1
Current range at analogue output	0/4–20 mA
Relay outputs	
Programmable relay outputs	2 (240 VAC, 2 A and 400 VAC, 2 A)
Fieldbus communication	
Standard built-in: FC Protocol N2 Metasys FLN Apogee Modbus RTU BACnet embedded	Optional: VLT® LonWorks MCA 108 VLT® BACnet MCA 109 VLT® DeviceNet MCA 104 VLT® PROFIBUS DP MCA 101

High power options

- IEC Emergency stop with
Safety Relay
 - Safety Stop with Safety Relay
 - RFI Filters
 - NAMUR terminals
 - RCD
 - IRM
 - Mains shielding
 - Regen terminals
- Please see the VLT® High Power Drive Selection Guide
for the complete range of options.

The Danfoss EC+ concept...

... enables the use of PM motors in
IEC-standard sizes with Danfoss VLT®
frequency converters. After entering the
relevant motor data, you benefit from
the high engine efficiency at EC tech-

nology level in all applications. Neces-
sary control method has been embed-
ded in dedicated VLT® series drives.

Benefits of the EC + concept:

- Free choice of motor technology:
PM or asynchronous with same
frequency converter
- Operation and installation of the
VLT® drive remain the same
- Vendor-independent selection of all
components
- Best system efficiency by combining
efficiency-optimized components
- Retrofit of existing plants
- Support a broad range of standard
and PM motors

VLT® Refrigeration Drive

Dedicated

to refrigeration application

The VLT® Refrigeration Drive FC 103 is designed to suit fans, pumps and compressors in any kind of refrigeration application.

Regardless if you want to operate compressors, pumps or fans, the VLT® Refrigeration Drive FC 103 provides you the possibility to save energy and extend the lifetime of the components.

Speed control provides many benefits in all motor driven parts of refrigeration applications. The VLT® Refrigeration Drive moves the user in the position to profit from this in a very simple way.

One drive for all

The VLT® Refrigeration Drive FC 103 covers a power range between 1.1-315 kW. Available in a variety of protection classes the drive suits the needs of pump, fan and compressor applications. Every application and power size can be operated and programmed with the same common user interface.

Easy commissioning

The VLT Refrigeration Drive FC 103 offers a setup Wizard, using common refrigeration terms rather than computer language, making installation quick and easy for service technicians and installers. The wizard menu also supports the commissioning engineers if they encounter any problems. The menu will help the engineer troubleshoot and offer solutions to get the drive up and running again if there is a problem.

Feature	Benefit
Robust single enclosure	Maintenance free
Protection classes IP 20/21/55/66	Fits every application
Coated electronics (class 3C2 or 3C3)	Withstands challenging environments
Max. ambient temp. 50° C without derating (D-frame 45° C)	No external cooling or oversize necessary
Software features	Benefits
Sleep mode	Optimum system efficiency
Thermostat/Pressostat function	System protection
Fieldbus (AKD LON, Modbus RTU...)	Open for all kind of controllers
Velocity-to-flow conversion	Saves costs
Day/Night Control	Reduces wear and energy consumption
Advanced energy monitoring	Overview of energy consumption
Pressure to temperature conversion	Saves costs
Compressor features	Benefits
High starting torque	Operates all types of compressor
PO optimization	Optimum system efficiency
Injection on/off	Improves refrigeration processes
Discharge temperature monitor	Protects the compressor
Pack controller	Saves energy and reduce maintenance
Neutral zone controller	Handling of unsymmetrical zones
Pump features	Benefits
Pump cascade controller	Saves energy and reduce maintenance
Dry pump protection and end of curve	Protects the pump
Flow compensation	Saves energy
Fan features	Benefits
Broken belt detection	Protects the system
Operate induction motors in parallel	Reduces investment cost
Automatic Energy Optimizer AEO function	Saves energy
No EMC concerns	Benefits
Integrated DC link harmonic filters	Low harmonic load on mains
Integrated EMC filters	No external filters required

VLT® Refrigeration Drive – continued

Product range

3 x 200 – 240 V 1.1 – 45 kW
 3 x 380 – 480 V 1.1 – 315 kW
 3 x 525 – 600 V 1.1 – 90 kW
 With 110% overload torque

Available enclosure ratings

IP 20 (NEMA 1) 1.1 – 315 kW
 IP 21 (NEMA 1) 1.1 – 315 kW
 IP 54 (NEMA 12) 110 – 315 kW
 IP 55 (NEMA 12) 1.1 – 90 kW
 IP 66 (NEMA 4X) 1.1 – 90 kW

Standard coating providing extra protection for aggressive environments.

Options

A wide range of VLT® Refrigeration Drive FC 103 options are available mounted and tested from the factory or as plug-and-play options for later upgrades.

VLT® General purpose I/O MCB 101

3 digital inputs, 2 digital outputs,
 1 analogue current output,
 2 analogue voltage inputs

VLT® Relay Card MCB 105

3 relay outputs

VLT® Analogue I/O MCB 109

3 Pt1000/Ni1000 inputs,
 3 analogue voltage outputs
 Buffer for Real Time Clock

VLT® 24 V External Supply MCB 107

24 V DC external supply can be connected to supply control- and option cards.

Filters

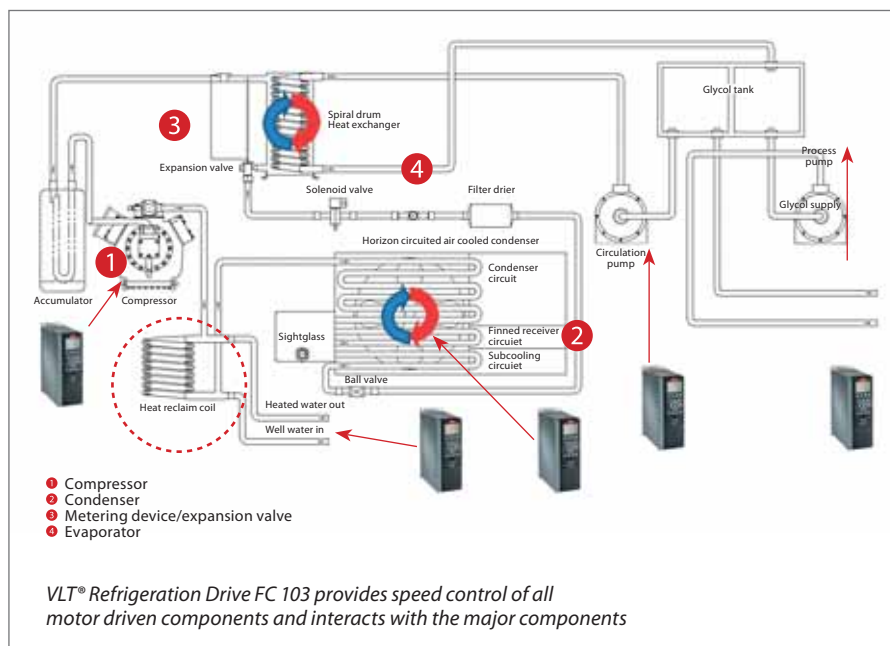

- **Advanced Harmonic Filters:**
For critical demands on harmonic distortion
- **dU/dt filters:**
For special demands on motor isolation protection
- **Sine-Wave filters:**
For noiseless motor operation or special demands on motor isolation protection

PC software tools

- **VLT® Motion Control Tool MCT 10:**
Ideal for commissioning and servicing the drive

VLT® AQUA Drive

Dedicated

features for water applications

User friendly setup of water and pump settings reduces installation time ensuring maximum energy efficiency and motor control.

Optimized drive for AC motor driven water and wastewater applications. User friendly setup makes installation easy and enables owners to reach the highest level of performance and lowest cost of ownership.

Featuring a wide range of powerful, standard features, which can be expanded with performance improving options, the VLT® AQUA Drive is equally suited to both new and retrofit projects.

Set up the drive quickly and easily with the user friendly quick menu. By collecting the most important water and pump parameters in one place, the risk of incorrect configuration is reduced significantly.

Instantly benefit from high efficiency, fast payback and the lowest overall cost of ownership for water and wastewater applications.

Power range

1 x 200 – 240 V AC:	1.1 – 22 kW
1 x 380 – 480 V AC:	7.5 – 37 kW
3 x 200 – 240 V AC:	0.25 – 45 kW
3 x 380 – 480 V AC:	0.37 – 1000 kW
3 x 525 – 600 V AC:	0.75 – 90 kW
3 x 525 – 690 V AC:	11 – 1400 kW

Feature	Benefit
Dedicated features	
Dry run detection	Protects the pump
Flow compensation function	Saves energy
2 step ramps (initial/final ramp)	Protects deep well pumps
Check valve ramp	Protects against water hammering and saves installation cost for soft close valves
Pipe fill mode	Eliminates water hammering
Built-in motor alternation feature	Duty stand by operation, cost reduction
Sleep Mode	Saves energy
No/low flow detection	Protects the pump
End of pump-curve detection	Pump protection, leakage detection
Pump cascade controller	Lower equipment cost
Built-in Smart Logic Controller	Often makes PLC omissible
Deragging	Preventive/reactive pump cleaning
Back-channel cooling for frame D, E and F	Prolonged lifetime of electronics
Energy saving	
VLT® efficiency (98%)	Saves energy
Automatic Energy Optimisation (AEO)	Saves 3 – 8% energy
Auto Tuning of Staging Speeds	Smoothens the staging and saves energy
Reliable	
Maximum uptime	
IP 00 – IP 66 enclosures (depending on power size)	Choose the protection class you need
All power sizes available in IP 54/55 enclosures	Broad usability in standard enclosure
Password protection	Reliable operation
Mains disconnect switch	No need for external switch
Optional, built-in RFI suppression	No need for external modules
One Wire safe stop	Safe operation/less wiring
Max. ambient temperature up to 50°C without derating (D-frame 45°C)	Reduced need for cooling
User-friendly	
Save initial and operation cost	
One drive type for the full power range	Less learning required
Intuitive user interface	Time saved
Integrated Real Time Clock	Lower equipment cost
Modular design	Enables fast installation of options
Auto tuning of PI-controllers	Time saved
Payback time indication	Monitor performance

Application options

Extend the functionality of the drive with integrated options:

VLT® General Purpose I/O MCB 101

3 digital inputs, 2 digital outputs,
1 analogue current output,
2 analogue voltage inputs.

VLT® Extended Cascade Controller MCO 101, VLT® Advanced Cascade Controller MCO 102

Upgrade the built-in cascade controller to operate more pumps with higher energy efficiency using master/follower pump control. Run the pumps in use at the same speed and optimise staging speeds automatically during operation. Runtime of all pumps is balanced to distribute wear and tear evenly.

VLT® Sensor Input MCB 114

Monitors the PT100/PT1000 and protects motors from overheating.

VLT® PTC Thermistor Card MCB 112

The MCB 112 is connected to safe stop and protects the motor from overheating. It is approved for controlling a certified Ex proof motor in a potentially explosive atmosphere (ATEX) in zones 1 + 2 (gas) zones 21 + 22 (dust).

VLT® 24 V External Supply MCB 107

Back-up option to keep the control system alive during mains loss.

Coated PCB available

For harsh environments according to levels in IEC61721-3-3, standard 3C2, optional 3C3.

Relay & Analogue I/O option

(VLT® Relay Card MCB 105, VLT® Analog I/O MCB109)

Flexible I/O options adding 3 relays or 3 analogue inputs and 3 analogue outputs respectively.

High power options

See the VLT® High Power Drive Selection Guide for a complete list.

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	200 – 240 V $\pm 10\%$, 380 – 480 V $\pm 10\%$, 525 – 600 V $\pm 10\%$, 525 – 690 V $\pm 10\%$
Supply frequency	50/60 Hz
Displacement Power Factor (cos ϕ) near unity	(> 0.98)
True power factor (λ)	≥ 0.9
Switching on input supply L1, L2, L3	1 – 2 times/min.
Output data (U, V, W)	
Output voltage	0 – 100% of supply
Switching on output	Unlimited
Ramp times	0.1 – 3600 sec.
Output frequency (dependent on power size)	590 Hz
Note: VLT® AQUA Drive can provide 110% current for 1 minute. Higher overload rating is achieved by oversizing the drive.	
Digital inputs	
Programmable digital inputs	6*
Logic	PNP or NPN
Voltage level	0 – 24 V DC
* Two of the inputs can be used as digital outputs.	
Analogue inputs	
Number of analogue inputs	2
Modes	Voltage or current
Voltage level	-10 to +10 V (scaleable)
Current level	0/4 to 20 mA (scaleable)
Pulse inputs	
Programmable pulse inputs	2
Voltage level	0 – 24 V DC (PNP positive logic)
Pulse input accuracy	(0.1 – 110 kHz)
* Two of the digital inputs can be used for pulse inputs.	
Analogue output	
Programmable analogue outputs	1
Current range at analogue output	0/4 – 20 mA
Relay outputs	
Programmable relay outputs	2 (240 VAC, 2 A and 400 VAC, 2 A)
Fieldbus Communication	
FC Protocol and Modbus RTU built-in (Optional: Modbus TCP, Profibus, Profinet, DeviceNet, Ethernet IP)	
Ambient temperature	
Up to 55°C (50°C without derating; D-frame 45°C)	

Power options

Choose from a wide range of external power options for use with our drive in critical networks or applications:

- **VLT® Low Harmonic Drive:** Optimum reduction of harmonic distortion with built-in active filter.
- **VLT® Advanced Harmonic Filter:** For applications where reducing harmonic distortion is critical.
- **VLT® dU/dt filter:** Provides motor isolation protection.
- **VLT® Sine-Wave filter**

PC software tools

- **VLT® Motion Control Tool MCT 10**
Ideal for commissioning and servicing the drive, including guided programming of cascade controller, real time clock, smart logic controller and preventive maintenance.
- **VLT® Energy Box**
Comprehensive energy analysis tool. Energy consumption with and w/o drive can be calculated (drive payback time). Online function for accessing drives energy log.
- **VLT® Motion Control Tool MCT 31**
Harmonics calculations tool.

* Release in Q1, 2013

VLT® 2800 Series

The VLT® 2800 series has been developed for the low power market. The drive is extremely compact and prepared for side-by-side mounting. The concept is modular with a power module and a control module.

The VLT® 2800 series is designed for stable operation in industrial environments.

Power range

1/3 x 200 – 240 V.....0.37 – 3.7 kW

3 x 380 – 480 V.....0.55 – 18.5 kW

With 160% overload torque (normal overload)

Feature	Benefit
Automatic Motor Tuning	<ul style="list-style-type: none"> – Ensure optimal match between drive and motor – Increasing performance
PID-controller	Optimum process control
Interrupt start/stop	High repeatability of positional accuracy
Dry run detection	No need for specific detection equipment
Fieldbus communication	<ul style="list-style-type: none"> – Allows for control and surveillance of the drives from a PC or a PLC – Profibus and DeviceNet are available
Reliable	Maximum uptime
Built-in RFI filter	Compliance with the EMC standard EN 55011 1A
Enhanced sleep mode	Excellent control for shutting down the pump at low flow
Max. ambient temperature 45° C without derating	No external cooling or oversizing necessary
User-friendly	Saves commissioning and operating cost
Quick Menu	Easy to use
Pipe Fill mode	Prevents water hammering
Fieldbus communication	<ul style="list-style-type: none"> – Allows for control and surveillance of the drives from a PC or a PLC – Profibus and DeviceNet are available

PC software tools

- **VLT® Motion Control Tool MCT 10:**
Ideal for commissioning and servicing the drive.
- **VLT® Motion Control Tool MCT 31:**
Harmonics calculations tool.

RFI filter

The RFI filter ensures that the frequency converter will not disrupt other electrical components that are connected to the mains and might cause operating disruption.

By fitting an RFI 1B filter module between the mains supply and the VLT® 2800, the solution complies with the EMC norm EN 55011-1B.

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	200-240 V $\pm 10\%$, 380-480 V $\pm 10\%$
Supply frequency	50/60 Hz
Displacement Power Factor ($\cos \varphi$) near unity	(> 0.98)
Switching on input supply L1, L2, L3	1-2 times/min.
Output data (U, V, W)	
Output voltage	0-100% of supply voltage
Switching on output	Unlimited
Ramp times	1-3600 sec.
Closed loop	0-132 Hz
Digital inputs	
For start/stop, reset, thermistor, etc.	5
Logic	PNP or NPN
Voltage level	0-24 V DC
Analogue input	
No. of analogue inputs	2
Voltage level	-10 to +10 V (scaleable)
Current level	0/4 to 20 mA (scaleable)
Pulse inputs	
No. of pulse inputs	2
Voltage level	0-24 V DC (PNP positive logic)
Pulse input accuracy	(0.1-110 kHz)
Digital output	
No. of digital outputs	1
Analogue output	
Programmable analogue outputs	1
Current range	0/4-20 mA
Relay outputs	
No. of relay outputs	1
Fieldbus communication	
RS485	
Ambient temperature	
50°C	

		Power	Input current

VLT® Micro Drive

The VLT® Micro Drive is a general purpose drive that can control AC motors up to 22 kW. It's a small drive with maximum strength and reliability.

VLT® Micro Drive is a full member of the VLT® family sharing the overall quality of design, reliability and user-friendliness.

Due to high quality components and genuine VLT® solutions, VLT® Micro Drive is extremely reliable.

RoHS compliant

The VLT® Micro Drive is manufactured with respect for the environment, and it complies with the RoHS Directive.

Power range

1 phase 200–240 V AC 0.18–2.2 kW
3 phase 200–240 V AC 0.25–3.7 kW
3 phase 380–480 V AC 0.37–22 kW

Feature	Benefit
User friendly	
Minimum commissioning	Saves time
Mount – connect – go!	Minimum effort – minimum time
Copy settings via local control panel	Easy programming of multiple drives
Intuitive parameter structure	Minimal manual reading
Complies with VLT® software	Saves commissioning time
Self-protecting features	Lean operation
Process PI-controller	No need for external controller
Automatic Motor Tuning	Ensure optimal match between drive and motor
150% motor torque up to 1 minute	Plenty of brake-away and acceleration torque
Flying start (catch a spinning motor)	Doesn't trip when started on a spinning (freewheeling) motor
Electronic Thermal Relay (ETR)	Replaces external motor protection
Smart Logic Controller	Often makes PLC unnecessary
Built-in RFI filter	Saves cost and space
Energy saving	
Energy efficiency 98%	Minimises heat loss
Automatic Energy Optimisation (AEO)	Saves 5-15% energy in HVAC applications
Reliable	
Earth fault protection	Protects the drive
Over temperature protection	Protects the motor and drive
Short circuit protection	Protects the drive
Optimum heat dissipation	Longer lifetime
Unique cooling concept with no forced air flow over electronics	Problem-free operation in harsh environments
High quality electronics	Low lifetime cost
High quality capacitors	Tolerates uneven mains supply
All drives full load tested from factory	High reliability
Dust resistant	Increased lifetime
RoHS compliant	Protects the environment
Designed for WEEE	Protects the environment

Coated PCB standard

For harsh environments.

Power options

Danfoss VLT Drives offers a range of external power options for use together with our drives in critical networks or applications:

■ VLT® Advanced Harmonic Filter:

For applications where reducing harmonic distortion is critical.

PC software tools

■ VLT® Motion Control Tool MCT 10:

Ideal for commissioning and servicing the drive including guided programming of cascade controller, real time clock, smart logic controller and preventive maintenance.

■ VLT® Energy Box:

Comprehensive energy analysis tool, shows the drive payback time.

■ VLT® Motion Control Tool MCT 31:

Harmonics calculations tool.

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	1 x 200–240 V \pm 10%, 3 x 200–240 V \pm 10% 3 x 380–480 V \pm 10%
Supply frequency	50/60 Hz
Displacement Power Factor (cos ϕ) near unity	(> 0.98)
Switching on input supply L1, L2, L3	1–2 times/min.
Output data (U, V, W)	
Output voltage	0–100% of supply voltage
Output frequency	0–200 Hz (VVC+ mode), 0–400 Hz (U/f mode)
Switching on output	Unlimited
Ramp times	0.05–3600 sec
Digital inputs	
Programmable digital inputs	5
Logic	PNP or NPN
Voltage level	0–24 VDC
Pulse inputs	
Programmable pulse inputs	1*

VLT® Control Panel LCP 12 With potentiometer: 132B0101

VLT® Decentral Drive FCD 302

IP 66

enclosure

for conveyor applications, installations in wash-down areas or widely distributed applications with a large number of drives

The VLT® Decentral Drive FCD 302 is the new generation of the VLT® Decentral Drive FCD 300, based on the VLT® AutomationDrive FC 302 platform. Combining the key features of both products in a completely re-designed enclosure, the drive is made for the best fit for direct machine mounting.

Designed for simplicity and robustness the new VLT® Decentral Drive FCD 302 is a user-friendly product with high performance and strong protection degree.

Decentral drives are meant for decentral mounting, eliminating the need for space-consuming control cabinets. With the drives placed near the motor, there is no need for long screened motor cables.

One-box concept

All options are built into the unit, reducing the number of boxes to be mounted, connections and terminations in the installation. Consequently labor costs for mounting and risk of failures are dramatically reduced.

Power range

0.37 – 3 kW, 3 x 380 – 480 V

Feature	Benefit
Reliable	Maximum uptime
Pluggable twin-part design (installation box and electronic part)	Easy and fast service
Integrated lockable service switch available	Local disconnection possible
User-friendly	Saves commissioning and operation cost
Smooth surface	Easy cleaning; no dirt trap
Adapts to any brand of motor and geared motor, induction as well as permanent magnet motors	Easy and flexible installation
Integrated power and fieldbus looping terminals	Cable savings
Visible LEDs	Quick status check
Set-up and control through pluggable control panel, fieldbus communication and set-up software VLT® Motion Control Tool MCT 10	Easy commissioning
Awarded control panel with on-board manual (accessory)	Easy operation
Screwless spring-loaded terminals	Easy and fast connection
Integrated USB port	Direct connection to PC
Intelligent	Built-in feature
Smart Logic Control	Reduces need for PLC capacity
Safe Torque Off (Safe Stop) as standard	Reduces the need for extra components
Intelligent warning systems	Warning before controlled stop

Enclosure

- IP 66 standard black
 - IP 66 standard white
 - IP 66 hygienic white
- (all enclosures are rated as NEMA 4X)

Integrated 24 V supply

24 V DC control supply is provided by the drive. Separate supply terminals have been made for remote I/Os distribution.

Power looping

The new FCD 302 facilitates internal power looping. Terminals for 6 mm² (big box) or 4 mm² (small box) power cable inside the enclosure allows connection of multiple units in the same branch.

Ethernet switch

Integrated Ethernet switch/ hub with the two RJ-45 ports are available in the drive for easy daisy-chaining of Ethernet communication. Fieldbuses are routed easily, without adding commissioning time, by connecting Ethernet or Profibus based fieldbuses to a M12 pluggable interface.

Safety

The VLT® Decentral Drive FCD 302 is delivered as standard with the Safe Torque Off (Safe Stop) function in compliance with EN ISO 13849-1 Category 3 PL d and SIL 2 according to IEC 61508 low demand and high demand mode.

Fieldbus options

(integrated into the control card)

- PROFIBUS DP
- PROFINET
- EtherNet/IP

Application options

- VLT® Encoder Input MCB 102
- VLT® Resolver Input MCB 103
- VLT® Safe PLC I/O MCB 108

Hardware options

- Mounting brackets
- Service switch
- Internal circuit breaker
- M12 sensor plugs
- 24 V DC input for control supply
- Brake chopper
- Electromechanical brake control and supply
- Fieldbus plugs

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	380 – 480 V ±10%
Supply frequency	50/60 Hz
True Power Factor (λ)	0.92 nominal at rated load
Displacement Power Factor (cos φ)	(>0.98)
Switching on input supply	2 times/min.
Output data (U, V, W)	
Output voltage	0 – 100% of supply
Output frequency	0 – 590 Hz 0 – 300 Hz (Flux mode)
Switching on output	Unlimited
Ramp times	0.01 – 3600 sec.
Digital inputs	
Programmable digital inputs	4 (6)
Logic	PNP or NPN
Voltage level	0 – 24 V DC
<i>Note: One/two digital inputs can be programmed as digital output</i>	
Analogue inputs	
Number of analogue inputs	2
Modes	Voltage or current
Voltage level	-10 to +10 V (scaleable)
Current level	0/4 – 20 mA (scaleable)
Pulse/encoder inputs	
Programmable pulse/encoder inputs	2
Voltage level	0 – 24 V DC (PNP positive logic)
Digital output	
Programmable digital/pulse outputs	2
Voltage level at digital/frequency output	0 – 24 V
Analogue output	
Programmable analogue outputs	1
Current range	0/4 – 20 mA
Relay outputs	
Programmable relay outputs	2
Integrated 24 V supply	
Max. load	600 mA

VLT® Decentral Drive FCD 300

The VLT® Decentral Drive FCD 300 is a complete frequency converter designed for decentral mounting. It can be mounted on the machine or wall close to the motor, or directly on the motor.

The VLT® Decentral Drive FCD 300 comes in very robust enclosure, with a special painting treatment to withstand harsh environments and typical cleaning agents used in wash-down areas. Its design offers a smooth cleaning-friendly surface.

The decentral design reduces the need for central control panels and eliminates the need for space-consuming motor control cabinets. The need for long screened motor cables is significantly reduced.

Feature	Benefit
Reliable	Maximum uptime
Special surface treatment as protection against aggressive environments	Easy cleaning; no dirt trap
Twin part design (installation box and electronic part)	Easy and fast service
Integrated lockable service switch available	Local disconnection possible
Full protection is offered	Protects the motor and drive
User-friendly	Saves commissioning and operating cost
Adapts to any brand of motor and geared motor	Easy and flexible installation
Designed for power and fieldbus looping	Cable savings
Visible LEDs	Quick status check
Set-up and controlled through a remote control panel or fieldbus communication and dedicated MCT 10 set-up software	Easy commissioning

Power range

0.37 – 3.3 kW, 3 x 380 – 480 V

Enclosure

IP 66/Type 4X (indoor)

Central Vs. Decentral concept

Robust cleaning-friendly surface

Hot pluggable LCP

Plug-and-drive

The bottom section contains maintenance-free Cage Clamp connectors and looping facilities for power and fieldbus cables. Once installed, commissioning and upgrading can be performed in no time by plugging in another control lid.

Flexible installation

The FCD 300 series facilitates internal power line and fieldbus looping. Terminals for 4 mm² power cables inside the enclosure allows connection of up to 10+ units.

Available options

- Service switch
- Connector for control panel
- M12 connectors for external sensors
- Han 10E motor connector
- Brake chopper and resistor
- 24 V external back up of control and communication
- External electromechanical brake control and supply

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	3 x 380/400/415/440/480 V ± 10%
Supply frequency	50/60 Hz
Max. imbalance on supply voltage	± 2.0% of rated supply voltage
Switching on input supply	2 times/min.
Power Factor (cos φ)	0.9 / 1.0 at rated load
Output data (U, V, W)	
Output voltage	0–100% of supply
Overload torque	160% for 60 sec.
Switching on output	Unlimited
Ramp times	0.02 - 3600 sec.
Output frequency	0.2 - 132 Hz, 1 - 1000 Hz
Digital inputs	
Programmable digital inputs	5
Voltage level	0–24 V DC (PNP positive logic)
Analog inputs	
Analog inputs	2 (1 voltage, 1 current)
Voltage level/Current level	0– ±10 V DC / 0/4–20 mA (scaleables)
Pulse inputs	
Programmable pulse inputs	2 (24 V DC)
Max. frequency	110 kHz (push-pull) / 5 kHz (open collector)
Analog output	
Programmable analog output	1
Current range	0/4–20 mA
Digital output	
Programmable digital/frequency output	1
Voltage/frequency level	24 V DC/10 kHz (max.)
Relay output	
Programmable relay output	1
Max. terminal load	250 V AC, 2 A, 500 VA
Fieldbus communication	
FC Protocol, Modbus RTU, Metasys N2	Built-in
Profibus DP, DeviceNet, AS-interface	Optional (integrated)
Externals	
Vibration test	1.0 g (IEC 60068)
Max. relative humidity	95 % (IEC 60068-2-3)
Ambient temperature	Max. 40°C (24 hour average max. 35°C)
Min. ambient temperature in full operation	0°C
Min. ambient temperature at reduced performance	-10°C
Approvals	CE, UL, C-tick, ATEX*

VLT® DriveMotor FCM 300

IE2

motors for high efficiency

combined with a high-performance, energy saving VLT®.

The VLT® DriveMotor FCM 300 Series is an integrated drive-motor solution which combines a VLT® frequency converter and a high standard quality motor in a single product.

The frequency converter is attached in place of the motor terminal box and it is no higher than the standard terminal box nor wider or longer than the motor.

Incorporated to a high standard quality motor, the VLT® DriveMotor FCM 300 is also available in a multitude of variants, individualised to meet customer requirements.

On the motor

The VLT® electronic motor control together with the motor totally eliminates motor cables and thereby minimises EMC problems. Heat from the drive is dissipated together with the motor heat.

Power range

0.55 – 7.5 kW, 3 x 380 – 480 V

Feature	Benefit
Reliable	Maximum uptime
Robust enclosure	Withstands harsh environments
No power cable length limitation	Increased flexibility
Thermal protection	Total motor-inverter protection
Straightforward EMC compliance	No problem with electromagnetic interferences
User-friendly	Saves commissioning and operating cost
Motor and drive perfectly matched to each other	Saves commissioning time
No panel space required – the DriveMotor is placed on the machine	Saves space
Flexible mounting – foot/flange/face/foot-flange/foot-face	Meets customer requirements
Retrofit without mechanical changes	Easy service
Set-up and controlled through a remote control panel or fieldbus communication and dedicated MCT 10 set-up software	Easy commissioning

Enclosure

IP 55 (standard)
IP 65/IP 66 (optional)

Motor type

2-pole
4-pole

Mounting versions

B03 foot
B05 flange
B35 foot + flange
B14 face
B34 foot + face

Control panel

A Local Control Panel is available for operating, setup and diagnostics. The LCP can be handheld or mounted in a panel front (IP65).

Sleep Mode

In Sleep Mode the motor will stop in a no load situation. When the load returns, the frequency converter will restart the motor.

Motor drain holes

For applications where formation of condensate water might occur.

Sensorless Pump Control – OEM version

Offers precise pressure (head) control without using a pressure transmitter.

Specifications

Mains supply (L1, L2, L3)	
Supply voltage	3 x 380/400/415/440/460/480V ± 10%
Supply frequency	50/60 Hz
Power factor (cos φ)	Max. 0.9/1.0 at rated load
Max. imbalance of supply voltage	± 2% of rated supply voltage
Switching on supply input	Once every 2 minutes
Control Characteristics (frequency converter)	
Frequency range	0 – 132 Hz
Overload torque	160% for 60 sec.
Resolution on output frequency	0.1%
System response time	30 msec. ± 10 msec.
Speed accuracy	± 15 RPM (open loop, CT mode, 4-pole motor 150 – 1500 RPM)

VLT® OneGearDrive®

VLT® OneGearDrive® Standard with brake

VLT® OneGearDrive® Hygienic

Up to 89%

system efficiency

can be achieved with VLT® OneGearDrive® together with VLT® AutomationDrive FC 302 or VLT® Decentral Drive FCD 302. Exceed the IE4 Super Premium Efficiency class today.

VLT® OneGearDrive® is a highly efficient permanent-magnet three-phase synchronous motor coupled to an optimised bevel gear box. As part of the Danfoss VLT® FlexConcept® the VLT® OneGearDrive® is an energy-efficient drive system that helps to optimise plant productivity and reduce energy costs.

With only one motor type and three available gear ratios, the motor concept covers all typical versions of conveyor drives commonly used in the food and beverage industry. Furthermore, the restricted range of physical configurations of the VLT® OneGearDrive® simplifies spares holding and makes it more cost efficient, easing engineering and installation thanks to uniform mechanical dimensions.

Flexible plant design

In combination with the VLT® AutomationDrive FC 302 or the VLT® Decentral Drive FCD 302 the VLT® OneGearDrive® is equally suited to central and decentral installations, giving the plant designer complete flexibility from the outset. As a whole, the system can reach energy savings of up to 40% compared with conventional systems.

Two versions

The VLT® OneGearDrive® comes in two versions, the VLT® OneGearDrive® Standard for use in dry and wet production areas and the VLT® OneGearDrive® Hygienic for use in wet areas, areas with high cleaning intensity and aseptic and clean room production areas.

Feature	Benefit
High system efficiency incl. frequency converter	Save money and energy – up to 40% energy savings compared to conventional systems
High-efficiency Permanent-magnet three-phase synchronous 10-pole motor with bevel gear drive	Better than Super Premium Efficiency class IE4
Available hollow shaft diameters: 30, 35, 40 mm and 3 imperial shaft sizes	Flexible adaption to customer standards
Completely smooth enclosure leaves no crevices or dirt traps	– Easy to clean – Safe production
Motor connection with Danfoss CleanConnect® stainless steel circular connector	– Safe connection in wet areas – Fast installation and replacement – High cleanability
Motor and brake connections via terminal box with CageClamp® technology	– Fast, reliable connection – Lower installation cost
Aseptic coating	– Resistant to detergents and disinfectants (pH 2..12)
Gearbox without breather vents and use of food grade lubricants compliant with FDA and NSF requirements	Up to 35,000 operating hours in partial load between oil change
High degrees of protection: – IP 67 and IP 69K (OGD- H) – IP 65 and IP 67 (OGD- S)	– Unrestricted use in wash down areas – High protection in wash down areas
Fan-free operation	– Less noise emission – No air-borne germs and dirt particles to be drawn into the motor and then expelled back into the surrounding air
Only 3 gearbox ratios in one common design	Up to 70% reduction in variants reduces spare part stock
Compatible with all Danfoss frequency converters FC/D 302 from 1.5-3 kW	Free choice of central and decentral installations

In both versions, completely smooth, easy to clean surface without cooling fins, prevents pockets of dirt from forming and allows detergents to drain off freely. The fan-free motor avoids the risk of air-borne germs and dirt particles being drawn in and then expelled back into the surrounding air.

Hygienic design

The VLT® OneGearDrive® Hygienic complies with the requirements for best cleaning and hygienic design – with certification according to EHEDG (European Hygienic Engineering & Design Group). It is certified as usable for clean rooms and aseptic filling by IPA (Fraunhofer institute) according to the dedicated “Air Cleanliness Classification” DIN EN ISO 14644-1.

Specifications

- Power rating 1.5 – 3.0 kW
- Speed max 3000 rpm
- Frequency max..... 250 Hz
- Current max..... 7.2 A
- Torque..... 1.7 Nm/A
- Voltage 120 V/1000 rpm
- Weight Approx. 28 kg
- CSA/UL On request

Speed/ torque characteristics for gear ratios $i = 31.13$; $i = 14.13$ and $i = 8.12$ (max 3.0 kW)

Dimensions of Danfoss VLT® OneGearDrive® Hygienic in mm

VLT® Integrated Servo Drive System ISD 410

The integration of servomotor and electronic drive unit in the same housing makes this drive system predestined for applications requiring high flexibility and dynamics, such as those in the food & beverage and packaging industries. The decentralisation of the drive unit offers benefits in mounting, installation and operation. Depending on the application, up to 60 drives can be integrated into the servo drive system.

Servo Drive

The motion control is integrated into the drive so that the motion sequences can take place independently. This releases the higher-ranking controller and offers a highly flexible drive concept. The master can be programmed via IEC 61131-3 and hybrid cables are used to connect the drives, making installation fast and simple.

Feature	Benefit
Compact and decentral servo drive	Reduced costs and high flexibility
Dynamic servo performance	Fast, accurate and energy-efficient
System setup performance	Simple and fast configuration of several drives
DC supply to drives from a central power supply module	Fast installation, reduced number of cables
Control via IEC 61131-3	Open system
Hybrid cable	Easy and fast installation, reduced number of cables
All components support CAN	Enhanced diagnostics, reduced downtime

Power Supply Module

The system is powered with DC 300 V via the power supply module. LEDs on the front of the unit enable easy monitoring of operating status. The maximum current output is 10 A and nominal power is 3 kW.

Connection Box

The connection box creates the link between the servomotors and the power supply. Two independent groups of up to 30 motors can be connected. The hybrid cable contains the DC supply, CAN and safety.

Encoder Box

The encoder box enables a master encoder to be connected, this to be read with high precision, and time information to be sent to the drives via CAN. If no encoders are connected, the encoder box functions as a virtual axis for the ISD 410 servo drive system.

Available Options

- Safe Torque Off (STO)
- Brake
- Feedback:
 - Resolver
 - Singleturn
 - Multiturn
- Flexible hybrid loop cable
- IEC flange
- Customised flange on request

Available Accessories

- Shaft seal
- Shaft seal change kit
- Connector kits for:
 - Power Supply Module
 - Connection Box
 - Encoder Box
- Terminating resistor

Specifications

Servomotor	
Rated voltage	DC 300 V
Rated torque	1.7-2.1 Nm
Max. torque	8-11 Nm
Rated current	0.6-1.15 A
Max. current	3.95-7.05 A
Rated speed	600-1000 rpm

VLT® Soft Starter MCD 500

VLT® Soft Starter MCD 500 is a total motor starting solution. Current transformers measure motor current and provide feedback for controlled motor ramp profiles.

AAC, Adaptive Acceleration Control, automatically employs the best starting and stopping profile for the application.

Adaptive Acceleration Control means, that for each start and stop, the soft starter compares and adapts the process to the chosen profile fitting to the application.

VLT® Soft Starter MCD 500 has a four line graphical display and a logic keypad making programming easy. Advanced setup is possible displaying operational status.

Three menu systems: Quick Menu, Application Setup and Main Menu provide optimum programming approach.

Power range

21 – 1600 A, 7.5 – 850 kW
(1.2 MW inside Delta Connection)
Versions for 200 – 690 VAC

Feature	Benefit
AAC Adaptive Acceleration Control	Automatically adapts to the chosen starting and stopping profile
Adjustable bus bars allow for both top and bottom entry (360–1600 A, 160–850 kW)	Space saving, less cable cost and easy retrofitting
DC injection braking distributed evenly over three phases	Less installation cost and less stress on the motor
Inside Delta (6-wire connection)	Smaller soft starter can be selected for the application
Log menus, 99 events and trip log provide information on events, trips and performance	Eases analysis of the application
Auto Reset	Less down-time
Jog (slow-speed operation)	Application flexibility
Second-order thermal model	Allows motors to be used to their full potential without damage from overloading
Internal bypass contactors (21–215 A, 7.5–110kW)	<ul style="list-style-type: none"> – Saves space and wiring compared to external bypass – Very little heat dissipates when running. Eliminates costly external fans, wiring or bypass contactors
Auto-start/stop clock	Application flexibility
Compact size – amongst the smallest in their class	Saves space in cabinets and other application setups
4-line graphical display	Optimum programming approach and setup for viewing operational status
Multiple programming setup (Standard Menu, Extended Menu, Quick Set)	Simplifies the programming, but still holding to maximum flexibility
Multiple languages	Serving the whole world

Three Adaptive Acceleration Control (AAC) start profiles; early, constant and late acceleration

Constant current/ current ramp – here shown with kickstart

Fully featured Soft Starter for motors up to 850 kW

- Total motor starting solution
- Advanced start, stop and protection features
- Adaptive Acceleration Control
- Inside Delta connection
- 4-line graphical display
- Multiple programming setup menus

Optional

- Modules for serial communication:
 - DeviceNet
 - PROFIBUS
 - Modbus RTU
 - USB
- Remote operator kit
- PC software:
 - WinMaster
 - VLT® Motion Control Tool MCT10

VLT® Control Panel LCP 501

- A full function HMI interface
 - everything you can do on the VLT® Soft Starter MCD 500 is possible via the LCP 501
- Danfoss “FC” menu structure and button interface concept
- Multiple language selection
 - incl. Russian and Chinese
- Full graphics
- Real language in 4 lines
- Full parameter list, Quick Menu and application setup
- Adjustable multiple monitoring views
- A “copy-paste” function allows the user to copy parameter settings in the LCP and load to other unit.
- IP 65, NEMA3R
- 3 m cable and mounting kit included

Specifications

VLT® Compact Starter MCD 200

The VLT® Compact Starter MCD 200 from Danfoss includes two families of soft starters in the power range from 7.5 to 110 kW.

The series offer easy DIN rail mounting for sizes up to 30 kW, 2-wire or 3-wire start/stop control and excellent starting duty ($4 \times I_e$ for 6 seconds).

Heavy starting ratings at $4 \times I_e$ for 20 seconds.

Compatible with grounded delta power systems.

Power range
7.5 – 110 kW

Feature	Benefit
Small footprint and compact size	Saves panel space
Built-in bypass	<ul style="list-style-type: none"> Minimises installation cost and eliminates power loss Reduces heat build up. Savings in components, cooling, wiring and labor
Advanced accessories	Allows enhanced functionality
Advanced SCR Control Algorithms balances output waveform	Allowing more starts per hour, accepting higher load
User friendly	Save commissioning and operating cost
Easy to install and use	Saves time
Easy DIN rail mounting for sizes up to 30 kW	Saves time and space
Reliable	Maximum uptime
Essential motor protections (MCD 202)	Reduces overall project investment
Max. ambient temperature 50° C without derating	No external cooling or oversizing necessary

MCD 201

MCD 202

MCD 202 provides enhanced soft start functionality and various motor protection features

Soft Starter for motors up to 110 kW

- Total motor starting solution
- Start, stop and protection features
- Local programming keypad and display

Optional

- Modules for serial communication:
 - DeviceNet
 - Profibus
 - Modbus RTU
 - USB
- Remote operator kit
- PC software
- Pump application module

Remote operation kit

Remote Operator and display with 4–20 mA analogue output proportional to motor current (MCD 202)
 Serial communication: Modbus RTU, AS-i, Profibus and DeviceNet.
 PC-based MCD set-up software.

Specifications

Mains supply (I1, L2, L3)	
Supply voltage	3 x 200 VAC – 440 VAC or 3 x 200 – 575 VAC
Supply frequency	45 – 66 Hz
Control voltage	100 – 240 VAC 380 – 440 VAC 24 VDC/24 VAC

VLT® Soft Start Controller MCD 100

VLT® Soft Start Controller MCD 100 is a cost effective and extremely compact soft starter for AC motors.

A true “fit and forget” soft starter for DIN rail mount, VLT® Soft Start Controller MCD 100 provides basic soft start and stop function.

- A robust semiconductor design
 - selection can be based on motor power which ensures easy selection.
- Can be used for an almost unlimited number of starts per hour without derating.
- A universal control voltage (24-480 V AC/V DC) – simplifies selection and keeps stock at a minimum.
- A “fit and forget” contactor design
 - simplifies installation and reduces required panel space.
- Digitally controlled rotary switches
 - secures precise settings and simplifies installation.
- Ratings for heavy duty as standard
 - simplifies installation and reduces the risk of breakdown

Feature	Benefit
Small footprint and compact size	Saves panel space
Selection can be based on motor power	Easy selection
Universal control voltage	<ul style="list-style-type: none"> – Simplifies selection – Keeps stock at a minimum
“Fit and forget” contactor design	<ul style="list-style-type: none"> – Simplifies installation – Reduces required panel space
User friendly	Save commissioning and operating cost
Easy to install and use	Saves time
Digitally controlled rotary switches	Secures precise settings and simplifies installation
Easy DIN rail mounting for sizes up to 30 kW	Saves time and space
Reliable	Maximum uptime
Robust semiconductor design	Reliable operation
Almost unlimited number of starts per hour without derating	Prevents unauthorized changes
Max. ambient temperature 50° C without derating	No external cooling or oversizing necessary

Timed voltage ramp

- Micro Soft Start Controller for motors up to 11 kW
- Extremely robust SCR design with heavy ratings as standard
- Unlimited number of starts per hour
- Contactor style design for easy selection, installation and commissioning

Power range

MCD 100-001	1,5 kW
MCD 100-007	7.5 kW
MCD 100-011	11 kW

All sizes are rated for line voltage up to 600 V AC.

Specifications

Mains supply (L1, L2, L3)	
MCD 100	3 x 208 VAC ~ 600 VAC (+10% / -15%)
Supply frequency (at start)	45 Hz – 66 Hz
Control circuit (A1, A2)	
MCD 100	24 – 480 VAC/VDC (-15% +10%)
Environmental	
Degree of protection MCD 100	IP 20
Operating temperatures	-5° C/+40° C (60° C with de-rating)
Pollution Degree	Pollution Degree 3
EMC Emission	
Equipment class (EMC)	Class A
Conducted radio frequency emission	
0.15 MHz – 0.5 MHz	< 90 dB (μV)
0.5 MHz – 5 MHz	< 76 dB (μV)
5 MHz – 30 MHz	80-60 dB (μV)
Radiated radio frequency emission	
30 MHz – 230 MHz	< 30 dB (μV/m)
230 MHz – 1000 MHz	< 37 dB (μV/m)
<i>This product has been designed for Class A equipment. Use of the product in domestic environments may cause radio interference, in which case the user may be required to employ additional mitigation methods.</i>	
EMC Immunity	
Electro static discharge	4 kV contact discharge, 8 kV air discharge
Radio-frequency electromagnetic field	
0.15 MHz – 1000 MHz	140 dB (μV)
Rated impulse withstand voltage (Fast transients 5/50 ns – Burst)	4 kV line to earth
Rated insulation voltage (Surges 1.2/50 μs – 8/20 μs)	4 kV line to earth, 2 kV line to line
Voltage dip and short time interruption	100 ms (at 40% nominal voltage)
Short Circuit	
Rated short-circuit current MCD 100-001	Normal fuses: 25 A gL/gG
SCR I2t rating for semiconductor fuses	72 A2s
Rated short-circuit current MCD 100-007	Normal fuses: 50 A gL/gG
SCR I2t rating for semiconductor fuses	1800 A2s
Rated short-circuit current MCD 100-011	Normal fuses: 80 A gL/gG
SCR I2t rating for semiconductor fuses	6300 A2s
Heat Dissipation	
MCD 100-001	Max. 4 watts
MCD 100-007 to MCD 100-011	2 watts/Ampere
Standards Approvals	
UL/C-UL	UL508
CE	IEC 60947-4-2

Dimensions

VLT® Low Harmonic Drive

Optimised

for:

- VLT® HVAC Drive FC 102
- VLT® AQUA Drive FC 202
- VLT® AutomationDrive FC 302

The Danfoss VLT® Low Harmonic Drive is the first solution combining an active filter and a drive in one package.

The VLT® Low harmonic drive continuously regulates harmonic suppression according to the load and grid conditions without affecting the connected motor.

The total harmonic current distortion is reduced to less than 3% on grids with balanced mains, a minimum pre-distortion to less than 5% on grids with high harmonic distortion and 2% phase unbalance. As individual harmonics also fulfil toughest harmonic requirements, the VLT® Low harmonic drive meets all present harmonic standards and recommendations.

Unique features such as sleep mode and back channel cooling offers unmatched energy efficiency for Low Harmonic Drives.

The VLT® Low harmonic drive requires the same set-up and installation as a standard VLT® drive and out of the box it ensures optimum harmonic performance.

The VLT® Low harmonic drive has the same modular build-up as our standard high power drives and shares similar features: Built-in RFI filters, coated PCB and user-friendly programming.

Feature	Benefit
Reliable	Maximum uptime
No increased winding stress on motor	– Longer motor lifetime – Less initial cost (no output filter needed)
– 100% factory tested – Coated PCBs	Low failure rate
Innovative cooling concept	Prolonged lifetime of electronics
User-friendly	Saves commissioning and operating cost
No extra wiring and set-up needed	Easy commissioning and low initial costs
Modular design	Easy serviceability
Full readout of grid conditions	Reduces needed harmonic testing
Energy saving	Lower operation costs
– High efficiency – Sleep mode and progressive switching freq.	Low running expenses
Independent of grid and load changes	– Increased transformer efficiency – Reduced cable losses

Voltage range

■ 380 – 480 V AC 50 – 60 Hz

Power Range

132 – 630 kW High Overload/
160 – 710 kW Normal Overload
(Matching drive frames D, E and F)

Enclosure degree

■ IP 21/NEMA 1
■ IP 54/NEMA 12

Options

The following options are available:

- RFI filters
- Disconnect
- Fuses
- Mains shielding
- Feedback and I/O options
- Fieldbus options
- dU/dt filters
- Sine wave filters

PC software

VLT® Motion Control Tool MCT 10 offers advanced programming functionality for all Danfoss drive products, greatly reducing programming and set-up time.

MCT 10 Basic (available free of charge from www.danfoss.com) allows access to a finite number of drives with limited functionality.

The advanced edition, offering a higher level of functionality, is available from your Danfoss sales partner.

Calculation Software

With VLT® Motion Control Tool MCT 31, you can determine whether harmonics will be an issue in your installation when drives are added.

MCT 31 estimates the benefits of adding various harmonic mitigation solutions from the Danfoss product portfolio and calculates system harmonic distortion. Furthermore the software provides quick indication of whether the installation complies with the most recognised harmonic norms and recommendations.

From www.danfoss.com you can down-load the free tool MCT 31 – the most up-to-date version of the calculation software.

12-pulse VLT® drive

Robust and cost effective harmonic solution for the higher power range. The Danfoss 12-pulse VLT® drive offers reduced harmonics for demanding industry applications above 250 kW.

The 12-pulse VLT® drive is a high efficiency variable frequency converter which is built with the same modular design as the popular 6-pulse VLT® drives. It is offered with similar drive options and accessories and can be configured according to customer need.

Together with the needed 30°-phase shifting transformer the solution provides durability and reliability at a low cost.

Under ideal grid conditions the solution eliminates the 5th, 7th, 17th and 19th harmonics and results in a THiD of around 12% at full load.

The needed transformer makes this solution ideal for applications where stepping down from medium voltage is required or where isolation from the grid is needed.

The Danfoss 12-pulse VLT® drive provides harmonic reduction without adding capacitive or inductive components which often require network analysis to avoid potential system resonance problems.

Feature	Benefit
Reliable	Maximum uptime
Maintenance free	No running expenses
Durability	Long lifetime
Coated PCBs	Environmental robustness
100% factory tested	Low failure rate
Back-channel cooling	Prolonged lifetime of electronics
Design	Easy operation and user-friendly set-up
Modular design	Easy serviceability
Same easy programming as a 6-pulse drive	User-friendly operation
– Standard award-winning control panel (LCP)	Effective commissioning and operation
– Available in 27 languages

VLT® Advanced Active Filter AAF 006

A flexible and adaptable solution for central or decentral harmonic mitigation.

VLT® Advanced Active Filter AAF 006 can compensate for individual VLT® drives or can be installed as a compact stand-alone solution at a common point of coupling, compensating for several loads simultaneously.

Consequently the filter ensures optimal harmonic suppression independent of the number of loads and their individual load profile. In addition the active filter corrects the power factor and balances the phase load providing an optimal energy utilization.

This improves the system efficiency and increases the grid robustness to avoid downtime.

The extensive re-use of proven VLT® components and the modular construction ensures a high reliability and at the same time offers high energy efficiency, back channel cooling and high enclosure grades without size increase.

The VLT® Advanced Active Filter is easily controlled via the user-friendly LCP, sharing design and programming structure with the VLT® drives series.

Feature	Benefit
Reliable	Maximum uptime
<ul style="list-style-type: none"> – 100% factory tested – Coated PCBs – >90% components re-used from proven VLT® FC series 	Low failure rate
Innovative cooling concept	Prolonged lifetime of electronics
User-friendly and flexible	Saves commissioning and operating cost
Innovative programming possibilities	Low running expenses
Modular design	Easy serviceability
Wide range of options	<ul style="list-style-type: none"> – Low initial investment – High degree of customisation
Energy saving	Lower operation costs
<ul style="list-style-type: none"> – High efficiency – Sleep mode and progressive switching freq. – Power factor correction 	Low running expenses

Without dismantling existing installation, the VLT® Advanced Active Filters are easily retrofitted to the existing installation, where harmonics are increased because of enlarged employment of non-linear loads such as variable speed drives.

Voltage range

380 – 480 V AC 50 – 60 Hz

Current range

190 A, 250 A, 310 A, 400 A.
Up to 4 units can be paralleled for higher power.

Enclosure degree

- IP 21/NEMA Type 1
- IP 54/NEMA Type 12

Options

The following options are available:

- RFI filters
- Disconnect
- Fuses
- Mains shielding

VLT® Advanced Harmonic Filter AHF 005/ 010

Optimised harmonic performance with the FC series up to 250 kW.

The VLT® Advanced Harmonic Filter AHF 005/ 010 have been specially designed to match the Danfoss frequency converters for unmatched performance and design.

Compared to traditional harmonic trap filters they offer a smaller footprint and higher harmonic reduction.

The solution is available in two variants, AHF 005 and AHF 010. When connected in front of a Danfoss VLT® frequency converter, the harmonic current distortion generated back to the mains is reduced to 5% and 10% Total Harmonic Current Distortion at full load.

With a >98% efficiency the passive Advanced Harmonic Filters offer cost effective and very robust harmonic solutions specifically for power up to 250 kW.

As stand-alone options the advanced harmonic filters feature a compact housing that is easily integrated into existing panel space. This makes them well-suited for retrofit applications with limited adjustments of the frequency converter.

Feature	Benefit
Reliable	Maximum uptime
– 100% factory tested	Low failure rate
– Based on proven and tested filter concept	
Energy saving	Lower operation costs
– High efficiency	Low running expenses
– Electrically matched to the individual VLT® FC drives	
Design	Compact and aesthetic enclosure
– Innovative coil design	– Smaller footprint
– Side-by-side mounting	– Less wall space needed
– Optimized for mounting in panels	
Easy commissioning	Low commissioning costs
Enclosure size and colour matches	Danfoss look and feel

electromagnetic interference

VLT® Common Mode Filters MCC 105 core kit reduce electromagnetic interference and eliminate bearing damage by electrical discharge.

VLT® Common Mode Filters MCC 105 (HF-CM) cores are special nanocrystalline magnetic cores which have superior filtering performance compared to regular ferrite cores. They act like a common-mode inductor (between phases and ground).

Installed around the three motor phases (U, V, W), they reduce high-frequency common-mode currents. As a result, high-frequency electromagnetic interference from the motor cable is reduced. However, the core kit should not be used as the sole mitigation measure, and even when the cores are used, the EMC installation rules shall be followed.

Prevent motor bearing currents

The most important function is to reduce high-frequency currents associated with electrical discharges in the motor currents. These discharges contribute to the premature wear-out and failure of motor bearings. By reducing or even eliminating discharges, the wear-out of the bearings is reduced and the lifetime extended. Thus, maintenance and down-time costs are lowered.

Feature	Benefit
High-performance nanocrystalline magnetic material	<ul style="list-style-type: none"> – Effective reduction of electrical discharges in the motor bearings – Reduces bearing wear-out, maintenance costs and down-time – Reduces high-frequency electromagnetic interference from the motor cable
<ul style="list-style-type: none"> – Oval shape – Scalable solution: longer cables handled by stacking more cores 	Easy to install in restricted places such as the VLT® enclosure or the motor terminal box
Only 4 core sizes cover the entire VLT® power range	<ul style="list-style-type: none"> – Easy logistics, fast delivery and comprehensible product program – Allows the addition to a service tool-kit
Low investment	Cost-effective alternative to, for example, sine-wave filters if the only phenomena to be mitigated is bearing wear-out through electrical discharge

Ideal for retrofitting

Bearing current problems are most often discovered after commissioning. Therefore, the cores have an oval shape which makes them ideal for retrofitting and for installation in restricted places.

Only 4 variants cover the entire VLT® product range making it possible to carry these valuable aids in a service tool kit.

A flexible solution

The cores can be combined with other output filters, and especially in combination with dU/dt filters they offer a low cost solution for protection of both motor bearings and insulation.

Product range

- Available for all power sizes from 0.18 kW to 1.4 MW
- 4 core sizes cover the entire VLT® power range

HF-CM selector

The cores can be installed at the frequency converter's output terminals (U, V, W) or in the motor terminal box. When installed at the frequency converter's terminals, the HF-CM kit reduces bearing stress and high-frequency electromagnetic interference from the motor cable. The number of cores depends on motor cable length and frequency converter voltage. A selection table is shown to the right.

Cable length [m]	A and B frame		C frame		D frame		E and F frame	
	T5	T7	T5	T7	T5	T7	T5	T7
50	2	4	2	2	2	4	2	2
100	4	4	2	4	4	4	2	4
150	4	6	4	4	4	4	4	4
300*	4	6	4	4	4	6	4	4

* Longer cable lengths are easily handled by stacking more HF-CM cores.

Ordering numbers and dimensions

Ordering numbers for the core kits (2 cores per package) are given in the table below.

VLT® Frame Size	Danfoss ordering number	Core dimension [mm]					Weight [kg]	Packaging dimension [mm]
		W	w	H	h	d		
A and B	130B3257	60	43	40	25	22.3	0.25	190 x 100 x 70
C	130B3258	102	69	61	28	37	1.6	190 x 100 x 70
D	130B3259	189	143	126	80	37	2.45	235 x 190 x 140
E and F	130B3260	305	249	147	95	37	4.55	290 x 260 x 110

Installation

VLT® Sine-Wave Filter MCC 101

VLT® Sine-wave Filter MCC 101 output filters are low-pass filters that suppress the switching frequency component from the drive and smooth out the phase-to-phase output voltage of the drive to become sinusoidal. This reduces the motor insulation stress and bearing currents.

VLT® Sine-wave Filter MCC 101 output filters are differential-mode low-pass filters that suppress the switching frequency component from the drive and smooth out the phase-to-phase output voltage of the drive to become sinusoidal. This reduces the motor insulation stress and bearing currents.

By supplying the motor with a sinusoidal voltage waveform, the switching acoustic noise from the motor is also eliminated.

Thermal losses and bearing currents

The sinusoidal voltage supply to the motor reduces hysteresis thermal losses in the motor. Since the motor insulation lifetime is dependent on the motor temperature, the sine-wave filter prolongs the lifetime of the motor.

The sinusoidal motor terminal voltage from the sine-wave filter furthermore has the advantage of suppressing any bearing currents in the motor. This reduces the risk of flashover in the motor bearings and thereby also contributes to extended motor lifetime and increased service intervals.

Feature	Benefit
Supplies the motor with a sinusoidal voltage waveform	– Prevents flashover in motor windings
Eliminates over-voltages and voltage spikes caused by cable reflections	– Protects the motor insulation against premature aging
Reduces electromagnetic interference by eliminating pulse reflection caused by current ringing in the motor cable. This allows the use of unshielded motor cables in some applications.	– Trouble-free operation
Eliminates acoustic noise in motor	– Noiseless motor operation
Reduces high frequent losses in motor	– Prolongs service interval of motor

Quality and Design

All filters are designed and tested for operation with the VLT® Automation-Drive FC 302, VLT® AQUA Drive FC 202, and the VLT® HVAC Drive FC 102. They are rated for the nominal switching frequency of the VLT® FC series and therefore no derating of the drive is needed.

The enclosure is designed to match the look and quality of the VLT® FC series drives.

Advantages

- Compatible with all control principles including flux and VVC+
- Parallel filter installation is possible for applications in the high power range

Range

- 3 x 200 – 500 V, 2.5 – 800 A
- 3 x 525 – 690 V, 13 – 660 A

Enclosures

- IP 00 and IP 20 wall-mounted enclosure up to 75 A (500 V)/13 A (690 V)
- IP 23 floor-standing enclosure from 115 A (500 V)/28 A (690 V)

Mounting

- Side by side mount with the drive up to 75 A (500 V)

Voltage and current without filter

Voltage and current with filter

Specifications

Voltage rating	3 x 200 – 500 V and 3 x 525 – 690 V
Nominal current I_N @ 50 Hz	2.5 – 800A for higher power modules can be paralleled
Motor frequency	0 – 60 Hz without derating 100/120 Hz (up to 10 A) with derating
Ambient temperature	-25° to 45°C without derating
Min. switching frequency	f_{min} 1,5 kHz – 5 kHz depending on filter type
Max. switching frequency	f_{max} 8 kHz
Overload capacity	160% for 60 sec every 10 min.
Enclosure degree	IP 00/IP 20/IP 23 (ref. page 1)
Approvals	CE, UL508

Relative sound pressure measurements from the motor with and without sine-wave filter

No filter

With sine-wave filter

Performance Criteria	du/dt filters	Sine-wave filters
Motor insulation stress	Up to 100 m cable (shielded/unshielded) complies with the requirements of IEC60034-17* (general purpose motors). Above this cable length the risk of "double pulsing" increases.	Provides a sinusoidal phase-to-phase motor terminal voltage. Complies with IEC-60034-17* and NEMA-MG1 requirements for general purpose motors with cables up to 500 m (1 km for frame size D and above).
Motor bearing stress	Slightly reduced, mainly in high power motors.	Reduces bearing currents caused by circulating currents. Does not reduce common-mode currents (shaft currents).
EMC performance	Eliminates motor cable ringing. Does not change the emission class. Does not allow longer motor cables as specified for the frequency converter's built-in RFI filter.	Eliminates motor cable ringing. Does not change the emission class. Does not allow longer motor cables as specified for the frequency converter's built-in RFI filter.
Max. motor cable length	100 m ... 150 m With guaranteed EMC performance: 150 m screened Without guaranteed EMC performance: 150 m unscreened	With guaranteed EMC performance: 150 m shielded and 300 m unshielded (only conducted emissions). Without guaranteed EMC performance: up to 500 m (1 km for frame size D and above).
Acoustic motor switching noise	Does not eliminate acoustic switching noise from the motor.	Eliminates acoustic switching noise from the motor caused by magnetostriction.
Relative size	15 – 50% (depending on power size).	100%
Relative price	50%	100%

*Not 690 V

VLT® dU/dt Filter MCC 102

VLT® dU/dt Filter MCC 102 reduce the dU/dt values on the motor terminal phase-to-phase voltage – an issue that is important for short motor cables.

VLT® dU/dt Filter MCC 102 are differential-mode low-pass filters which reduce motor terminal phase-to-phase peak voltages spikes and reduce the rise time to a level that lowers the stress on the insulation of motor windings.

Compared to sine-wave filters, the dU/dt filters have a cut-off frequency above the switching frequency. The voltage at the motor terminals is still PWM pulse shaped, but the rise time and U_{peak} are reduced. They are smaller, weigh less and have a lower price compared to sine-wave filters. Furthermore, because of the smaller inductance and capacitance, the dU/dt filters introduce a negligible reactance between inverter and motor and are therefore suitable for high dynamic applications.

Superior compared to output chokes

Output chokes cause undamped oscillations at the motor terminals which increase the risk of double pulsing and over-voltages higher than twice the DC link voltage. The dU/dt filters are low-pass L-C filters with a well defined cut-off

Feature

Reduces dU/dt stresses
Lowers the magnetic interference propagation on surrounding cables and equipment
Low voltage drop makes dU/dt filters the ideal solution for highly dynamic applications with flux vector regulation

Benefit

Increases motor service interval
Trouble-free operation
Small size and cost compared to sine-wave filters

frequency. Therefore the ringing oscillations at the motor terminals are damped and there is a reduced risk of double pulsing and voltage peaks.

Quality and Design

All dU/dt filters are designed and tested for operation with the VLT® AutomationDrive FC 302, VLT® AQUA Drive FC 202, and the VLT® HVAC Drive FC 102. They are designed to match the look and quality of the FC series.

Advantages

- Compatible with all control principles, including flux and WC+
- Parallel filter installation is possible for applications in the high power range

Range

3 x 200 – 690 V (up to 880 A)

Enclosures

- IP 00 and IP 20/23 enclosure in the entire power range.
- IP 54 enclosure available up to 180 A.

Mounting

- Side by side mounting with the drive
- Filters wall mounted up to 480 A (380 V) and floor mounted above that size

Voltage and current without filter

Voltage and current with filter

Specifications

Voltage rating	3 x 200 – 690 V
Nominal current I_N @ 50 Hz	44 – 880 A @ 200 – 380 V, 40 – 780 A @ 460 V 32 – 630 A @ 600 V and 27 – 630 A @ 690 V for higher power modules can be paralleled
Motor frequency	0 – 60 Hz without derating Max. 100 Hz (with derating)
Ambient temperature	-25° to 45° C without derating
Max. switching frequency	f_{sw} 1,5 kHz – 4 kHz depending on filter type
Mounting	Side-by-side
Overload capacity	160% for 60 sec every 10 min.
Enclosure degree	IP 00, IP 20/23 and IP 54
Approvals	CE, UL508

dU/dt limit curves

The dU/dt value decreases with the motor cable length whereas the peak voltage increases. Therefore it is recommended to use sine-wave filters in installations with motor cable lengths above 150 m.

Performance Criteria	du/dt filters	Sine-wave filters
Motor insulation stress	Up to 100 m cable (shielded/unshielded) complies with the requirements of IEC60034-17* (general purpose motors). Above this cable length the risk of "double pulsing" increases.	Provides a sinusoidal phase-to-phase motor terminal voltage. Complies with IEC-60034-17* and NEMA-MG1 requirements for general purpose motors with cables up to 500 m (1 km for frame size D and above).
Motor bearing stress	Slightly reduced, mainly in high power motors.	Reduces bearing currents caused by circulating currents. Does not reduce common-mode currents (shaft currents).

VLT® Motion Control Tool MCT 10

Optimised

for:

- Commissioning
- Servicing
- Programming

The VLT® Motion Control Tool MCT 10, is ideal for commissioning and servicing the drive including guided programming of cascade controller, real-time clock, smart logic controller and preventive maintenance.

The setup software provides easy control of details as well as a general overview of systems, large or small. The tool handles all drive series, VLT® Advanced Active Filters and VLT® Soft Starter related data.

More efficient service organization

- Scope & logging: analyse problems easily
- Read out alarms, warnings and fault log in one view.
- Compare saved project with on-line drive
- Update drive or option firmware. One tool handling all
(to be supported in January)

More efficient commissioning

- Off-line commissioning off site
- Save/send/mail projects anywhere
- Easy field-bus handling, multiple drives in project file. Enables service organization to be more efficient

Feature	Benefit
One PC tool for all tasks	Save time
"Explorer-like" view	Easy to use
Option programming	Save time
Online and offline commissioning	Flexible and save cost
Scope & logging	Easy and fast analyzing – less downtime
Alarm history	Easy fault finding
Multiple interfaces	Easy connection
USB connection	Easy connection
Flexible Ethernet connection	Easy connection – save time (utilizing all Danfoss Ethernet based fieldbus options)

Basic version

- Off –line commissioning (max. 4 drives)
- Scope & Graph (max. 2 channels)
- Multiple fieldbus support
- Alarm history in saved projects
- MCO 305 support
- Graphical Smart Logic Controller
- Graphical Clock functions, Time-based Actions, Preventive Maintenance and Basic Cascade Controller (FC 102/FC 202 only)
- Update drive support to support new firmware (future compatible)
- FC drive conversion (FC 102/FC 202 & FC 300 series)

Advanced version

- Basic version functionality +
- No limitation in number of drives
- Scope & Graph (max. 8 channels)
- Real Time Logging from drive
- Motor Database
- Graphical Sensorless pump control
- Graphical Extended Cascade Controller (FC-202 only)
- Full Customer Specific Initialization File support
(to be supported in January)
- Full drive password protection support (To be supported in January)

Fieldbusses

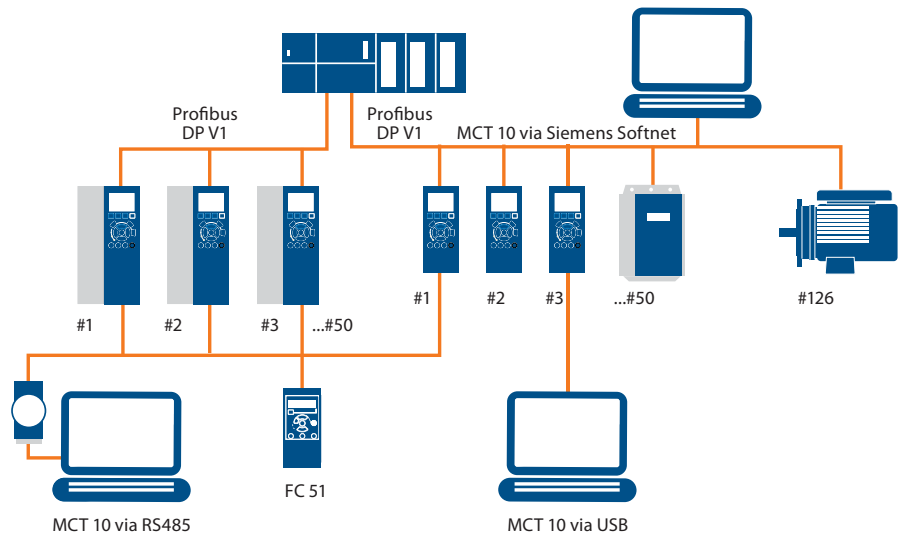

- PROFIBUS DP-V1
- RS485
- USB
- EtherNet-TSC

Internet download

<http://www.danfoss.com/drives>

System requirements

- MS Windows® NT 4.0, 2000, XP, Vista or 7
- Pentium III 350 MHz or better
- 512 MB RAM or better
- 200 MB free hard disk space
- CD-ROM drive
- VGA or XGA graphic adapter

VLT® Motion Control Tool MCT 31

Optimised

for:

- Application specific simulations
- Various Power Supply sources
- Norm compliance indication
- Project Documentation

With VLT® Motion Control Tool MCT 31, you can determine whether harmonics will be an issue in your installation when drives are added. MCT 31 estimates the benefits of adding various harmonic mitigation solutions from the Danfoss product portfolio and calculates system harmonic distortion.

Save money and reduce running costs

On the basis that it is better to avoid a problem rather than cure one after it happens, it is preferable to calculate the effect of installing non-linear loads before doing so, to estimate the degree of harmonic distortion that may result.

Trying to achieve this on a spreadsheet basis can be time consuming and inaccurate.

To help, Danfoss offers free to download, the VLT® Motion Control Tool MCT 31, a simple to use and fast software tool for calculating the harmonic disruption from your existing or intended drives installation.

A fast estimate is vital as, in this case, more is not better, simply more costly, so the MCT 31 can help save money when selecting harmonic mitigation solutions.

Simply over-specifying a harmonic mitigation solution will lead to unnecessary initial cost escalation and increased running expenses.

Feature	Benefit
Explore-like view	Easy to use
Simple simulation model with less parameters	Easy to use and fast simulation – save time
Configurable for various Power supply sources	Matching all customer needs
One tool supporting all Danfoss harmonic mitigation solutions	Matching all customer needs
Configurable Norm compliance indication	Save time
User configurable Report gation solutions	Project documentation
Simulate the setup before installation	Save time and money. Prevent problems appear later

Calculate the harmonic disturbance

The MCT 31 tool can easily be used to evaluate the expected grid quality and includes a range of passive and active counter-measures which can be selected to ease system stress.

The power quality impact of electronic devices can be estimated in the frequency range up to 2.5 kHz, depending on the system configuration and standard limits.

The analysis includes indication of compliance with various standards and recommendations.

The Windows-like interface of the MCT 31 tool makes possible intuitive

operation of the software. It is built with a focus on user-friendliness and the complexity is limited to system parameters that are normally accessible.

The Danfoss VLT® frequency converter and mitigation equipment data is already pre-loaded, allowing fast data entry.

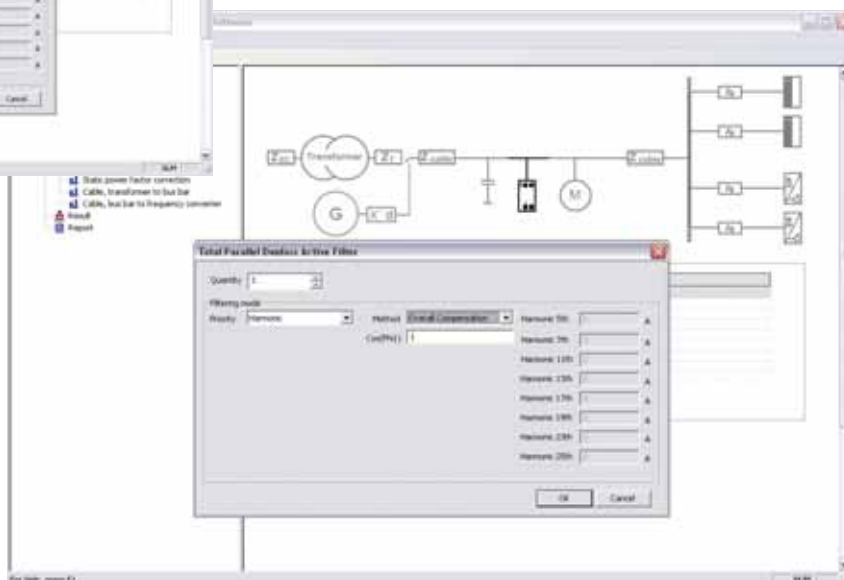

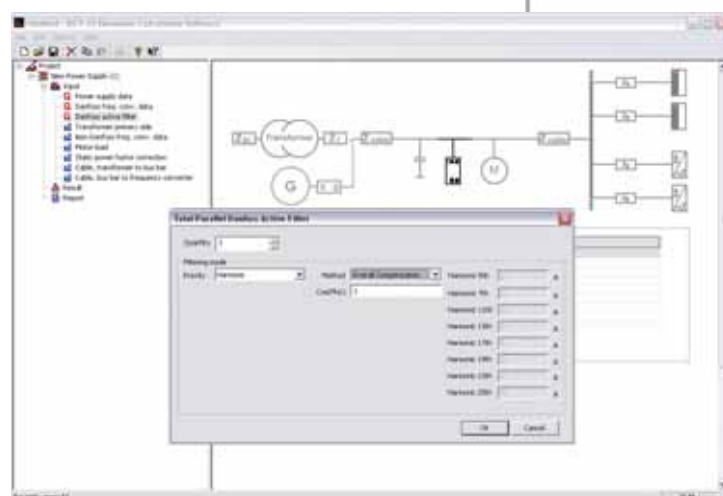

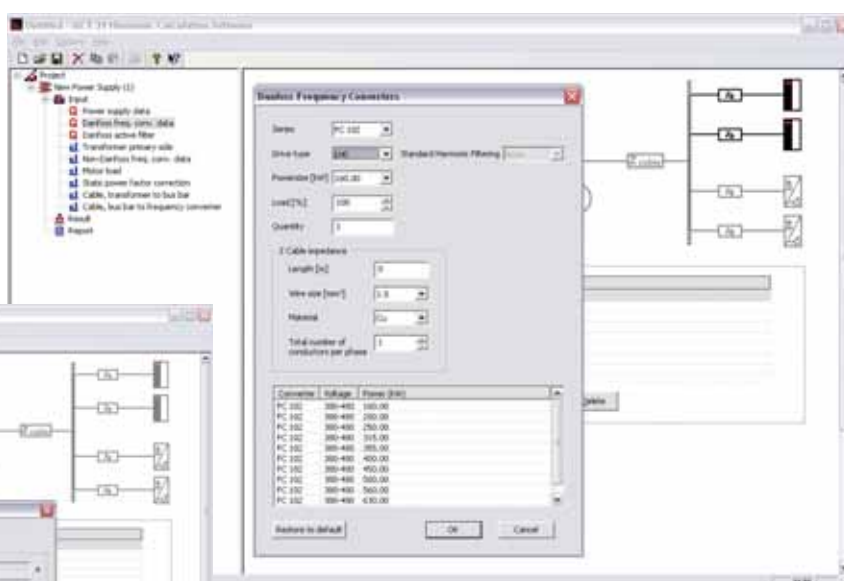

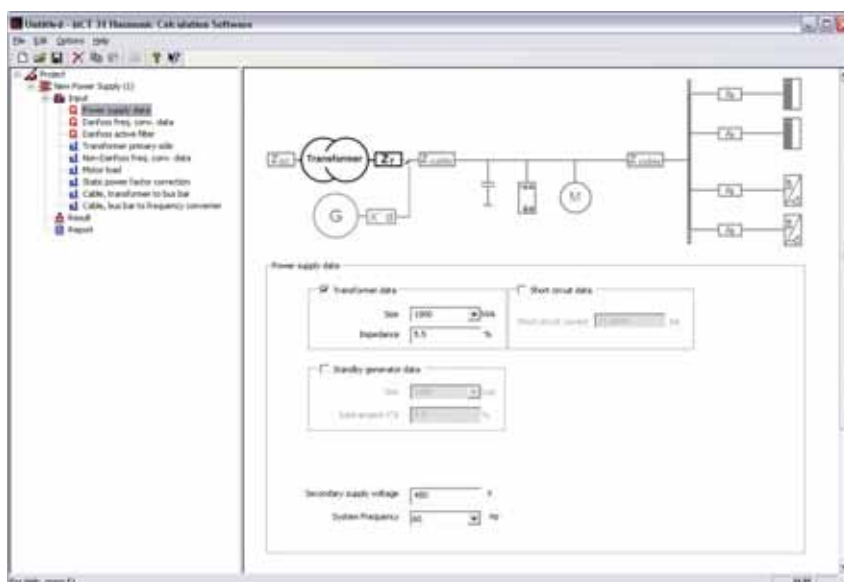

Your local Danfoss consultant will be very happy to provide all the assistance you need to evaluate your power quality and advice in the selection of the correct mitigation for your circumstances.

Internet download

System requirements

- MS Windows NT 4.0, 2000, XP, Vista or 7
- Pentium III 350 MHz or better
- 512 MB RAM or better
- 200 MB free hard disk space
- CD-ROM drive
- VGA or XGA graphic adapter

VLT® Energy Box

Optimised

for:

- Designing HVAC installations
- Obtaining energy savings
- Calculating pay-back time

With VLT® Energy Box software you can both theoretically in project face estimate and afterwards physically validate your real energy savings and reductions in your carbon footprint – from your desk.

VLT® Energy Box makes energy consumption calculations of fan, pump and cooling tower applications driven by VLT® HVAC Drives from Danfoss and compares it with alternative methods of flow control.

The program compares the total operation costs of various traditional systems compared to operation of the same system with a VLT® HVAC Drive.

With VLT® Energy Box software you can both theoretically in project face estimate and afterwards physically validate your real energy savings and reductions in your carbon footprint – also from your desk.

The VLT® Energy Box communicates with the drives through the USB/RS485 protocol and can read all data about duty cycles and energy consumptions.

Data about duty cycles and energy consumptions can be requested remotely from the VLT® HVAC Drive, making it easy to monitor your energy savings and return on investment. Monitoring via fieldbus often makes energy meters ommissible.

Feature

- Estimate savings
- Calculates pay back based on investments and annual costs
- Generates a report
- Special cooling tower mode based on climate data
- Possible to adjust climate region to local conditions
- Download of energy data from the drive via serial communication and USB
- Covers several projects and systems in same file

Benefit

- Make purchase decision easy
- Economical overview
- Easy communication
- Easy calculation
- More accurate calculations
- Facilitates the drives payback function
- Visualize actual load profile
- Generation of common project report

The software allows you to upload real trend and energy data, to present multiple systems in one report and to calculate energy consumption for cooling towers.

Complete financial analysis

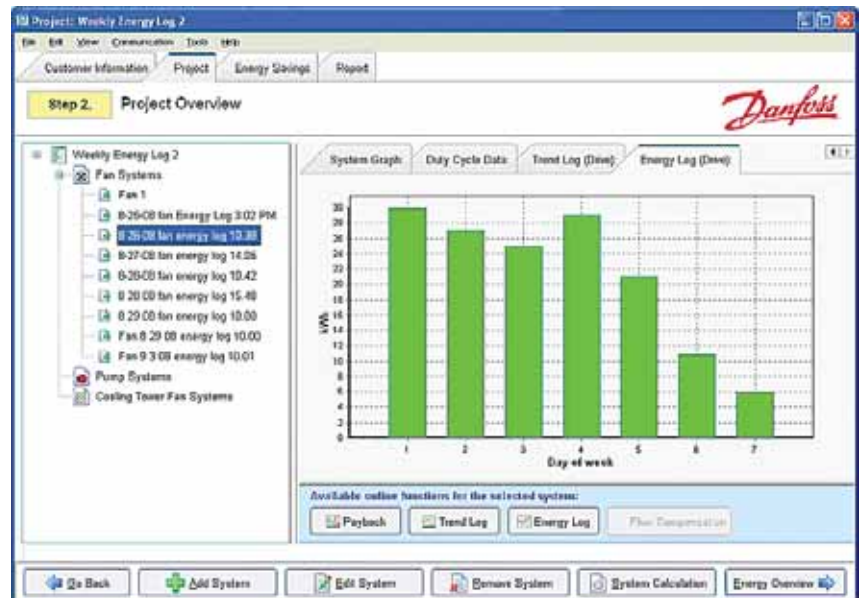

VLT® Energy Box provides a complete financial analysis including:

- Initial cost for the drive system and the alternative system
- Installation and hardware costs
- Annual maintenance costs and any utility company incentives for installation of energy conservation products
- Payback time and accumulated savings are calculated

No nonsense

Since VLT® Energy Box both estimates and afterwards measures the real energy savings, it is a very trustworthy means for calculating projects involving many fans, pumps and cooling towers. You can simply install a single VLT® HVAC Drive and check the actual savings to exactly calculate the benefits from installing VLT® HVAC Drives on the other applications.

Considers local conditions

VLT® Energy Box use local weather data in its calculations for cooling towers.

Data from weather zones around the Globe are pre-installed, but the user is free to adjust these data according to local conditions.

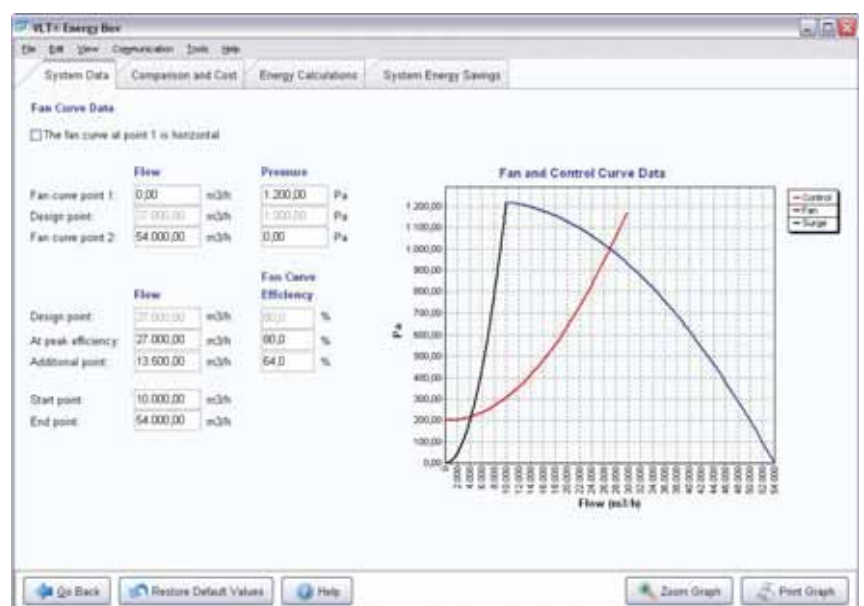

Specify the curve

Energy Box offers an advanced mode to specify the fan or pump curve in more detail.

The fan or pump (equipment) curve can be adjusted to match almost any shape.

Choose flow and pressure points to generate an equipment curve similar to the published fan or pump curve over the relevant section of the curve using the mechanical flow control method.

The program will not allow calculations in regions that are in a surge region or beyond the end of the curve.

VLT® Service

VLT® DrivePro™

LifeCycle Service Packages

VLT® DrivePro™ Plus

The Plus Package offers a program of support to help customers realize improved drive availability and reliability.

Features

- Preventative Maintenance
- Standard Training
- 24 hour Hotline
- 24 hour response time
- On-site service

VLT® DrivePro™ Premium

Our Premium Program provides a combination of basic and advanced service and support resources aimed at extending the life of your drives and ensure peak economic performance.

Features

- Preventative Maintenance
- Standard and scheduled training
- 24 hour Hotline
- 6 hour response time
- On-site service, inc. labour & travel
- Start-up
- Extended warranty – Depot
- Extended warranty – On-site
- Environmental disposal

VLT® DrivePro™ Supreme

The Supreme Package provides a full scope of service to meet your operational needs, help you achieve business critical KPI metrics and last but not least give you total peace of mind.

Features

- Preventative Maintenance
- Customer-specific training
- 24 hour Hotline
- 6 hour response time
- On-site service, inc. labour & travel
- Start-up
- Extended warranty – Depot
- Extended warranty – On-site
- Environmental disposal
- Analysis and surveys
- Spare Parts/Drives
- SmartStep
- Stock Maintenance & Consignment
- Stock

VLT® DrivePro™

SmartStep

Upgrade and replace equipment proactively for total peace of mind

Upgrade sensibly

DrivePro™ SmartStep is a comprehensive replacement and upgrade program for customers to assure optimal efficiency and cost performance. It's an easy upgrade program for substantially reduced cost that's backed by professional service support.

DrivePro™ SmartStep advantages

- Customized service and upgrade program
- Flexible replacement plan
- Fixed costs

Designed for success

- Minimize down-time costs
- Extend mean-time-to-repair intervals
- Control your maintenance budget
- Avoid unexpected investments in equipment

Available for application areas such as:

- Food & Beverage
- HVAC
- CTM (chemical, textile, materials)
- Water and wastewater

Service you can rely on 24/7 – around the world

Sales and Service

Contacts worldwide. Helping to optimise your productivity, improve your maintenance, and control your finances.

- 24/7 availability
- Local hotlines, local language and local stock

The Danfoss service organisation is present in more than 100 countries – ready to respond whenever and wherever you need, around the clock, 7 days a week.

Find your local expert team on www.danfoss.com/drives

Configure your VLT® drive to fit your needs on <http://driveconfig.danfoss.com>

The Drive Configurator gives you the possibility to configure (select) the right drive for your purpose. You don't have to consider if the combinations are valid, while the configurator only gives you valid selections.

Drive Configurator

The Danfoss Drive Configurator is an advanced but easy-to-use tool to configure the Danfoss VLT® frequency converter that exactly matches your requirements.

The Drive Configurator generates the unique article number for the drive you need, preventing errors during order entry.

"Decoding" is also available: Enter a Typecode and the Drive Configurator will decode the configuration and show configuration for your drive.

"Reverse engineering" is also supported: Enter an article number and the Drive Configurator will display the exact configuration for the drive in question, including all options and special features. A further advantage of using the Drive Configurator is that it tells you exactly which options and features are available and so prevents you selecting conflicting or nonsensical combinations.

If you need to replace an obsolete product, just enter the article number of the older VLT® and the Drive Configurator will provide details of the appropriate newer generation replacement.

Last but by no means least, the Drive Configurator provides quick access to the available spare parts and accessories for both current and obsolete products.

What VLT® is all about

Danfoss VLT Drives is the world leader among dedicated drives providers – and still gaining market share.

Environmentally responsible

VLT® products are manufactured with respect for the safety and well-being of people and the environment.

All frequency converter factories are certified according to ISO 14001 and ISO 9001 standards.

All activities are planned and performed taking into account the individual employee, the work environment and the external environment. Production takes place with a minimum of noise, smoke or other pollution and environmentally safe disposal of the products is pre-prepared.

UN Global Compact

Danfoss has signed the UN Global Compact on social and environmental responsibility and our companies act responsibly towards local societies.

Impact on energy savings

One year's energy savings from our annual production of VLT® drives will save the energy equivalent to the energy production from a major power plant. Better process control at the same time improves product quality and reduces waste and wear on equipment.

Dedicated to drives

Dedication has been a key word since 1968, when Danfoss introduced the world's first mass produced variable speed drive for AC motors – and named it VLT®.

Twenty five hundred employees develop, manufacture, sell and service drives and soft starters in more than one hundred countries, focused only on drives and soft starters.

Intelligent and innovative

Developers at Danfoss VLT Drives have fully adopted modular principles in development as well as design, production and configuration.

Tomorrow's features are developed in parallel using dedicated technology platforms. This allows the development of all elements to take place in parallel, at the same time reducing time to market and ensuring that customers always enjoy the benefits of the latest features.

Rely on the experts

We take responsibility for every element of our products. The fact that we develop and produce our own features, hardware, software, power modules, printed circuit boards, and accessories is your guarantee of reliable products.

Local backup – globally

VLT® motor controllers are operating in applications all over the world and Danfoss VLT Drives' experts located in more than 100 countries are ready to support our customers with application advice and service wherever they may be.

Danfoss VLT Drives experts don't stop until the customer's drive challenges are solved.
